Engineer's Name: Mansour Harbi Ahmed Albahoot
Date of Birth: 11/ 7/ 1965
Nationality: Saudi
E-mail: mhbg777@hotmail.com
Phone: 00966 555773506
Address: Al-Baha Post box 44
Registration Date: 1/ 10/ 2007
Awarding Date: 2019
Degree: Doctor of Philosophy
Department: Irrigation and Hydraulics Department

Supervisors:

Prof. Dr. Sherif M. A. El Didy
Prof. Dr. Hisham Bekhit

Examiners:

Prof. Dr. Sherif M. A. El Didy (Thesis main advisor)
Prof. in Irrigation and Hydraulic Department
Prof. Dr. Kamal Hefny Hussein Hefny (External examiner)
National Water Research center- Ministry of Irrigation
Prof. Dr. Madiha Mostafa Hassan Darwish (External examiner)
National Water Research center- Ministry of Irrigation

Title of Thesis:

Environmental Management of Groundwater Resources in Saudi Arabia, Case Study: Sewage Treatment Plant in Makkah

Key Words: Groundwater- Water treatment- Makkah- Pollution- MODFLOW

Summary:

The mechanics of pollution spread and attenuation including dispersion, convection, sources/ sinks, adsorption, and decay are presented. The equations of three-dimensional solute transport are illustrated. Parametric study has been performed covering the effect of some parameters on spread of contaminants in groundwater. Different methods of remediation of groundwater contamination are demonstrated by numerical simulation. Numerical simulation of different approaches is simulated to stop contamination spread out of sewage treatment plant in Makkah.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in references section

Acknowledgment

I would like to express my deep gratitude to all whom assisted me in the completion of this thesis from professors, colleagues, and family.

I would like to express special gratitude to Prof. Dr. Sherif El-Didy, Prof. of Hydraulics, and Dr Hisham Bekhit in Department of Irrigation and Hydraulics, Faculty of Engineering at Cairo University for his continuous support, advice and skillful guidance to make the completion of this study possible.

Also, Appreciation is given to Prof. Dr. Hisham Bekhit, Department of Irrigation and Hydraulics, Faculty of Engineering at Cairo University for his guidance and fruitful advices.

I would like to express my sincere appreciation to my family for their support, patience and encouragement.

Finally, I ask God to accept this work and effort and make use of them to my society and country.

Acknowledgment	1
Table of Contents	3
List of Tables	7
List of Figures	8
Abstract	13
Chapter One: Introduction	14
2.1. General	14
2.2. Sources and types of ground water contamination	14
2.3. Contamination potential of miscellaneous injection wells	17
2.4. Factors affecting the movement of contaminants to the groundwater	17
2.5. Waste water from Makkah water treatment plant	18
2.6. The dissertation objectives	18
2.7. Methodology	19
2.8. Description of Chapters	19
Chapter Two: Literature Review	20
2.1. Groundwater Flow Models	21
2.2. Mathematical Models	21
2.2.1. Analytical Models	21
2.2.2. Numerical models	22
2.3. Previous Studies	23
2.3.1. Field groundwater pollution studies	23
2.3.2. Modeling groundwater pollution studies	25
Chapter Three: Mechanics of Pollutants Spread in Groundwater	33
3.1. Attenuation of the Pollutants in the Top Soil Layer	33
3.2. Distribution of Contamination in the Saturated Zone	33
3.3. Contamination Transmission	34
3.3.1. Molecular Diffusion	34
3.3.2. Dispersion	35
3.3.3. Advection	38
3.4. Contaminants Attenuation	38

3.4.1. Adsorption.....	38
3.4.2. Radioactive Decay	38
3.4.3. Dilution	39
3.4.4. Filtration.....	39
3.4.5. Buffering	39
3.4.6. Chemical Precipitation	39
3.4.7. Oxidation and Reduction.....	39
3.4.8. Volatilization	40
3.4.9. Biologic-Degradation and Assimilation.....	40
Chapter Four: Equations of Pollutant Transport and The Used Model	41
4.1. Introduction.....	41
4.2. The Governing Equation.....	41
4.3. The Pollutant Concentration	42
4.4. The Used Model.....	46
4.4.1 The Program MT3D	46
4.4.2 Program Description	47
Chapter Five: Parametric Study	48
5.1. Introduction.....	48
5.2. The Hypothetical Region of Study	48
5.3. Longitudinal Dispersivity	50
5.4. Lateral Dispersivity.....	55
5.5. Vertical Dispersivity	55
5.6. Diffusion Coefficient	62
5.7. Hydraulic Conductivity.....	62
5.8. Sorption.....	65
5.9. Decay	65
5.10. Layer of the Contamination Source	70
5.11. Horizontal Dimensions of the Contamination Source	70
5.12. Injection Rate in Wells of Pollution	76
5.13. Concentration of Injected Water in a Well	76
5.14. The Screened Layer in a Well.....	76
5.15. Recharge Rate	80
5.16. Concentration of the Recharged Water.....	80
Chapter Six: Protection against Contaminants	83

6.1. Introduction.....	83
6.2. Summary of the Protection Alternatives.....	83
6.2.1. Containment.....	84
6.2.2. Contaminant Withdrawal	86
6.2.3. In-Situ Treatment of Contaminants.....	87
6.2.4. Management Options	88
Chapter Seven: Numerical Simulation of Some Protection Measures	89
7.1. Introduction.....	89
7.2. Simulation of the Grouting	89
7.2.1. No Grouting	89
7.2.2. Full Depth Grouting	89
7.2.3. Partial Depth Grouting.....	89
7.2.4. Grouting Permeability.....	95
7.2.5. Grouting Thickness.....	97
7.3. Simulation of the Slurry Wall Effect	98
7.4. Simulation of the Hydrodynamic Control Using Injection Wells	101
7.4.1. Effect of the Injection Rate	101
7.4.2. Effect of the Well Depth.....	102
7.4.3. Effect of the Wells Distribution.....	102
7.5. Contaminant Withdrawal by Pumping Wells	106
7.5.1. Pumping Rate.....	106
7.5.2. Well Depth.....	106
7.5.3. Wells Distribution.....	106
Chapter Eight: Remediation of in-Land Wastewater (Case Study: Makkah Treatment Plant).....	111
8.1. Introduction.....	111
8.2. Makkah sewage treatment plant	111
8.2. Geology and soil classification	116
8.3. Analysis of Experiment to Determine the Aquifer Dispersivity.....	120
8.3.1. The experiment setup.....	120
8.3.2. Analysis of Dispersion in Radial Flow	125
8.3.3. Results of the Experiment.....	126
8.3.4. Discussion of the results	126
8.4. Hydrogeological Characteristics of the Aquifer	128

8.4.1. Estimation of Groundwater Recharge from Wastewater Stream.....	128
8.4.2. Precipitation	128
8.4.3. Evaporation	129
8.4.4. Flow Rates	129
8.5. Sampling and Lab Analysis	131
8.6. Numerical Modeling	135
8.6.1. Injection wells with surface recharge	137
8.6.2. Injection wells without surface recharge	139
8.6.3. Discharging Wells with Stopping the Injection Wells and the Surface Recharge	140
8.6.4. Use of Slurry Wall	140
8.6.5. Discharging the plant output in depression to get rid of water by evaporation	142
Chapter Nine: Conclusion and Recommendations	149
9.1. Conclusion	149
9.1.1. The Parametric Study of Pollution Transport	149
9.1.2. The Parametric Study of the Protection Measures	149
9.1.3. Waste Water Treatment Plant in Makkah	150
9.2. Recommendations for future work	150
References	151
