**Evaluation of Different Brucella Antigens with Special
Reference to RB51 Antigen by using the Recent Serological
Techniques**

A Thesis Presented By

Sally Magdy Abd Elsalam Abd Elhamid

B.V.Sc., Faculty of Veterinary Medicine,
Cairo University (2005)

For the Master Degree in

Veterinary Medical Sciences
(Bacteriology, Immunology and Mycology)

Under Supervision of

Prof. Dr. Khaled Farouk Elamry

Prof of Microbiology
Faculty of Veterinary Medicine,
Cairo University

Prof. Dr. Mahmoud Essam Hatem

Prof of Microbiology
Faculty of Veterinary Medicine,
Cairo University

Prof. Dr. Kamal Eldin Hussein

Chief Researcher in Serum and Vaccine Research Institute
Abbassia, Cairo

2015

Supervision sheet:

This thesis is under supervision of:

Prof. Dr. Khaled Farouk ElAmry

Professor of Microbiology, Faculty of Veterinary Medicine,
Cairo University.

Prof. Dr. Mahmoud Essam Hatem

Professor of Microbiology, Faculty of Veterinary Medicine,
Cairo University.

Prof. Dr. Kamal ElDin Huseein

Chief researcher, Veterinary Serum and Vaccine Research
Institute.

Cairo University
Faculty of Veterinary Medicine
Department of microbiology

Name: Sally Magdy Abd Elsalam

Nationality: Egyptian.

Date and place of birth: 4/6/1983, Egypt.

Master Degree Thesis (Bacteriology–Immunology–Mycology) 2015

Thesis Title: Evaluation of Different Brucella Antigens with Special Reference to RB51 Antigen by using the recent serological Techniques

Under Supervision of:

- **Prof. Dr. Khaled Farouk Elamry** Professor of microbiology Faculty of Vet. Med. Cairo University.
- **Prof. Dr. Mahmoud Essam Hatem.** Professor of microbiology Faculty of Vet. Med. Cairo University.
- **Prof. Dr. Kamal Eldin Hussein.** Chief Researcher in Serum and Antigens Department, VSVRI, Abbasia, Cairo.

(Key words: *Brucella abortus* strain RB51, I-ELISA, rough LPS.

Abstract

The live attenuated *Brucella abortus* SRB51 is a partial O-chain-deprived mutant. The relative lack of the polysaccharide prevents it from inducing antibodies detectable by most of the serological tests used for the diagnosis of bovine brucellosis. The performance of three antigens used in an indirect enzyme-linked immunoassay test for detecting SRB51 antibodies were evaluated, *Brucella abortus* strain RB51 hot saline extract, Rough lipopolysaccharide, and sonicated antigens were used. The buffered acidified plate antigen test, Rose Bengal test, Tube agglutination test and an indirect enzyme-linked immunoassay (I-ELISA) using the smooth LPS (SLPS) antigen from *B. abortus* were used as control tests.

A better antigen might be purified rough lipopolysaccharide (RLPS), as fewer epitopes would be shared although the results of HSE coated ELISA plates which were prepared from RB51 strain showed higher positive percentage than LPS and Sonicated coated ELISA plates by comparing the results of different serological tests including RBPT, BAPAT and Tube agglutination test and by statistical analysis using Annova test show significance at ($P \leq 0.05$).

Dedicated

To:

My father

My mother

My husband

My sister

My brother

And

My daughters.

Acknowledgement

*First of all, I wish to thank **ALLAH** for helping me to complete this work and supported me with his blessing and unlimited care.*

*I am deeply grateful to **Prof. Dr. Mahmoud Essam Hatem**, Department of microbiology, Faculty of Veterinary medicine, Cairo University, for his sincere advice and help.*

*Very special thanks to **prof. Dr. Khaled Farouk ElAmry**, prof of Microbiology, Faculty of Veterinary Medicine, Cairo University, for his valuable advices, constructive criticism, cooperation and support during the course of this study under whose stimulating supervision, guidness, this work was carried out.*

*I would also like to express my thanks to **Prof. Dr. Kamal Eldin Hessin**, Professor and ex-head of Department of Serum and Antigens, Serum and Vaccine Research Institute, Abbassia, Cairo, for his valuable guidance and supervision that were the driving force behind the accomplishment of this work.*

*My deep gratitude to **Dr. Waleed Saad**, Researcher in Brucella Unit, Department of Evaluation of Bacterial Vaccines of Large Animals, Central Laboratory for Evaluation of Veterinary Biologics (CLEVB), Abbassia, Cairo for his great help during the practical part.*

*I am much obligated to thank **Dr. Noha Abbas Helmy**, VSVRI, Abbassia, Cairo, who had given me so much of her valuable advice, experience and scientific knowledge.*

I am also grateful to staff members of Serum and Antigens, VSVRI, Abbassia, Cairo and microbiology department of veterinary faculty, Cairo university for giving hand wherever needed and for their help and kindness.

Finally, I would like to express my great thanks to my family for their patience, sacrifice, encouragement and valuable support throughout all phases of this demanding endeavor.
