

# **ASSESSMENT OF AN INTEGRATED PEST MANAGEMENT PROGRAM FOR THE CONTROL OF THE WHITEFLY *BEMISIA TABACI* (GENN.) ON CANTALOUPE CULTIVARS**

A Thesis submitted to the Department of Entomology, Faculty of Science,  
Ain Shams University for the award of the Ph.D. Degree  
Entomology

**By**

**Yomna Nabil Mohamed Abd Allah**

Assistant Researcher - Plant Protection Research Institute  
M.Sc.Zoology (Entomology)-Faculty of Science - Zagazig University

**Supervised by**

**Prof Dr. Bahira Mahmoud El Sawaf**

Emeritus Professor of Entomology - Entomology Department - Faculty of Science-  
Ain Shams University

**Prof Dr. Baraka Mohsen Refaei**

Professor of Entomology- Entomology Department - Faculty of Science - Ain  
Shams University

**Prof Dr. Samia Ahmed Galal Metwally**

Emeritus Chief Researcher- Vegetables, Ornamental, Medicinal and Aromatic Plant  
Pests Research Department- Plant Protection Research Institute.-Agricultural  
Research Center

**Prof Dr. Soad Ali Ibrahim**

Emeritus Chief Researcher- Vegetables, Ornamental, Medicinal and Aromatic Plant  
Pests Research Department- Plant Protection Research Institute.-Agricultural  
Research Center

**(2019)**

## Approval sheet (Ph.D. Thesis)

**Name :** Yomna Nabil Mohamed Abd Allah

**Title:** ASSESSMENT OF AN INTEGRATED PEST MANAGEMENT PROGRAM FOR THE CONTROL OF THE WHITEFLY *BEMISIA TABACI* (GENN.) ON CANTALOUPE CULTIVARS

**Supervisions committee:**

**Prof Dr. Bahira Mahmoud El Sawaf**

Emeritus Professor of Entomology - Entomology Department - Faculty of Science- Ain Shams University

**Prof Dr. Baraka Mohsen Refaei**

Professor of Entomology- Entomology Department - Faculty of Science - Ain Shams University

**Prof Dr. Samia Ahmed Galal Metwally**

Emeritus Chief Researcher - Plant Protection Research Institute.-Agriculture Research Center

**Prof Dr. Soad Ali Ibrahim**

Emeritus Chief Researcher - Plant Protection Research Institute.-Agriculture Research Center

**Examination committee:**

**Prof Dr. Nawal Zohdy Mohamad Zohdy**

Emeritus Professor of Pest Control - Entomology Department - Faculty of Science - Cairo University

**Prof Dr. Monir Mohammed El-Husseini**

Emeritus Professor of Pest Control – Department of Economic Entomology and Pesticides - Faculty of Agriculture – Cairo University

**Prof Dr. Bahira Mahmoud El Sawaf**

Emeritus Professor of Entomology - Entomology Department - Faculty of Science - Ain Shams University

**Prof Dr. Samia Ahmed Galal Metwally**

Emeritus Chief Researcher - Plant Protection Research Institute.- Agriculture Research Center

**2019**

## **Biography**

**Name:** Yomna Nabil Mohamed Abd Allah

**Awarded degrees:**

1- B.SC. (Entomology), Faculty of Science -  
Zagazig University

2- M.Sc. Zoology (Entomology)-Faculty of  
Science - Zagazig University

**Occupation:** Assistant Researcher, Plant Protection  
Research Institute, Agricultural Research Center,  
Dokki, Giza, Egypt

**Department :** Entomology

**College:** Faculty of Science

**University :** Ain Shams University

**Date of graduation :** 2019

**E mail:** Yomnanabil01@gmail.com

**Date of Appointment :** 9-9

**Date of Registration :** 2019

## ***Acknowledgements***

First of all, I would like to thanks "**ALLAH**" **El Ali El Qadeer** to whom I pray to enable me to finish successfully this work, and accomplish succesfull life.

I would like to express my deep appreciation to my supervisor ***Prof. Dr. Bahira Mahmoud El Sawaf***, Professor of Entomology, Entomology Dept., Faculty of Science, Ain Shams University for her keen and close supervision, sincere help, outmost patience, energetic help, illuminating advices, helpful discussion, continuous guidance, being a pillar of support and being patient enough, supporting me throughout the hard times and helping to overcome difficulties throughout the present study.

I am also greatly indebted to ***Prof. Dr. Samia A. Galal Metwally***, Chief Researcher, Vegetables, Ornamental, Medicinal and Aromatic Plant Pests Research Dept., Plant Protection Research Institute, Agricultural Research Center for suggesting the point of the present study, supervision, the scientific valuable criticism, revising manuscript, great help, advice and continuous encouragement throughout the period of this work.

I am deeply indebted with thanks and gratitude to ***Prof. Dr. Baraka Mohsen Refaei*** Professor of Entomology, Entomology Dept., Faculty of Science, Ain Shams University for her sincere help, scientific valuable advices and really care for success of this work. ***Prof. Dr. Baraka***, you have been so much than a supervisor during the most difficult times.

I also, thank ***Prof. Dr. Soad Ali Ibrahim*** Chief Researcher Vegetables, Ornamental, Medicinal and Aromatic Plant Pests Research Dep., Plant Protection Research Institute, Agricultural Research Center for her supervision, helping, assistance, revising manuscript and kind encouragement during the progress of this study.

I express my deepest thanks and gratitude to most esteemed guide **Prof. Dr. Mohamed Abou Setta**, Chief Researcher, Scale Insects and Mealybug Department, Plant Protection Research Institute, ARC for his keen assistance, encouragement, advising me, statistical analysis of the data, providing great help, guidance and sincere care for success of my work.

My deep thanks and gratitude to late **Prof. Dr. Ahmed Kottob**, Chief Researcher, Horticultural Research Institute, ARC for providing cantaloupe seeds and invaluable assistance throughout this work.

I would like to express my deep thanks also to **Prof. Dr. Youssef Ezz-Eldin Youssef Abdallah**, Professor of Economic Entomology, Faculty of Agriculture, Ain- Shams University for his sincere assistance, statistical analysis, encouragement and precious advice during the progress of this study.

My appreciation and grateful is due to **Abdallah Masoud El-Sayed**, Assistant Researcher, Desert Research, Center, ARC for his great help, facilities solutions for many difficulties throughout the period of the work, unconditional support and statistical analysis of the data.

I am grateful to **Dr. Asharaf Said Elhalawany**, Researcher, Fruit trees Acarology, Plant protection Research Institute, ARC for continuous support, sincere help and great effort in statistical analysis of the data.

Deep thanks are also due to **Reda Sebaey**, Assistant Researcher, Plant Protection Research Institute, ARC for his sincere help, and great support during the period of field study in the Experimental Farm at Qaha, Qalyubiya Governorate.

My work would not have been conducted without the help of the staff members of Qaha Farm, for all their assistance throughout the work.

Sincere thanks and gratitude to **Heba Samir Rafea**, Assistant Researcher, Plant Protection Research Institute, ARC for her great support and help in presenting the obtained results is appreciated.

My thanks extend to *Prof. Dr. Hanan Seddiek Abd elaziz*, Chief Researcher, Plant Protection Research Institute, ARC for her great support, knowledge and encouragement, during this work to come out.

Sincere thanks to all the staff members of Vegetables, Ornamentals, Medicinal and Aromatic Plant Pests Research Department, Plant Protection Research Institute, ARC for sincere help, continuous encouragement and great support throughout the period of study.

Deep thanks and gratitude are also extended to all my colleagues in Plant Protection Research Institute, ARC for cooperation, sincere help and continuous encouragement.

**Finally**, deep gratefulness, special thanks and great appreciation to my lovely mother, dear father, brother, sisters, nephews and all my family members.

*Dedicated to  
Allah El Ali El Qadeer*

*followed by*

*my lovely mother, dear father,  
brother, sisters and my nephews*

*Eyad and Aysel*

# LIST OF CONTENTS

Title	Page
<b>ABSTRACT</b>	
<b>1.INTRODUCTION</b>	1
<b>2. LITERATURE REVIEW</b>	7
2.1. Distribution and effect of <i>B. tabaci</i> damage on different cultivated crops	7
2.2. Relative susceptibility of different cantaloupe cultivars and growth stages to infestation with <i>B. tabaci</i> in respect to physiological and morphological traits	8
2.3. Effect of different sowing dates, climatic factors and plant age on <i>B. tabaci</i> infestation	20
2.4. Effect of different rates of inorganic fertilizers on <i>B. tabaci</i> population	27
2.5.Effect of aromatic plants on the population of <i>B. tabaci</i>	29
<b>3. MATERIALS AND METHODS</b>	33
<b>3.1.Field studies</b>	33
3.1.1. Impact of the four tested cultivars on infestation of cantaloupe with the whitefly; <i>B. tabaci</i> and the resultant yield	34
3.1.2. Effect of cantaloupe growth stages on the whitefly; <i>B. tabaci</i> preference	35
3.1.3.Interaction between different sowing dates and cantaloupe cultivars on the whitefly; <i>B. tabaci</i> and the resultant yield	36
3.1.4. Interaction between different sowing dates, certain weather variables and plant age on the whitefly, <i>B. tabaci</i> activity	37
3.1.5. Effect of different rates of inorganic fertilizers on <i>B. tabaci</i> infestation and the resultant yield	37
3.1.6. Intercropping cantaloupe with certain non-host aromatic plants	39
<b>3.2. Laboratory studies</b>	43
3.2.1.Morphological aspects as shown by scanning electron micrographs	43
3.2.1.1.Morphological features in respect to trichome analysis; leaf trichomes density and length	43
3.2.1.2. Morphological aspects in respect to leaf stomata density and dimensions	44
3.2.2. Physiological studies	45
3.2.2.1.Chemical analysis of the four tested cultivars to determine certain biochemical elements and moisture content	45
3.2.2.2. Chemical analysis of the four cultivars to determine certain enzymes	51

<b>3.3. Meteorological data</b>	54
<b>3.4. Data analysis</b>	54
<b>4. RESULTS</b>	56
4.1. Assessment the performance of cantaloupe cultivars under <i>B. tabaci</i> attack	56
4.1.1. Preference of cultivars for oviposition over 2015	56
4.1.2. Preference of cultivars for nymphal infestation over 2015	57
4.1. 3. Preference of cultivars for oviposition over 2016	59
4.1.4. Preference of cultivars for nymphal infestation over 2016	60
4.1.5. Preference of cultivars for oviposition over 2017	62
4.1.6. Preference of cultivars for nymphal infestation over 2017	63
4.1.7. Preference of cultivars for oviposition and nymphal infestation over the three studied seasons	65
4.1.8 Effect of infestation rates on the resultant yield	66
4.2. Effect of cantaloupe growth stages on the whitefly; <i>B. tabaci</i> preference	69
4.2.1. Difference between the four cantaloupe cultivars in early and late stages in relation to oviposition preference	69
4.2.2. Difference between the four cantaloupe cultivars in early and late stages in relation to nymphal infestation.	70
4.2.3. Preference of cantaloupe stages for oviposition and nymphal infestation	72
a. Preference of stages for oviposition	72
b. Preference of stages for nymphal infestation	72
4.3. <i>B. tabaci</i> infestation in relation to morphological aspects and biochemical constitutes of cantaloupe cultivars	73
4.3.1.Morphological characters as shown by scanning electron microscope (SEM)	73
4.3.1.1. Effect of leaf trichomes density and length in cantaloupe cultivars on laying <i>B. tabaci</i> eggs in the early stage	74

4.3.1.2. Effect of leaf trichomes density and length in cantaloupe cultivars on laying <i>B. tabaci</i> eggs in the late stage	78
4.3.1.3. Oviposition preference in relation to trichomes in cantaloupe early and late stages	82
4.3.1.4. Leaf stomata in cantaloupe cultivars	83
4.3.2. Leaf chemical compositions, moisture content and enzymes in cantaloupe cultivars and <i>B. tabaci</i> infestation	92
4.3.2.1. Biochemical elements and moisture contents in the tested cultivars in cantaloupe early and late stages	92
a.Total protein	92
b. Total carbohydrates	93
c. Moisture content	94
d. Reduced sugars	95
e. Non-reducing sugars	96
f. Total sugars	97
g. Potassium	98
h. Phosphorous	99
i. Total phenols	100
4.3.2.2. Enzymes activity in the tested cultivars in cantaloupe early and late stages	101
a. Alpha-esterases	101
b. Phenoloxidase	102
c. Peroxidase	103
4.3.2.3.Correlation between biochemical elements and nymph infestation in cantaloupe early and late stages	105
4.3.2.4.Correlation between biochemical elements, moisture content and enzymes activity and nymphs infesting the four cantaloupe cultivars	107
4.3.2.5. The role of tannin in relative resistance of cantaloupe cultivars against <i>B. tabaci</i> infestation	110
4.4. Interaction effect of cantaloupe cultivars and sowing date on <i>B. tabaci</i> infestations and yield parameters	111
4.4.1. Oviposition preference of <i>B. tabaci</i> in relation to cantaloupe sowing date and cultivars over three seasons	111
4.4.2. Nymphal infestation of <i>B. tabaci</i> in relation to cantaloupe sowing date and cultivars over three seasons	117
4.4.3. Interaction between cantaloupe cultivars and sowing date on the resultant yield	123

4.5. Interaction between certain weather factors and plant age on <i>B. tabaci</i> infestation	125
4.5.1. Effect of weather factors and plant age on deposited <i>B. tabaci</i> eggs in different sowing dates	125
4.5.2. Effect of weather factors and plant age on nymphal activity in different sowing dates	136
4.6. <i>B. tabaci</i> infestation and yield production in relation to inorganic fertilization (NK)	143
4.6.1. Effect of different inorganic fertilization rates on nymphal infestation	143
4.6.2. Effect of the combination of inorganic fertilizer rates on cantaloupe yield	147
4.7. Reducing <i>B. tabaci</i> infestations using intercropping with three non- host aromatic plants	149
4.7.1. Effect of intercropping cantaloupe on <i>B. tabaci</i> oviposition preference	149
4.7.2. Effect of intercropping cantaloupe on <i>B. tabaci</i> nymphal infestation	151
<b>5. DISCUSSION</b>	154
<b>CONCLUSIONS AND RECOMMENDATIONS</b>	169
<b>6. SUMMARY</b>	172
<b>7. REFERENCES</b>	182
<b>ARABIC SUMMARY</b>	

## LIST OF TABLES

No.	Title	Page
1	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf of four cantaloupe cultivars in the field over 2015 summer plantation season.	58
2	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf of four cantaloupe cultivars in the field over 2016 summer plantation season.	61
3	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf of four cantaloupe cultivars in the field over 2017 summer plantation season.	64
4	Effect of <i>B. tabaci</i> infestation on the resultant yield of the four cantaloupe cultivars over 2015.	67
5	Mean numbers of stomata/1mm <sup>2</sup> and dimensions (length and width) ( $\mu$ m) of cantaloupe cultivars in relation to mean $\pm$ SE of <i>B. tabaci</i> egg numbers in the early stage over 2019 summer plantation.	85
6	Correlation between biochemical components and nymphal infestation in cantaloupe early and late stages.	106
7	Correlation between enzymes activity and nymphal infestation in cantaloupe early and late stages.	106
8	Correlation coefficient (r) between certain leaf chemical compositions, moisture content and enzymes in leaves of four cantaloupe cultivars and mean count of <i>B. tabaci</i> nymphs in 2016.	109
9	<i>B. tabaci</i> mean number of eggs/leaf on different cultivars over three summer plantation sowing dates (2015).	112
10	<i>B. tabaci</i> mean number of eggs/leaf on different cultivars over three summer plantation sowing dates (2016).	113
11	<i>B. tabaci</i> mean number of eggs/leaf on different cultivars over three summer plantation sowing dates (2017).	114
12	Average of <i>B. tabaci</i> eggs/leaf on the four cultivars over 2015, 2016 and 2017 three summer plantation sowing dates.	116
13	<i>B. tabaci</i> mean number of nymphs/leaf on different cultivars over three summer plantation sowing dates (2015).	117
14	<i>B. tabaci</i> mean number of nymphs/leaf on different cultivars over three summer plantation sowing dates (2016).	119

15	<i>B. tabaci</i> mean number of nymphs/leaf on different cultivars over three summer plantation sowing dates (2017)	120
16	Average of <i>B. tabaci</i> nymphs/leaf on different cultivars over 2015, 2016 and 2017 three summer plantation sowing dates.	122
17	Mean of yield production (kg) per plot of cantaloupe cultivars over three summer plantation sowing dates (2015) .	124
18	Mean values of temperatures and relative humidity registered in the weeks of sampling of <i>B. tabaci</i> eggs or nymphs on cantaloupe in the three sowing dates over 2015 summer plantation season in Qaha, Qalyubiya Governorate.	130
19	Multiple regression of abiotic factors and plant age on <i>B. tabaci</i> egg numbers in different sowing dates over 2015.	131
20	Mean values of temperatures and relative humidity registered in the weeks of sampling of <i>B. tabaci</i> eggs or nymphs on cantaloupe in the three sowing dates over 2016 summer plantation season in Qaha, Qalyubiya Governorate.	132
21	Multiple regression of abiotic factors and plant age on <i>B. tabaci</i> egg numbers in different sowing dates over 2016.	133
22	Mean values of temperatures and relative humidity registered in the weeks of sampling of <i>B. tabaci</i> eggs or nymphs on cantaloupe cultivars in the three sowing dates over 2017 summer plantation season in Qaha, Qalyubiya Governorate	134
23	Multiple regression of abiotic factors and plant age on <i>B. tabaci</i> egg numbers in different sowing dates over 2017.	135
24	Multiple regression of abiotic factors and plant age on <i>B. tabaci</i> nymphal infestation in different sowing dates over 2015.	140
25	Multiple regression of certain abiotic factors and plant age on <i>B. tabaci</i> nymphal infestation over 2016 summer plantation season.	141
26	Multiple regression of abiotic factors and plant age on <i>B. tabaci</i> nymphal infestation over 2017 summer plantation season.	142

## LIST OF FIGURES

No.	Title	Page
1	Display distribution of whitefly; <i>B. tabaci</i> world wide.	8
2	The four tested cantaloupe cultivars.	35
3	Intercropping of cantaloupe with aromatic plants.	42
4	Scanning Electron Microscope Model Quanta 250 FEGF.	44
5	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf on the four cantaloupe cultivars over 2015 summer plantation season.	59
6	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf in the four cultivars over 2016 summer plantation season.	62
7	Mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf in the four cantaloupe cultivars over 2017 summer plantation season.	65
8	Average mean numbers ( $\pm$ SE) of <i>B. tabaci</i> eggs and nymphs per leaf on the four cantaloupe cultivars over summer plantation season of 2015, 2016 and 2017.	66
9	Weight of cantaloupe fruits of the tested cultivars over 2015 summer plantation season.	68
10	Correlation between mean number of <i>B. tabaci</i> eggs and nymphs and cantaloupe weight over 2015.	68
11	Difference between the four cultivars in early and late stages in relation to oviposition preference over 2015, 2016 and 2017.	70
12	Difference between the four cultivars in early and late stages in relation to nymphal infestation over 2015, 2016 and 2017.	71
13	Mean number of <i>B. tabaci</i> eggs and nymphs in early and late cantaloupe stages over 2015, 2016 and 2017.	73
14	Correlation between mean number of trichomes/1 mm <sup>2</sup> and eggs on Arava, Majus, Darvina and Royal 481 cultivars in the early stage.	75
15	Correlation between mean trichomes length ( $\mu$ m) and eggs on Arava, Majus, Darvina and Royal 481 cultivars in the early stage.	75
16	Scanning electron micrographs of cantaloupe leaf showing trichomes density and length in Arava cultivar during the early stage.	76
17	Scanning electron micrographs of cantaloupe leaf showing trichomes density and length in Majus cultivar during the early stage.	76
18	Scanning electron micrographs of cantaloupe leaf showing trichomes density and length in Darvina cultivar during the early stage.	77
