**ASSESSMENT OF ROCK FALL PROTECTION  
MEASURES WITH APPLICATION ON  
UMM EL-SEED PLATEAU IN SHARM EL-SHEIKH  
IN EGYPT**

Thesis

Submitted in Partial Fulfillment of the  
Requirements for the Degree of  
**MASTER OF SCIENCE**

In  
CIVIL ENGINEERING  
STRUCTURAL ENGINEERING DEPARTMENT

By

**Ahmed Hossam Fikry Labib**

**Prof. Dr. Farouk I. EL-Kadi**  
Professor of Geotechnical Engineering  
Engineering  
Structural Department  
Faculty of Engineering  
Ain Shams University

Supervised by

**Dr. Hesham Mohamed Helmy**  
Associate Professor of Geotechnical  
Engineering  
Structural Department  
Faculty of Engineering  
Ain Shams University

**Dr. Mohamed Maher Tawfik**

Assistant Professor of  
Geotechnical Engineering  
Structural Department  
Faculty of Engineering  
Ain Shams University  
Cairo – 2019

# CURRICULUM VITAE

---

<b>Name</b>	Ahmed Hossam Fikry Labib
<b>Date of Birth</b>	03, June 1991
<b>Place of Birth</b>	Cairo, Egypt
<b>Nationality</b>	Egyptian
<b>Scientific degree</b>	BSc. of Structural Engineering, Faculty of Engineering, Ain Shams University, 2013
<b>Current Job</b>	Demonstrator of Geotechnical Engineering and Foundations, Structural Engineering Department, Faculty of Engineering, Ain Shams University

# STATEMENT

---

This thesis is submitted to Ain Shams University for the degree of M.Sc. in Civil Engineering.

The work included in this thesis was carried out by the author at the Department of Structural Engineering, Faculty of Engineering, Ain Shams University, Cairo, Egypt.

No part of this thesis has been submitted for a degree or a qualification at any other University or Institution.

Name: Ahmed Hossam Fikry Labib

Signature:

Date: 30 / 07 / 2019

## ACKNOWLEDGMENT

---

First and foremost, thanks to GOD for his many graces and blessings.

I wish to express my deepest gratitude and appreciation to Dr. Farouk I. EL-Kadi, Professor of Geotechnical engineering, Structural Department, Faculty of Engineering, Ain Shams University for his patience, help, guidance, useful suggestions, dedication and encouragement kind supervision.

My grateful appreciation also extends to Dr. Hesham Mohamed Helmy, Associate Professor of Geotechnical engineering, Faculty of Engineering, Ain Shams University and Dr. Mohamed Maher Tawfik, Assistant Professor of Geotechnical engineering, Structural Department, Faculty of Engineering, Ain Shams University for the fruitful comments and valuable advice throughout this research till it is completion which is gratefully acknowledged and sincerely appreciated.

Most important, my deepest thanks and love for my father, mother and brother. Your constant and everlasting support is the reason of being able to finish this research.

Last but certainly not least, I would like to thank my gorgeous wife for her support and patience through the ups and downs, the sleepless nights and hard times throughout this long but rewarding journey.

## ABSTRACT

---

A potentially unstable rock face may cause a catastrophic disaster, damage to property and loss of life every year across the globe. Slope failure and rock fall one of the major geohazards that can be triggered by earthquakes, volcanic eruptions, heavy rain fall or indeed by human activities.

Umm El Seed plateau is overlooking the Gulf of Aqaba. It is bounded from the west by Sharm El Maya and from the east by Marsa Menaisel. It is about 3.5 km<sup>2</sup> in area. The average height of the plateau is 10 to 30 m above sea level and has generally gentle slope about 50 toward the south. Most sides of the plateau have nearly vertical side slope (scarps) facing the seaside. The geological formation mainly consist of a hard reefal Limestone unit is underlying with relatively fine sandstone unit. The plateau is a high-risk area for major rock fall events. The plateau is occupied and surrounded by several tourist resorts and hotels. It has been found that the plateau is affected by tectonic and non-tectonic structures. The tectonic structures are those formed by stresses inside the earth's crust such as folds, faults and joints, which is mainly controlled by the seismicity of the region indicates that the Gulf of Aqaba has been the most active segment of the plate boundary between Arabian and Sinai plates. Since 1983, the Gulf region was affected by four major earthquakes sequences. The largest shock had a magnitude of 5 Richter seismic magnitude scale. It's classified as 5th degree region according to Egyptian code which is the most critical region subjected to earth quack. The non-tectonic structures on the other hand are produced by external or surface process, such as, weathering, erosion and gravity forces which mainly controlled by the effect of deferential erosion (undercut) of the underneath sandstone unit which cause the movement of limestone blocks leading too rock fall. This research will discuss the rock stability and

the execution of appropriate remedial measures often hampered by constraints in data collection and equipment access

**Keywords:** Jointed rock, Umm El Seed, remedial measures.

# TABLE OF CONTENTS

---

CURRICULUM VITAE .....	iv
STATEMENT .....	v
ACKNOWLEDGMENT .....	vi
ABSTRACT .....	vii
TABLE OF CONTENTS .....	ix
LIST OF FIGURES .....	xiii
NOMENCLATURE .....	xvi
Chapter (1): Introduction .....	1
1.1    General .....	1
1.2    Statement of the problem.....	2
1.3    Research scope and objectives .....	2
1.4    Thesis Outline .....	3
Chapter (2): LITERATURE REVIEW .....	5
2.1    General .....	5
2.2    Structure Geology Boundaries .....	6
2.3    Characteristics of Rock Mass (Intact and Discontinuity).....	11
2.3.1    Mechanical properties of intact rock .....	11
2.4    Stereographic analysis of structural geology .....	30

2.5	Modes of Failure .....	35
2.6	Rock Mass Rating (RMR) .....	37
2.7	Slope Mass Rating (SMR).....	44
2.8	Stability assessments.....	47
2.8.1	Rock material description.....	47
2.8.2	Discontinuity description .....	55
2.8.3	Infilling description.....	57
2.8.4	Rock mass description .....	58
2.8.5	Ground water .....	61
2.9	Remedial Measures.....	62
2.9.1	Stabilization measures .....	62
2.9.2	Protection measures .....	68
2.9.3	Ditches.....	68
2.9.4	Mesh.....	69
2.9.5	Rock fences.....	69
2.9.6	Warning fences.....	70
2.9.7	Rock sheds and tunnels.....	70

Chapter (3): Umm EL-Seed Plateau Location and Geological and Geotechnical characteristics .....	72
---	----

3.1	General .....	72
3.2	Location .....	72
3.3	Topography .....	73
3.4	Geological Units .....	74
3.5	Geological Structural Faults .....	75
3.6	Geological Structural Joints.....	76
3.7	Geological profiles.....	79
3.8	Geotechnical Engineering Parameters of Rock Units.....	86
3.9	Geomechanical Parameters of the Rock Mass.....	88
Chapter (4): Instability Analysis of Umm El Seed Plateau.....		89
4.1	General .....	89
4.2	Proposed failure Mechanisms.....	89
4.3	Applying the Kinematic analysis for Risk Assessment of joints to investigate failure mechanism (I) .....	92
4.4	Applying the numerical analysis to investigate failure mechanisms (II and III) .....	97
4.4.1	Instability Mechanism (II).....	97
4.4.2	Instability Mechanism (III).....	102
Chapter (5): Stability and Protection Measures.....		109
5.1	General .....	109

5.2	Short-term and Long-term Analysis .....	110
5.3	Stabilization using Reinforcement Technique.....	112
5.4	Stabilization using Rock Removal Technique .....	116
Chapter (6): SUMMARY, CONCLUSIONS AND RECOMMENDATIONS .....		119
6.1	Summary .....	119
6.2	Conclusions.....	120
6.3	Recommendations for Future Studies .....	121
References .....		123
Appendix .....		129
