INTRODUCTION
AND
AIM OF THE WORK

INTRODUCTION AND AIM OF THE WORK

Medicine and law have been related from the earliest times. The bonds which first united them were religion, superstition and magic which are so inextricably mixed by primitive peoples. The science of medicine and law is important to serve the human being. The purpose of medicine is to maintain the patient in the best health, to overcome his diseases and injuries and to lengthen his life span. The purpose of law is to maintain peace and order in the community of clients through human rights and to provide equality of opportunity. To achieve these purposes medicine emerges from the laboratory by the scientific process, law emerges from the community by the process of experience (Camps, et al., 1976).

Law doesn't achieve its purpose of equality of opportunity, order, and peace without help or the aid of medical service. A matter that could be represented by a great building with dark rooms. These rooms can not be lightened without the aid of medicine. Forensic medicine or what is called more commonly legal medicine is the link between medicine and law. It is not a branch of medical speciality rather than the application of medical and premedical knowledge for elucidation of medical matters in front of court. Thus legal medicine is a very important tool to serve man as a whole. No body can deny that, progress of nations can be measured by the level of operating medico-legal system. From the available literatures there is no uniformity of medico-legal systems whether in teaching function or the practical application of medico-legal services. Therefore this work has been carried to study and to evaluate:

- 1- The medico-legal system and services in Egypt.
- 2- The interrelationship between the educational and practical services in Egypt.
- 3- Crystallize an ideal or at least proper medico-legal system for Egypt.
