**INFLUENCE OF THE MICROSTRUCTURE AND THE
GRAIN BOUNDARY PRECIPITATES ON THE
BEHAVIOUR OF PH-AUSTENITIC STAINLESS STEEL
IN COMPARISON WITH Ni-BASE SUPERALLOY
DURING HIGH TEMPERATURE CREEP**

by
Amer Eid Ali Amer
B.Sc, M.Sc, Mech.Eng.,

**A Thesis Submitted to the
Faculty of Engineering at Cairo University
in Partial Fulfillment of the
Requirements for the Degree of
DOCTOR OF PHILOSOPHY
in
MECHANICAL DESIGN AND PRODUCTION ENGINEERING**

**FACULTY OF ENGINEERING, CAIRO UNIVERSITY
GIZA, EGYPT
June 2004**

**INFLUENCE OF THE MICROSTRUCTURE AND THE
GRAIN BOUNDARY PRECIPITATES ON THE
BEHAVIOUR OF PH-AUSTENITIC STAINLESS STEEL
IN COMPARISON WITH Ni-BASE SUPERALLOY
DURING HIGH TEMPERATURE CREEP**

By

Amer Eid Ali Amer
B.Sc, M.Sc, Mech.Eng.,

**A Thesis Submitted to the
Faculty of Engineering at Cairo University
in Partial Fulfillment of the
Requirements for the Degree of
DOCTOR OF PHILOSOPHY
in
MECHANICAL DESIGN AND PRODUCTION ENGINEERING**

Under the Supervision of

Prof. Dr. Y.S.SHASH
Prof. Dr. in Mechanical Design
and Production Engineering Dept.
Faculty of Engineering
Cairo - University

Prof. Dr. S.A.EL GHAZALY
Prof. Dr. in Steel Technology Dept.
Central Metallurgical Research and
Development Institute CMRDI
Helwan - Cairo

LIST OF TABLES	V
LIST OF FIGURES	VI
LIST OF SYMBOLS AND ABBREVIATIONS	
DEDICATIONS	XIII
ACKNOWLEDGMENTS	XIV
ABSTRACT	XV
1. INTRODUCTORY	1
2. LITERATURE SURVEY	3
2.1 High Temperature Creep	3
2.2 Strengthening mechanisms of Superalloys	9
2.2.1 Solid solution hardening	11
2.2.2 Precipitation hardening	11
2.2.3 Dispersion hardening	15
2.2.4 Influence of grain size and grain boundaries	16
2.2.5 Cold deformation as a factor affecting the mechanical properties	19
2.2.6 strengthening by dislocation	21
2.3 Influence of stacking fault energy on the mechanical behavior	22
2.4 Basic sources of creep strength in metallic alloys	23
2.5 Grain boundary sliding in metals	25
2.5.1 Metallographic observations about the grain boundary sliding phenomenon	25
2.5.2 Theories of macroscopic sliding	27
2.6 Effect of substructure on creep	27
2.7 Precipitation in Creep resistant austenitic stainless steels	30
2.7.1 Carbides and Nitrides –MX precipitates	30
2.7.2 Z-Phase	33
2.7.3 $M_{23}C_6$ Carbide	34
2.7.4 M_6C Carbide	38
2.7.5 Intermetallic Phases	39

2.7.5.1 σ -Phase	39
2.7.5.2 Laves Phase	42
2.7.5.3 χ - Phase	43
2.7.5.4 G-Phase	43
2.7.5.5 γ' , Ni_3Ti and related precipitates	45
3. EXPERIMENTAL PROCEDURES	
3.1 Materials	47
3.2 Heat treatments	47
3.3 Creep Experiments & Testing equipment	48
3.4 Microstructures investigation equipments	52
3.4.1 Light Microscopy	52
3.4.2 Transmission Electron Microscopy TEM	52
3.4.3 Scanning Electron Microscopy SEM with EDX analysis	53
4. RESULTS AND DISCUSSIONS	
4.1 Microstructure investigation	54
4.1.1 Microstructures of investigated Material PH- austenitic steel (A-286)	54
4.1.2 Microstructure investigation of the PH- Nickel base superalloy Nimonic-263	60
4.2 Emphasizing of Grain boundaries, Subgrains, and Dislocation by TEM	63
4.2.1 Microstructural investigation for PH austenitic stainless steel (A-286) before creep test	63
4.2.2 Microstructural investigation for PH austenitic stainless steel (A-286) after creep test	66
4.2.3 Microstructural investigation for Nickel-base superalloy (Nimonic-263) before creep test	78
4.2.4 Microstructural investigation for Nickel-base superalloy (Nimonic-263)	83

after creep test	
4.3 Creep Curves	86
4.3.1 PH austenitic stainless steel	86
4.3.2 Influence of increasing test temperature on the different regimes of creep curves	87
4.3.3 Nickel-Base superalloy	87
4.4 Fracture analysis of tested alloys	91
4.4.1 Fractography of PH austenitic stainless steel	91
4.4.2 Fractography of PH austenitic stainless steel subjected to Laser Beam (LBS)	91
4.4.3 Influence of increasing test temperature on fractography	99
4.4.3a Fe – PH austenitic stainless steel	99
4.4.3b Fractography of PH austenitic stainless steel subjected to Laser Beam (LBS)	99
4.4.4 Fractography of Nickel-base superalloy	102
-CONCLUSIONS	107
-REFERENCES	109
-APPENDIX	116
