Engineer's Name: Mohammed Ishaq Shah
Date of Birth: 10/03/1989
Nationality: Afghanistan
E-mail: Ishaq_90@yahoo.com
Phone: 01024953389
Address: 6Th of October city
Registration Date: 1/10/2017
Awarding Date:/....../.....
Degree: Master of Science.
Department:

Supervisors:

Prof .Dr. Hany Ahmed Ali Abdalla
Dr. Khaled Farouk El-Kashif

Examiners:

Prof .Dr. Hany Ahmed Ali Abdalla (Thesis Advisor)
Prof. Dr. Hamed Salem Hadhoud (Internal examiner)
Prof. Dr. Ahmed Ali Hussan (External examiner)
Professor, building materials research and quality control
institute ,National center for housing and building research

Title of Thesis: **The Linear and Nonlinear Behavior of Mid- Rise Combined Concrete Buildings Under the Influence of Lateral Loads.**

Key Words:

Mid-rise building behavior , time period, maximum Displacement , linear and non linear

Summary:

Estimating of time vibration is an essential step in the design of earthquake loads, the current codes of the design contains equations to calculate the time period, which depends on height of structure and the building material , so this thesis study the behavior of the building and the time period for mid-rise combined buildings which contains shear walls and frames using Etabs 16.2.1 to perform eigenvalue analysis , with the consideration of the following : height of structure, length to width ratio, vertical element size , load increment ratio by to ways linear and nonlinear. Comparison has been done between code formulas and programme results, depend on these results an analytical relation has done to suggest equations for estimating time period, these equations will allow design engineers the ability to estimate time period value accurately and quickly.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Acknowledgments

I would first like to thank my thesis advisors **Prof. Dr. Hany Abdalla**, Professor of Reinforced Concrete Structures at Faculty of Engineering, Cairo University, and **Dr. Khaled El Kashif**, Assistant Professor, Structural Engineering Department at Faculty of Engineering, Cairo University.

The door to their office was always open whenever I ran into a trouble spot or had a question about my research or writing. They consistently allowed this paper to be my own work, but steered me in the right the direction whenever he thought I needed it.

Finally, I must express my profound gratitude to my parents for providing me with unfailing support and continuous encouragement throughout my years of study and through the process of researching and writing this thesis. This accomplishment would not have been possible without them. Thank you.
