## **Abstract**

**Research title:** The Effect of Using Problem-based Learning Approach on Developing EFL Writing Skills among Students with Learning Disabilities in Primary Stage

**Author:** Aya Mohamed Gadelmawla Mohamed

**Advisors:**

Dr. Asmaa Ghanem Gheith, professor of curriculum and instruction department (TEFL), Faculty of Education, Ain Shams University.

Dr. Mohamed Abdou Hussein, lecturer of special education (Learning disabilities), Faculty of Education, Ain Shams University.

**Source:** Faculty of Education, Ain Shams University.

**Abstract:** The study aimed to examine the effect of using Problem-based Learning (PBL) on developing EFL writing skills among students with learning disabilities in the 5<sup>th</sup> year at the primary stage. The study begins with a review of literature and previous studies dealing with Problem-based Learning and writing skills. A list of writing skills was prepared as a guide for the design of the instruments. The researcher designed a pre/post writing skills test and a rubric for learners with writing disabilities. The researcher also designed the proposed program. Participants were a group of students with learning disabilities in writing (n= 30) to get involved in its activities. Participants were submitted to a pre and posttest. Then, the scores were analyzed quantitatively. The results showed that PBL was highly effective in developing target writing skills of the participants.

**Keywords:** Problem-based Learning, writing skills, learning disabilities, reinforcement, Experimental method.

قال تعالى:

وَقُلْ اَعْمَلُوا فَسَيَرَى اللّٰهُ عَمَلَكُمْ وَرَسُولُهُ  
وَالْمُؤْمِنُونَ ۖ وَسَتُرَدُّونَ اِلَىٰ عَالِمِ الْغَيْبِ  
وَالشَّهَادَةِ فَيُنَبِّئُكُمْ بِمَا كُنْتُمْ تَعْمَلُونَ

سورة التوبة، الآية (١٠٥)

## **Acknowledgements**

Thanks are first due to Allah. I express my sincere appreciation to all who offered the assistance that made the completion of this study possible. I would especially like to express my deepest gratitude to my supervisors: I express very special thanks to Prof. Asmaa Gheith to whom I am indebted for her time, encouragement, constant support and feedback. She was always ready to devote much of her time to reading this thesis, giving remarks on the study and careful direction with limitless patience. Thanks are also due to my supervisor, Dr. Mohamed Abdou Hussein who gave me tremendous support, particularly in the Learning Disabilities field, he was always there to offer help and sincere advice. Thanks for their mentorship, supervision, and guidance.

My sincere gratitude and love are to my mother and father, without their financial and emotional support, my study could have still been an impossible dream. I am also grateful to my brothers Dr. Ahmed and Mr. Ayman and my sisters Asmaa and Dina, to my husband Ehab and my beloved daughters Sondos and Sagda, I really thank them for always encouraging me.

Finally, I also thank my friends who have given me emotional support and encouragement during this time. I am forever indebted to all those who have helped me. Thanks a lot for all of them.

## **Background and Problem**

### **Introduction**

Writing skills are one of the main communication and expressing tools for students to evaluate their performance in a written context. Learners depend on writing skills in many of their life treatments, activities, and tests. Although teachers depend on writing skills to determine the students' level in acquiring knowledge through written expression.

Writing is a common mode of communicating and demonstrating knowledge (Rouhani, Nafchi, & Ziaee, 2016). Among the first things that children learn to write are the alphabet letters and their first names; they then use those letters to spell simple words and eventually string words together to form sentences (Puranik, et al., 2018).

Also, written expression is an essential skill the learner should have to actively function in today's society (Corkett & Benevides, 2016), the elements of written expression require a set of complicated abilities that go beyond the act of holding a pencil and putting words on paper and encompass the complex interaction among physical, cognitive, and sensory systems (Coffin, et al., 2016).

Mastering of handwriting is also essential for children that it is important to try to find new methods for facilitating its learning and rehabilitation (Danna, & Velay, 2015), handwriting is involved in most of the assignments of the teachers, the neat and clean handwriting is a demand of teachers and parents, it considers the reflection of intellect, because of their good handwriting, students are considered shining by the examiners and teachers as well (Jameel & Nabeel, 2016).

Despite the importance of writing, some students have learning disabilities in writing; learning disabilities have spread to all levels of education. We can observe learning disabilities in Kindergarten (Gottfried, 2017); Primary school (Dennis, Sorrells & Falcomata, 2016, Ok & Bryant, 2016), Middle school and High school (Brown, & Cinamon, 2016), and in the university (Harkin, Doyle & Mc Guckin, 2015).

The act of writing presents difficulties for 10–30% of elementary school students (Rosenblum, Weiss & Parush, 2004). For many learners, especially those with a learning disability (LD), writing can be a source of frustration (Corkett & Benevides, 2016), also, many students with LD experience difficulties mastering the process of writing (Graham, Harris, & Larsen, 2001).

There are diverse social problems experienced by children, adolescents, and adults with learning disabilities (Wong & Donahue, 2002). Study findings by King'endo, & Nyaga (2015) reveals that 75 percent of teachers lack instructional materials that cater for learning disabilities (LD). Only 25 percent of teachers can identify cases of LD and give special attention. Lack of standardized tools for assessment at the EARC center may have led to poor identification and placement of LD. The researcher concluded that learning of the learners with dysgraphia (dysgraphia is a term used to refer to writing disabilities) is inadequate and this has been contributed by; lack of enough teachers trained in LD to identify learners with dysgraphia and apply appropriate teaching strategies, inadequate instructional materials that cater for LD and lack of standardized tools for assessment at the EARC center. The study recommends that the Ministry of Education should oversee special education training to all education officers and teachers.

Furthermore, indicated that boys in primary schools had the highest percentage of poorly written work, eligible handwriting, and poor pencil control. Both boys and girls had an equal number in inconsistency in letter formation 121 and in messy written work. Girls with difficulties in inaccurate copying written work were more than boys. The results showed that all the head teachers interviewed agreed with the presence of learners with dysgraphia in their schools (King'endo, & Nyaga, 2015).

Students with specific learning disabilities (SLD) have disparate neuropsychological processing deficits that interfere with academic achievement in writing fluency, spelling, and/or written expression (WE). Although there are multiple potential causes of written expression learning disabilities, there is a paucity of research exploring this academic ability from a neuropsychological perspective (Fenwick, et al., 2016).

Because of the problems that learning disabilities may cause and the negative effects on children writing, several studies had addressed writing
