Prof. Dr. Noha M. Salem (Advisor)

Title of Thesis:

Computer Modeling for Dendritic Construction and Connectivity of Neural Cells

Keywords:

Dendritic morphology; Neuron growth; Neural Network connectivity

Summary:

A computational stochastic model that describes the growth of neuronal dendrites in a single nerve cell and within neural network; the model supplies the ability to study different growth factors like randomized growth, position of stimulus directing dendrites and borders of spanning dendritic tree, as well as a full understanding of network connectivity. Quantitative metrics are calculated to verify the model outputs to realistic constructions like dimensional and electrical metrics. The outputs show that the model is considered to be reliable for discipline types of nerve cells.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Dedication

This first-fruit work is dedicated to my father, Prof. Dr. Ahmed Mahmoud Abbass (RIP), the great man who planted in me the passion of love to science and exploration. He taught me how to discover my way in the right field. He also taught me the scientific ethics as he used to be hard working, very helpful and humble to his students.

Acknowledgments

In the name of Allah, the most merciful, the most gracious; all thanks to Allah the Lord of the Heavens and Earth and peace be upon Prophet Muhammed and his companions.

First and foremost, I would like to express my deepest gratitude and indebtedness to my academic supervisors: Prof. Dr. Medhat El-Messiery, Dr. Amr Sharawi and Prof. Dr. Noha Salem. It has been a pleasure to work with them and learn from such extraordinary advisors. They were always very helpful and never hesitated to lend me their time and knowledge.

I am indebted to Prof. Medhat El-Messiery for his guidance and mentoring. He constantly provided me with new research ideas and helped me to gather a lot of information about neuroscience. He was always pushing me forward and his insight and invaluable advises - not only in scientific research, but also in other aspects of life - have great impacts on me.

I owe Dr. Amr Sharawi valuable supervision, continuous encouragement, useful suggestions and active help during this work. He was never late to help, and he made my research possible. I learned from Dr. Amr a lot from all courses he taught me (under- and post-graduate courses), I was able to build strong knowledge of modeling and use this science conveniently in this research.

I am very thankful to Prof. Noha for her invaluable experience and knowledge that I have gained from her. Her enthusiasm and passion to our work have always motivated me to work harder. I benefited from her valuable comments, constructive criticism, support, effort and patience with me. She had high influence on me, personally.

Thanks to all academic professors who helped me with their precious advice and support, from Biomedical Engineering dept.: Dr. Inas Yassine, Dr. Tamer Basha and Dr. Muhammed Rushdi, Dr. Mona Taher, Dr. Sherif El Gohary and Dr. Ayman El Deeb. And from Engineering Physics dept.: Dr. Mohamed Hesham, Dr. Mona El Naggat, Dr. Samia Ibrahim, Dr. Nihal Yassin, Dr. Fayza Gamal and Dr. Nadia Ra'fat.

I would like to thank IBRO-Imbizo organizations for providing me a full scholarship in the computational neuroscience summer school 2018 through my master pursuit and giving me a chance to learn discipline neuroscience studies and researches. I would like to thank my abroad neuroscience family: Tim vogels, Joseph Raimondo, Yiota, Larry Abbott, Adrienne Fairhall, Byron Yu, Srikanth Ramaswamy, Michael Hausser, Timothy Lillicrap, Blacke Richard, Misha Tsodyks, Mate Lengyl, Friedemann, William, Alex, Katharina, Agostina and Emma.

Special Thanks to Athanasia Papoutsis and Peter Latham for lending me their precious time and continuous help and support through the summer school and later.

Big Thanks to all my neuroscience friends. And special thanks to those fellows who helped me through fruitful discussions: Gonul Uludag, Mohamed Gomaa, Muhammed Aburidi, Khedr, Jasmine Poirier and Ana Claudia.

Sincerely, I would like to thank my close friends who supported me with technical and incorporeal help and advice: Manar Nasser, Ghadaa Walaa El-Din, Ola Sarhan, Asmaa Mohamed and Shaimaa Ahmed.

Thanks to Noha Mohamed Fouad for being my supporting friend and also my psychologist in the hard time. Thanks for her radiating energy.

Many thanks to Wafaa Saber -a professor to be- for being my ideal consultant and giving me her precious advice.

Special thanks to Mina Elias for passing me his experience and getting me in his interesting valuable chats.

Uncountable thanks to my friends Tasneem Salah and Sarah Hamdy for every joyful moment they gifted me and their wonderful companionship through my study, my work and my life.

Special thanks to my dearest friend Kariman Mahmoud for our unbroken bond and for never giving up in me, and continuous support and encouragement. Thanks for her tolerance and being the first key of success and happiness. Thanks for all good and bad times we passed and will pass.

And unlimited thanks to my life-long companion Amany Amr for living with me every scene in the master experience from start to end. Thanks for sharing me every career and my personal life through the master degree period. And thanks for every given joy and every wiped tear.

Last but not the least, I would like to share my success with my beloved family. Without them, the dream would never have come true, they always encouraged me to do my best. I am most grateful to my mother “Magy” for unconditional love and all patience, sacrifices and for always putting me in the first priority. I also feel blessed for having my sister “Sara” who surrounded me with all love, care and advice. And glad deeply with the wonderful gift, my grandmother “Kadria”, for her existence and her prayers to me every single moment.

Samar Ahmed Mahmoud Abbass
