**ROLE OF CERTAIN MICROORGANISMS IN
BIOCONTROL OF LEAF SPOT DISEASE
OF SUGAR BEET.**

THESIS

SUBMITTED IN PARTIAL FULFILMENT
FOR THE DEGREE OF
MASTER OF SCIENCE

IN

MICROBIOLOGY

BY

YASSER HAMADTO EL-SAYED EL-HALMOUCH
B.Sc. (1991)

DEPARTMENT OF BOTANY
FACULTY OF SCIENCE
TANTA UNIVERSITY

1997

B

15472

Supervisors

Prof. Dr. Mohamed El- Sayed Osman

Professor of Microbiology,
Head of Botany Department,
Faculty of Science,
Helwan University.

Prof. Dr. Abd El- Raheem Ramadan El- Shanshoury

Professor of Microbiology,
Faculty of Science, Botany Department
Tanta University.

Dr. Hamdy El- Refay Agwa

Lecturer of Microbiology, Biology Department
Faculty of Education, Kafr El- Sheikh,
Tanta University.

A handwritten signature in black ink, consisting of a long, sweeping horizontal stroke with a small loop and a vertical tick mark below it.

To whom it may concern

This to certify that Mr. Yasser Hamadto El-Sayed El-Halmouch has attend and passed successfully the following postgraduate courses as a partial fulfillment of the requirements for the degree of Master of Science, Botany Department (**Microbiology**) during the academy year 1993 /1994. The courses covered the following topics:

- 1- Phycology, Physiology of algae and Physiology of fungi.
- 2- Biochemistry, Fermentation chemistry and Immunological reactions.
- 3-Plant pathology, virology and Special fungi.
- 4- General and applied bacteriology, Uses of microorganisms in preparation of leathers, and methods and Instruments used in Microbiology and Applied Microbiology.
- 5- Biostatistics.
- 6- Germany Language.

This certificate is issued at his own request.

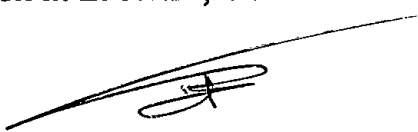

Head Botany Department

Prof. Dr. A. Badr

Curriculum Vitae

Name : Yasser Hamadto El-Sayed El-Halmouch
Date of Birth : 17- 2- 1970
Locality : Mahalla (Gharbia Governorate)
Nationality : Egyptian
Social status : Single
Qualification : B.Sc. degree in Botany with a general grade “very good”, May 1991, Faculty of Science, Tanta University.
Experiance : Demonstrator of Botany, Biology Department,
Faculty of Education in El-Arish, Suez Canal
University.

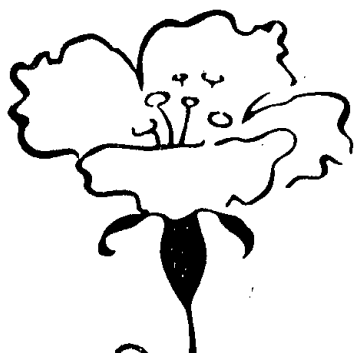

Acknowledgements

The author expresses his gratitude to Prof. Dr. M. El- Sayed Osman Professor of Microbiology, Faculty of Science Helwan University, and Prof. Dr. A. R. El-Shanshoury, Professor of Microbiology, Faculty of Science, Tanta University for suggesting the theme of this study, keen interest, help and guidance they have given during their supervision of this work.

I am also indebted to Dr. H. R. Agwa, Lecturer of Microbiology, Faculty of Education, Kafr El-Sheikh, Tanta University for the help and guidance he has given during the supervision of this thesis.

The author wishes also to extend his thanks to Prof. Dr. Zanaty, Dean of Faculty of Education Kafr El- Sheikh, Tanta University for the facilities that she given during preparation of this thesis and to Mr. E. El- Shabbasy maneger of the Agricultural Secondary School, Kafr El-Sheikh for his help during the cultivation experiments.

The authorities of Botany Department, Faculty of Science, Tanta University are also acknowleged for the facilities offered, without which the present work would never appear.

**To My Mother, My
Future Wife and The
Memory of my Father.**

CONTENTS

Preface	1
chapter I	2
Introduction	2
Causal Organisms	2
Production of Antibiotics by Soil Microorganisms	4
Soil microorganisms producing Fungicides	8
Biological control of Plant Diseases	10
Taxonomy of <i>Streptomyces</i> species	24
Chapter II	27
Materials and Methods	27
i- Materials:	27
- Cultural Media	27
ii- Methods	32
I-Isolation and purification of Pathogenic Fungi	32
II- Isolation and Purification of Microorganisms	33
III-Determination of Antagonistic Activitiy of the Selected	35
Microorganisms	
a-Dual-plate method	35
b-Cut-plug technique	35
c-Well assay methods	36
d-Biomass response of pathogenic fungi to the most	
antagonistic organisms	37
VI- Characterization and identification of the selected	
microorganisms	37
A- Actinomycetes:	37
1- Biochemical criteria:	37
2- Macroscopic features:	38
a- Colour of aerial mycelium:	38
b- Colour of substrate mycelium and soluble	

pigments	38
3- Microscopic characterization	39
4- Physiological properties	40
a- Production of melanine pigment	40
b- Utilization of carbon sources	40
c- Utilization of nitrogen sources	40
d- Degradation	
I- Starch degradation	41
II- Allantoin degradation	41
III-Arbutin degradation	41
IV-Xanthine degradation	42
5- Hydrogen sulphide production	42
6- Growth at 45°C	42
7- Growth inhibition	42
8- Antibiosis	43
B- Soil and Pathogenic Fungi	43
V-experimental organisms	43
IV-Effect of culture filterates of the most potent microorganisms on growth activities of <i>Alternaria</i> <i>alternata</i> and <i>Cercospora beticola</i>	44
1-Germination and germ-tube extension of spores	44
2-Sporulation	45
IIV-Detection and effect of the volatile substance(s) in the culture filterate of the most potent microorganisms	45
IIIV- Determination of the experimental organisms biomass Estimation of the biomass	46
XI- Determination of pH values	47
X-Biological control of sugar beet leaf spot pathogen <i>Alternaria alternata</i> and <i>Cercospora beticola</i>	47
1- Experimental plants	47

2- Methods of delivery :	47
a-Seed treatment (Drench)	47
b- Leaf treatment (Aerial Sprays)	48
3- pathological responses of the plant	48
IX- Statistical analysis	49
Chapter III	50
Experimental Results	50
I-Isolation, characterization and identification of the pathogens	50
II-Screening for the antifungal activity of the locally isolated microorganisms	55
1- Isolation	55
2- Characterization of the purified isolates	55
3- Screening	58
a-The antagonistic activities of the locally-isolated microorganisms against the pathogenic fungus <i>Cercospora beticola</i>	58
b-The antagonistic activities of the locally-isolated microorganisms against the pathogenic fungus <i>Alternaria alternata</i>	61
III- Identification of the experimental organisms	65
VI-Effect of different media on the growth of the tested pathogenic fungi :	75
V- Effect of different incubation periods on the growth of the pathogenic fungi :	75
IV-Factors affecting the antagonistic activities of the selected antagonistic strains of <i>Streptomyces anulatus</i> , <i>Streptomyces chromofuscus</i> , <i>Streptomyces albaduncus</i> and <i>Trichoderma viride</i> .	81
1-Effect of incubation periods :	81

2-Effect of different antagonistic filterate concentrations :	84
3-Effect of different media :	87
4-Effect of hydrogen ion concentration :	95
5-Effect of temperature :	103
6-Effect of different carbon sources	111
7-Effect of concentration of the best carbon sources :	118
8-Effect of different nitrogen sources	125
9-Effect of different concentrations of the nitrogen sources :	133
10-Effect of some heavy metals	141
11-Detection of volatile substances produced by the experimental isolates	149
IIV-Microscopic Studies	154
a- Effect of culture filterates of the experimental isolates on the germ-tube length of the conidia of the two pathogenic fungi	154
b-Effect of culture filterates of the antagonistic organisms on the sporulation of the leaf-spot fungi of sugar beet (<i>C. beticola</i> & <i>A. alternata</i>)	157
c- Effect of culture filterates fo the antagonistic organisms of the experimental isolates on the conidial germination of the leaf-spot fungi of sugar beet	157
IIIV-In vivo studies on the biological control of leaf-spot disease of sugar beet	163
Discussion	173
References	186
English Summary	211
Arabic Summary	v
