Cloning and Characterization of Salt Stress Related Gene(s)

By

Khaled Sabry Abdallah
B. Sc. Biochemistry
Ain Shams University (1986)
M.Sc. Biochemistry
Helwan University (1998)

Supervisors

Prof. Dr. Magdy Ahmed Madkour.....
Director, Agricultural Genetic
Engineering Research Institute,
Agricultural Research Center.

Dr. Mohga Shafik Abdallah.....
Assistant Professor,
Chemistry Department,
Faculty of science,
Helwan University.

Dr. El-Sayed Mohamed Mahdy.....
Assistant Professor,
Chemistry Department,
Faculty of science,
Helwan University

ACKNOWLEDGMENTS

I do thank Allah for all gifts, which have given to me.

I would like to express my most sincere gratitude to Prof. Magdy Madkour, Director, Agricultural Genetic Engineering Research Institute (AGERI), for his supervision, valuable guidance, kindness, and continuous support.

I would like to express my deep gratitude to Dr. El-Sayed Mahdy, Assistant Professor, Chemistry Department, Faculty of Science, Helwan University, for his supervision, valuable guidance, and continuous support.

I would like to express my deep gratitude to Dr. Mohga Abdallah, Assistant Professor, Chemistry Department, Faculty of Science, Helwan University, for her supervision, valuable guidance, and continuous support.

I am greatly indebted to Dr. Mohamed Abdallah and Dr. Walid Maaty for their great efforts, help and continuous support especially in the preparation of the manuscript.

I would like to express my gratitude to the PCMG department for their patience, help and continuous support (Dr. Ashraf Hussien, Khaled Elmangoury, and Om-Kalthom Mohamed)

I would like to thank Agricultural Genetic Engineering Research Institute (AGERI), Agriculture Research Center (ARC), for providing all facilities required to complete the study.

Khaled Sabry

LIST OF FIGURES

Figure 1: Structure of various osmoprotectants found in plants.	11
Figure 2: Metabolic pathways originating from <i>myo</i> -inositol.	15
Figure 3: CLUSTAL W (1.8) multiple sequence alignment of <i>myo</i> -inositol 1-phosphate synthase genes.	45
Figure 4: <i>Arthrocnemon glaucum</i> plant.	50
Figure 5: Ethidium bromide-stained 1.2% formaldehyde agarose gel showing the integrity of the total RNA.	51
Figure 6: RT-PCR amplified product.	53
Figure 7: PCR screening of different white colonies.	54
Figure 8: Nucleotide sequence of KM-897 clone.	56
Figure 9: The amino acid Sequence of the KM-897 clone.	57
Figure 10: Schematic representation of the structure of <i>myo</i> -inositol 1-phosphate synthase gene and the strategy used to isolate the full-length coding sequence from <i>Arthrocnemon glaucum</i> plant.	60
Figure 11: 5' RACE amplified product.	61
Figure 12: Nucleotide sequence of full coding sequence of <i>myo</i> -inositol 1-phosphate synthase gene (KM-1539) from <i>Arthrocnemon glaucum</i> plant.	63
Figure 13: The amino acid sequences of full coding sequence of <i>myo</i> -inositol 1-phosphate synthase gene from <i>Arthrocnemon glaucum</i> plant.	65
Figure 14: CLUSTAL W (1.8) multiple sequence alignment of deduced amino acid of <i>myo</i> -inositol 1-phosphate synthase gene from different plant sources including <i>Arthrocnemon glaucum</i> .	68
Figure 15: Dendrogram displaying the result of cluster analysis of <i>myo</i> -inositol 1-phosphate synthase gene from different plants including <i>Arthrocnemon glaucum</i> .	

EXHIBIT 10

1. The first of the two main findings of the study is that the majority of the respondents (75%) are in the 18-24 age group.
2. The second finding is that the majority of the respondents (65%) are female.
3. The third finding is that the majority of the respondents (70%) are currently employed.
4. The fourth finding is that the majority of the respondents (60%) are currently living with a partner.
5. The fifth finding is that the majority of the respondents (65%) are currently attending school.

LIST OF TABLES

Table 1: Types of response of plants to environmental stresses.	5
Table 2: Functional groups of genes/proteins activated in salt stress with potential for providing tolerance.	25
Table3: <i>Myo</i> -inositol gene of selected plants retrieved from the GenBank.	45
Table 4: Summary of sequence database search results of KM-897.	50
Table 5: Summary of sequence database search results of KM-1539.	66
