**A Cross Sectional Study of the Relationship
between the Presence / Severity of Coronary
Artery Disease Evaluated by Computed
Tomography Coronary Angiography and
the Presence / Degree of Non-Alcoholic Fatty
Liver Disease Evaluated by Trans-
Abdominal Ultrasonography**

Thesis

*Submitted for Partial Fulfillment of Master Degree
in Diagnostic Radiology*

Presented by

Amal Ahmed Ibrahim Ahmed Hegazi

M.B.B.Ch

Ain Shams University

Supervised by

Prof. Dr. Waleed Mohammed Hetta

Assistant Professor of Radio-diagnosis

Faculty of Medicine - Ain Shams University

Prof. Dr. Emad Hamid Abdeldayem

Assistant Professor of Radio-diagnosis

Faculty of Medicine - Ain Shams University

*Faculty of Medicine

2020

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ

سُبْحَانَكَ لَا عِلْمَ لَنَا
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

Acknowledgments

*First and foremost, I feel always indebted to **Allah** the Most Beneficent and Merciful.*

*My sincere thanks go to my advisor **Prof. Dr. Waleed Mohammed Hetta** for his continuous support of my master degree thesis, for his patience, motivation, enthusiasm, immense knowledge and hard questions. His guidance helped me in all the time of research and writing of this thesis. I could not have imagined having a better advisor and mentor for my master degree study.*

*Besides my advisor, I would like to thank my co-advisor **Prof. Dr. Emad Hamid Abdeldayem** for his support, encouragement, and insightful comments.*

*Last but not the least, I would like to dedicate my work to **my father's sole**; for everything I have become today is because of the way he raised me. I also want to thank my **friends** and **family** for helping me at every step of my work; thank you for allowing me time away from you to research and write. My **mother** thanks for supporting me spiritually throughout my life and for your encouragement when the times got rough. My **sisters Enas and Amani**; thank you for providing management of my household activities while I completed my work and for the countless times you kept the children during our hectic schedules. My heartfelt thanks.*

Amal Hegazi

List of Contents

Title	Page No.
List of Tables.....	5
List of Figures	7
Introduction	- 1 -
Aim of the Work	19
Review of Literature	20
Anatomy of the coronary arteries and the liver	20
Technique of CT coronary angiography and liver ultrasound	36
Pathology of coronary artery disease and bright liver.....	69
Patients and Methods.....	79
Results.....	87
Case Presentation	115
Discussion	130
Summary and Conclusion	139
References	141
Arabic Summary	

List of Tables

Table No.	Title	Page No.
Table 1:	Absolute and relative contraindications for computed tomography coronary angiography	41
Table 2:	Showing the p values of correlation between the number of coronary arteries affected, the coronary lesion stenotic degree and the non-alcoholic fatty liver disease degree	100
Table 3:	Showing the Kruskal-Wallis test results of correlation between the non-alcoholic fatty liver disease grades and the number of coronary arteries affected.	101
Table 4:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade I and the number of coronary arteries affected.	102
Table 5:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade II and the number of coronary arteries affected.	103
Table 6:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade 3 and the number of coronary arteries affected.	104
Table 7:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 1 and grade 3 and the number of coronary arteries affected.	105
Table 8:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 2 and grade 3 and the number of coronary arteries affected.	106

List of Tables cont...

Table No.	Title	Page No.
Table 9:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 1 and grade 2 and the number of coronary arteries affected.	107
Table 10:	Showing the Kruskal-Wallis test results of correlation between the non-alcoholic fatty liver disease grades and the degree of affected coronary arteries resultant lesion stenosis.	108
Table 11:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade I and the degree of coronary artery lesion resultant stenosis.	109
Table 12:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade 2 and the degree of coronary artery lesion resultant stenosis.	110
Table 13:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 0 and grade 3 and the degree of coronary artery lesion resultant stenosis.	111
Table 14:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 1 and grade 2 and the degree of coronary artery lesion resultant stenosis.	112
Table 15:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 1 and grade 3 and the degree of coronary artery lesion resultant stenosis.	113
Table 16:	Showing the Mann-Whitney U test results between the non-alcoholic fatty liver disease grade 2 and grade 3 and the degree of coronary artery lesion resultant stenosis.	114

List of Figures

Fig. No.	Title	Page No.
Figure 1:	Left main coronary artery trifurcating into left anterior descending, left circumflex and ramus diagonalis arteries	23
Figure 2:	Bifurcation of the left main coronary artery into the left anterior descending artery (arrow) and the left circumflex artery (arrowhead).....	23
Figure 3:	Diaphragmatic surface of the heart; the right coronary artery supplying the left part	27
Figure 4:	General anatomy of the coronary arteries.....	28
Figure 5:	(a) Axial multiplanar reformation image displays the origin of the coronary arteries from the aorta. (b) Volume rendering image shows the left coronary artery.....	30
Figure 6:	Ligamentous attachments of the liver	32
Figure 7:	Association of stomach, porta hepatis, and hepatic flexure to the Liver	34
Figure 8:	Ultrasound appearance of hepatic venous vasculature.....	35
Figure 9:	Ultrasound image demonstrating the hepatic veins and the liver segments.....	36
Figure 10:	Algorithm for coronary artery evaluation at computed tomography coronary angiography	38
Figure 11:	A) Anteroposterior scanogram. (B) Timing bolus image acquisition.	46
Figure 12:	Computed tomography imaging planes	51
Figure 13:	Curved multi-planar reformation image of the right coronary artery providing an excellent depiction of the vessel along its entire course.....	55

Fig. No.	Title	Page No.
Figure 14:	Volume rendering 3-Dimensional reformation image	57
Figure 15:	Stair-step artifacts.....	60
Figure 16:	Electrocardiography editing of stair step artifact.....	61
Figure 17:	Assessment of liver echogenicity by ultrasonography.....	68
Figure 18:	Pathogenesis of atherosclerosis.....	73
Figure 19:	Atherosclerosis Prevention based on risk factors assessment.....	74
Figure 20:	Plaque progression.....	74
Figure 21:	Illustration of Non-alcoholic fatty liver scoring system.....	85
Figure 22:	Illustration of the percentage of patient's gender among the study population.....	87
Figure 23:	Illustration of the percentage of patient's age among the study population.	88
Figure 24:	Illustration of the percentage of the number of coronary arteries affected among the study population.....	89
Figure 25:	Illustration of the percentage of each main coronary artery affection among the study population.	90
Figure 26:	Illustration of the percentage of stenosis degree of coronary artery among the study population.	91
Figure 27:	Illustration of the percentage non-alcoholic fatty liver disease grades among the study population.	92
Figure 28:	Illustration of the positive significant correlation between number of affected coronary arteries by stenotic lesions and the age of the studied population.....	93

List of Figures *cont...*

Fig. No.	Title	Page No.
Figure 29:	Illustration of the positive significant correlation between the differential site of affected main coronary arteries by stenotic lesions and the age groups of the studied population.	94
Figure 30:	Illustration of the positive significant correlation between the degree of lesions resultant stenosis affecting coronary arteries in percentage and age.....	95
Figure 31:	Illustration of the non-positive correlation between the number of coronary arteries affected by stenosis and the cases gender.	96
Figure 32:	Illustration of the non-positive correlation between the site of main coronary arteries affected by stenosis and the cases gender.	96
Figure 33:	Illustration of the non-positive correlation between the site of main coronary arteries affected by stenosis and the cases gender.	97
Figure 34:	Illustration of the positive significant correlation between presence and degree of non-alcoholic fatty liver disease and the age of the studied population.	98
Figure 35:	Illustration of the non-positive correlation between the presence and degree of non-alcoholic fatty liver disease and the cases gender.....	99
Figure 36:	Case 1: Computed tomography coronary angiography curved multi-planar reformation image showing proximal left anterior descending artery eccentric non-significant calcific plaques causing less than 50% stenosis.	115

List of Figures *cont...*

Fig. No.	Title	Page No.
Figure 37:	Case 1: Computed tomography coronary angiography curved multi-planar reformation image showing mid- left circumflex coronary artery eccentric non-significant calcific plaque causing less than 50% stenosis.....	115
Figure 38:	Case 1: Normal computed tomography coronary angiography curved multi-planar reformation image of the right coronary artery; showing patent average caliber vessel free from significant stenosis or occlusion.	116
Figure 39:	Case 1: Real time abdominal ultrasonography showing grade II non-alcoholic fatty liver disease; evident by increased liver parenchymal echogenicity in comparison to that of the right kidney obscuring the peri-portal echogenicity yet with still preserved diaphragmatic echogenicity.....	116
Figure 40:	Case 2: Computed tomography coronary angiography curved multi-planar reformation image showing mid- left anterior descending coronary artery eccentric non-significant calcific plaque causing less than 50% stenosis.	117
Figure 41:	Case 2: Normal computed tomography coronary angiography curved multi-planar reformation image showing patent, average caliber vessel, free from significant stenosis or occlusion.	117
