Procalcitonin as a Diagnostic Marker in Differentiating Bacterial From Abacterial Meningitis

Thesis

Submitted to the High Institute of Public Health- University of Alexandria in partial fulfillment of the requirements for the

Degree of Master of Public Health (Microbiology)

By

Amira Ezzat Khamis

MBBCH, Faculty of Medicine, University of Alexandria, 2000

High Institute of Public Health
University of Alexandria
2005

B

١٤٨٠٨

SUPERVISORS

Prof. Dr. Aleya Abdel Gawad Abass

Professor of Microbiology
High Institute of Public Health
Alexandria University

Prof. Dr. Hoda Ahmed El-Shamy

Professor of Microbiology
High Institute of Public Health
Alexandria University

Dr. Yosria Omran Aly

Consultant of Microbiology
Alexandria Fever Hospital

List of abbreviations

CNS	: Central nervous system
CRP	: C-reactive protein
C. neoformans	: *Cryptococcus neoformans*
h	: hours
H. influenzae	: *Haemophilus influenzae*
Hib	: *H influenzae* type B
HIV	:Human immuno-deficiency virus
HSV	: Herps simplex virus
IL-1	: Interleukin-1
IL-6	: Interleukin-6
IL-8	: Interleukin-8
L. monocytogenes	: *Listeria monocytogenes*
m	:minutes
M. bovis	: *Mycobacterium bovis*
M. tuberculosis	: *Mycobacterium tuberculosis*
N. meningitidis	: *Neisseria meningitidis*
OMPs	: Outer membrane proteins
PCR	: Polymerase chain reaction
PCT	: Procalcitonin
S. pneumoniae	: *Streptococcus pneumoniae*
TBM	: Tuberculous meningitis
TNF	: Tumor necrosis factor
T-I	: Trans-Isolate
ZN	: Ziehl-Neelsen

LIST OF TABLES

Table		Page
I	Causes of meningitis	2
II	Guidelines for the interpretation of results following hematologic and chemical analysis of CSF from children and adults	29
III	Antibiotics recommended for empirical therapy in patients with suspected bacterial meningitis who have a nondiagnostic gram's stain of cerebrospinal fluid	35
IV	Recommendations for antibiotic therapy in patients with bacterial meningitis who have a positive Gram stain or culture of cerebrospinal fluid	36
V	Guidelines for the duration of antibiotic therapy	37
VI	Zone diameter for resistant (R), moderately susceptible (MS), and susceptible (S) categories for selected antibiotic discs.	59
VII	Final diagnosis of the 75 suspected meningitis cases.	66
VIII	Aspect of the CSF in 64 bacterial and abacterial meningitis cases.	68
IX	Mean leukocytic count, glucose and protein concentrations of 64 bacterial and abacterial meningitis cases.	70
X	A-C Comparison of measuring sugar, protein and leukocytic count by combur^{10} strips and conventional methods in CSF of 64 meningitis cases.	72
XI	Distribution of the 32 bacterial meningitis cases according to the causative bacterial agent.	76

Table		Page
XII	Distribution of the 64 meningitis cases according to their age and causative agents.	79
XIII	Distribution of the 64 meningits cases according to their sex and causative agents.	81
XIV	Outcome of the 64 meningitis cases	83
XV	Distribution of the 64 meningitis cases according to their causative agent and PCT blood level	86
XVI	Results of the 32 bacterial meningitis cases according to method of diagnosis	88
XVII	Comparison between results of the laboratory methods in diagnosing different types of bacterial meningitis	90
XVIII	(A-C) Results of 27 bacterial meningitis cases by culture-PCT, Gram stain-PCT; and Gram stain-Culture	92
XIX	Agreement between each two methods used for the diagnosis of 27 bacterial meningitis cases	93
XX	Comparison between the results of 59 meningitis cases by, (Gram stain-Culture) and PCT blood level	95
XXI	Positivity of different laboratory methods of diagnosis in relation to pre admission antibiotic intake	97
XXII	The number and percentage of sensitive isolates recovered from bacterial meningitis cases	99

LIST OF FIGURES

Figure		Page
Figure (1):	**Combur[10] strips showing protein, sugar and leukocytic count in CSF of a positive and a negative case.**	53
Figure (2):	***N. meningitidis* by Gram stain (Gram negative diplocopcci)**	55
Figure (3):	**Colonies of *S. pneumoniae* showing alpha-hemolysis and sensitive to optochin.**	57
Figure (4):	**Colonies of *M. tuberculosis* on Löwenstein Jensen medium**	58
Figure (5):	**BRAHMS PCT® -Q kit**	62
Figure (6):	**A positive case by BRAHMS PCT® -Q kit**	64
Figure (7):	**Distribution of the 32 bacterial meningitis cases according to the causative bacterial agents**	77
Figure (8):	**Outcome of the 64 meningitis cases**	84

ACKNOWLEDGEMENT

Thank to **God** *who have lightened my path to accomplish this work. The few words I wrote here can never express the feelings of gratitude, I have for my supervisors and the persons who helped me to achieve this work.*

If I am to vote the heartiest thanks, it is to **Dr. Aleya Abdel Gawad Abass**, *Professor of Microbiology, High Institute of Public Health, who I can not possibly convey words of my great appreciation for her great help, faithful effort in supervision during the progress of this work. Without her valuable instructions this work would never have been done.*

I would like to express my gratitude and deepest thanks to **Dr. Hoda Ahmed El-shamy**, *Professor of Microbiology, High Institute of Public Health, for her valuable effort and constant guidance and help. She denied no effort for the completion of this work.*

I would like to express my deepest thanks and gratitude to **Dr. Yosria Omran,** *Consultant of Microbiology, Alexandria Fever Hospital, for her valuable assistance and unlimited cooperation during sampling.*

I would like to extend my thanks to **Dr. Nehad Hassan Mahdy,** *Assistant professor of Biostatistics, High Institute of Public Health, for her kind cooperation in performing the analysis of the results in this study.*

I am grateful to all the members of the staff and personnel of Microbiology Department, who directly or indirectly helped me to complete this work.

I would like to express my deepest thanks to all who helped me by time, effort and spirit in fulfilling this work.

INTRODUCTION
