Retrospective survey study and genetic
Diagnostic Classification of genetic Diseases
of patients in Genetics Clinic Pediatric
Department, Menoufiya University.

Thesis

Submitted for partial fulfillment

OF M.Sc Degree in pediatric

By

Helmy Abd El- Mohsen Abd El-Said Barr

M.B.B.Ch

Supervisor

 **Prof.Dr./ Soheir sayed Abou Ell-Ella**

Professor of pediatrics, Head of Genetic unit

Faculty of Medicine

Menoufiya University

 **Prof.Dr./ Ahmed Thabet Mahmoud**

Professor of pediatrics,

Faculty of Medicine

Menoufiya University

 **Dr. /Maha Atef M.Tawfik**

Assistant Professor of pediatrics

Faculty of Medicine

ACKNOWLEDGEMENT

- I'm greatly indebted to *Prof. Dr. Soheir Sayed Abou Ell.Ella* Professor of Pediatrics Head of Genetic unit, Faculty of Medicine for her continuous interest and kindness throughout the performance of this research, she did every effort and spared too time to offer her help up to the utmost.
 - I'm so grateful to *Prof Dr. Ahmed Thabet Mohamoud* Professor of Pediatrics Faculty of Medicine-Menoufiya University for his meticulous supervision, valuable pieces of advice and his guide throughout the research period.
 - I owe special gratitude *Prof. Dr. Maha Atef Twafik* Assistant Professor of Pediatrics Faculty of Medicine-Menoufiya University for her great effort, precious advice, endless help and profound support throughout the performance of this work.
 - I am grateful to *Prof. Dr. Fat'hia Mohamed El-Nemr* Assistant Professor of Pediatrics Faculty of Medicine- Menoufiya University, for her kind supports in revising this work and moral support during the progress of the work.
-

List of tables	I
List of figures	III
List of abbreviations	V
Introduction	1
Aim of the work	3
Review of literature	4
- Genetic disease.	4
- Demographic pattern of Arab and Egypt population.	8
- Common genetic disease in Arab world and Egypt.	11
- Risk factors for genetic disease.	14
- Mode of inheritance of genetic disease.	23
- Prenatal Diagnosis for Congenital Malformations and Genetic Disorders.	41
- Investigation of genetic disorders.	47
- Prevention and control of genetic disease.	52
- Genetic counseling.	55
Subjects & Methods	57
Results	60
Discussion	88
Summary and Conclusion	100
Recommendations	104
References	106
Appendices	
Arabic summary	1

LIST OF TABLES

Tables in the review

Table (1)	Incidence of some genetic diseases among the world.	7
Table (2)	Incidence of some genetic disease among the Arab world and Egypt.	12
Table (3)	Relationship and proportion of shared gene.	16
Table (4)	Selected teratogens and their effect.	18
Table (5)	Example of Microdeletion syndromes.	32

Tables in the results

Table (1)	Distribution of all cases according to the periods of years.	61
Table (2)	Etiological classification of all studied cases.	62
Table (3)	Etiological classification of studied cases with chromosomal aberration.	63
Table (4)	Classification of all studied cases with gene disorders.	64
Table (5)	Hematological disorders encountered among the studied groups.	67
Table (6)	Etiological classification of inborn error of metabolism (IBM) of studied groups.	68

Table (7) Type of isolated congenital anomalies of all studied groups.	69
Table (8) Type of CNS anomalies of all studied groups.	69
Table (9) Muscular disorders encountered among all studied groups.	70
Table(10) Neurocutaneous disorders encountered among all studied groups.	71
Table(11) Skeletal dysplasia encountered among all studied groups.	71
Table(12) Hereditary diabetes insipidus encountered among all studied groups.	71
Table(13) Neurological disorders encountered among all studied groups.	72
Table(14) Multifactorial disorders among studied cases.	73
Table(15) Classification of all studied cases with congenital heart diseases.	76
Table(16) Idiopathic Mental retardation and X- linked Mental retardation groups.	78
Table(17) Disorders of puberty and sexual differentiation.	80
Table(18) Frequency of consanguinity among genetic cases.	81
Table(19) Frequency of different birth orders among genetic cases.	82
Table(20) Frequency of similar cases in the family among genetic cases.	83
Table(21) Frequency of similar cases in the family among genetic cases.	84
Table(22) Frequency of exposure to irradiation during pregnancy with genetic diseases.	85

Figures in the results

Figure (1)	The total cases and sex distribution through the periods of years.	61
Figure (2)	Etiological classification of all studied cases.	62
Figure (3)	Cases and sex distribution of Down syndrome.	63
Figure (4)	Classification of all cases with gene disorders.	65
Figure (5)	Cases and sex distribution of Pituitary dwarfism.	67
Figure (6)	Cases and sex distribution of Duchene muscular dystrophy (DMD).	70
Figure (7)	Cases and sex distribution of isolated epilepsy.	72
Figure (8)	Cases and sex distribution of bronchial asthma.	74
Figure (9)	Cases and sex distribution of cerebral palsy.	75
Figure (10)	Cases and sex distribution of congenital heart disease.	77
Figure (11)	Cases and sex distribution of mental retardation (MR) .	78
Figure (12)	Cases and sex distribution of diabetes mellitus among period of years.	79
Figure (13)	Cases and sex distribution of congenital hypothyroidism (CHT) and cretinism.	79
Figure (14)	Numbers of cases of mental retardation, isolated epilepsy, Down syndrome, pituitary dwarfism, diabetes mellitus, duchene muscular dystrophy and congenital hypothyroidism among period of years.	86
Figure (15)	Number of cases of bronchial asthma, congenital heart disease and cerebral palsy among period of years.	87

LIST OF FIGURES

Figures in the review

- Figure (1) Example of causes of mutation When the DNA strands are separated 21
and copied, the altered base will pair with an incorrect base and
cause a mutation.
- Figure (2) Example of causes of mutations by environmental agent such as 22
nuclear radiation can damage DNA by breaking the bonds between
oxygens (O) and phosphate groups (P).
- Figure (3) Pedigree shows the pattern of autosomal dominant inheritance 24
- Figure (4) Pedigree shows the pattern of autosomal recessive inheritance and 25
consanguineous mating.
- Figure (5) Pedigree shows the pattern of X-linked dominant inheritance 27
- Figure (6) A family pedigree for an X-linked recessive disease such as red- 28
green color blindness, where affected males can reproduce.
- Figure (7) Structural chromosomal disorders 36
- Figure (8) Pedigree of imprinted maternally expressed phenotype 39
- Figure (9) Mitochondrial inheritance pedigree. 40
- Figure(10) Normal male karyotype. 48

LIST OF ABBREVIATIONS

A	Adenine.
AAMR	American Association on Mental Retardation
AD	Autosomal Dominant
AR	Autosomal Recessive
BMD	Becker Muscular Dystrophy
C	Cytosine
CHO	Carbohydrate.
CNS	Central Nervous System
C.P	Cerebral Palsy
C.H.D	Congenital Heart Disease
CHT	Congenital Hypothyroidism
CVS	Chorionic Villus Sampling.
DM	Diabetes Mellitus
DMD	Duchene Muscular Dystrophy
DNA	Deoxyribonucleic Acid.
3DUS	Three-Dimensional Ultrasonography
EMR	Eastern Mediterranean Region
Est	Estimation.
FISH	Fluorescence In Situ Hybridization
G	Guanine
G6PD	Glucose Six Phosphate Dehydrogenase Deficiency
GSD	Glycogen Storage Disease
HRB	High Resolution Banding
IBM	Inborn error of Metabolism.
LHON	Leber Hereditary Optic Neuropathy
