**STUDIES ON DEVELOPMENT OF RESISTANCE
TO PHOSPHINE AND CARBON DIOXIDE IN
SOME STORED PRODUCTS PESTS**

By

ZAGHLOUL ABD EL-FATTAH IBRAHIM HALAWA

B.Sc. Agric., Zagazig Univ. (1984)

M.Sc. Agric. (Plant Protection-Pesticides) Zagazig Univ. (1991)

Thesis

**Submitted in Partial Fulfillment of
the Requirements for the Degree of
Doctor of Philosophy**

IN

(Economic Entomology)

**Plant Protection Department,
Faculty of Agriculture, Moshtohor,
Zagazig University (Benha Branch)**

1994

PLANT PROTECTION DEPARTMENT

APPROVAL SHEET

Name : Zaghloul Abd El-Fattah Ibrahim Halawa

Degree : Ph.D. Economic Entomology.

Title : Studies on development of resistance to phosphine
and carbon dioxide in some stored products pests.

This dissertation has been approved by:

Prof. Dr. *Faris El. Lakwah*

Prof. Dr. *G. Meawad*

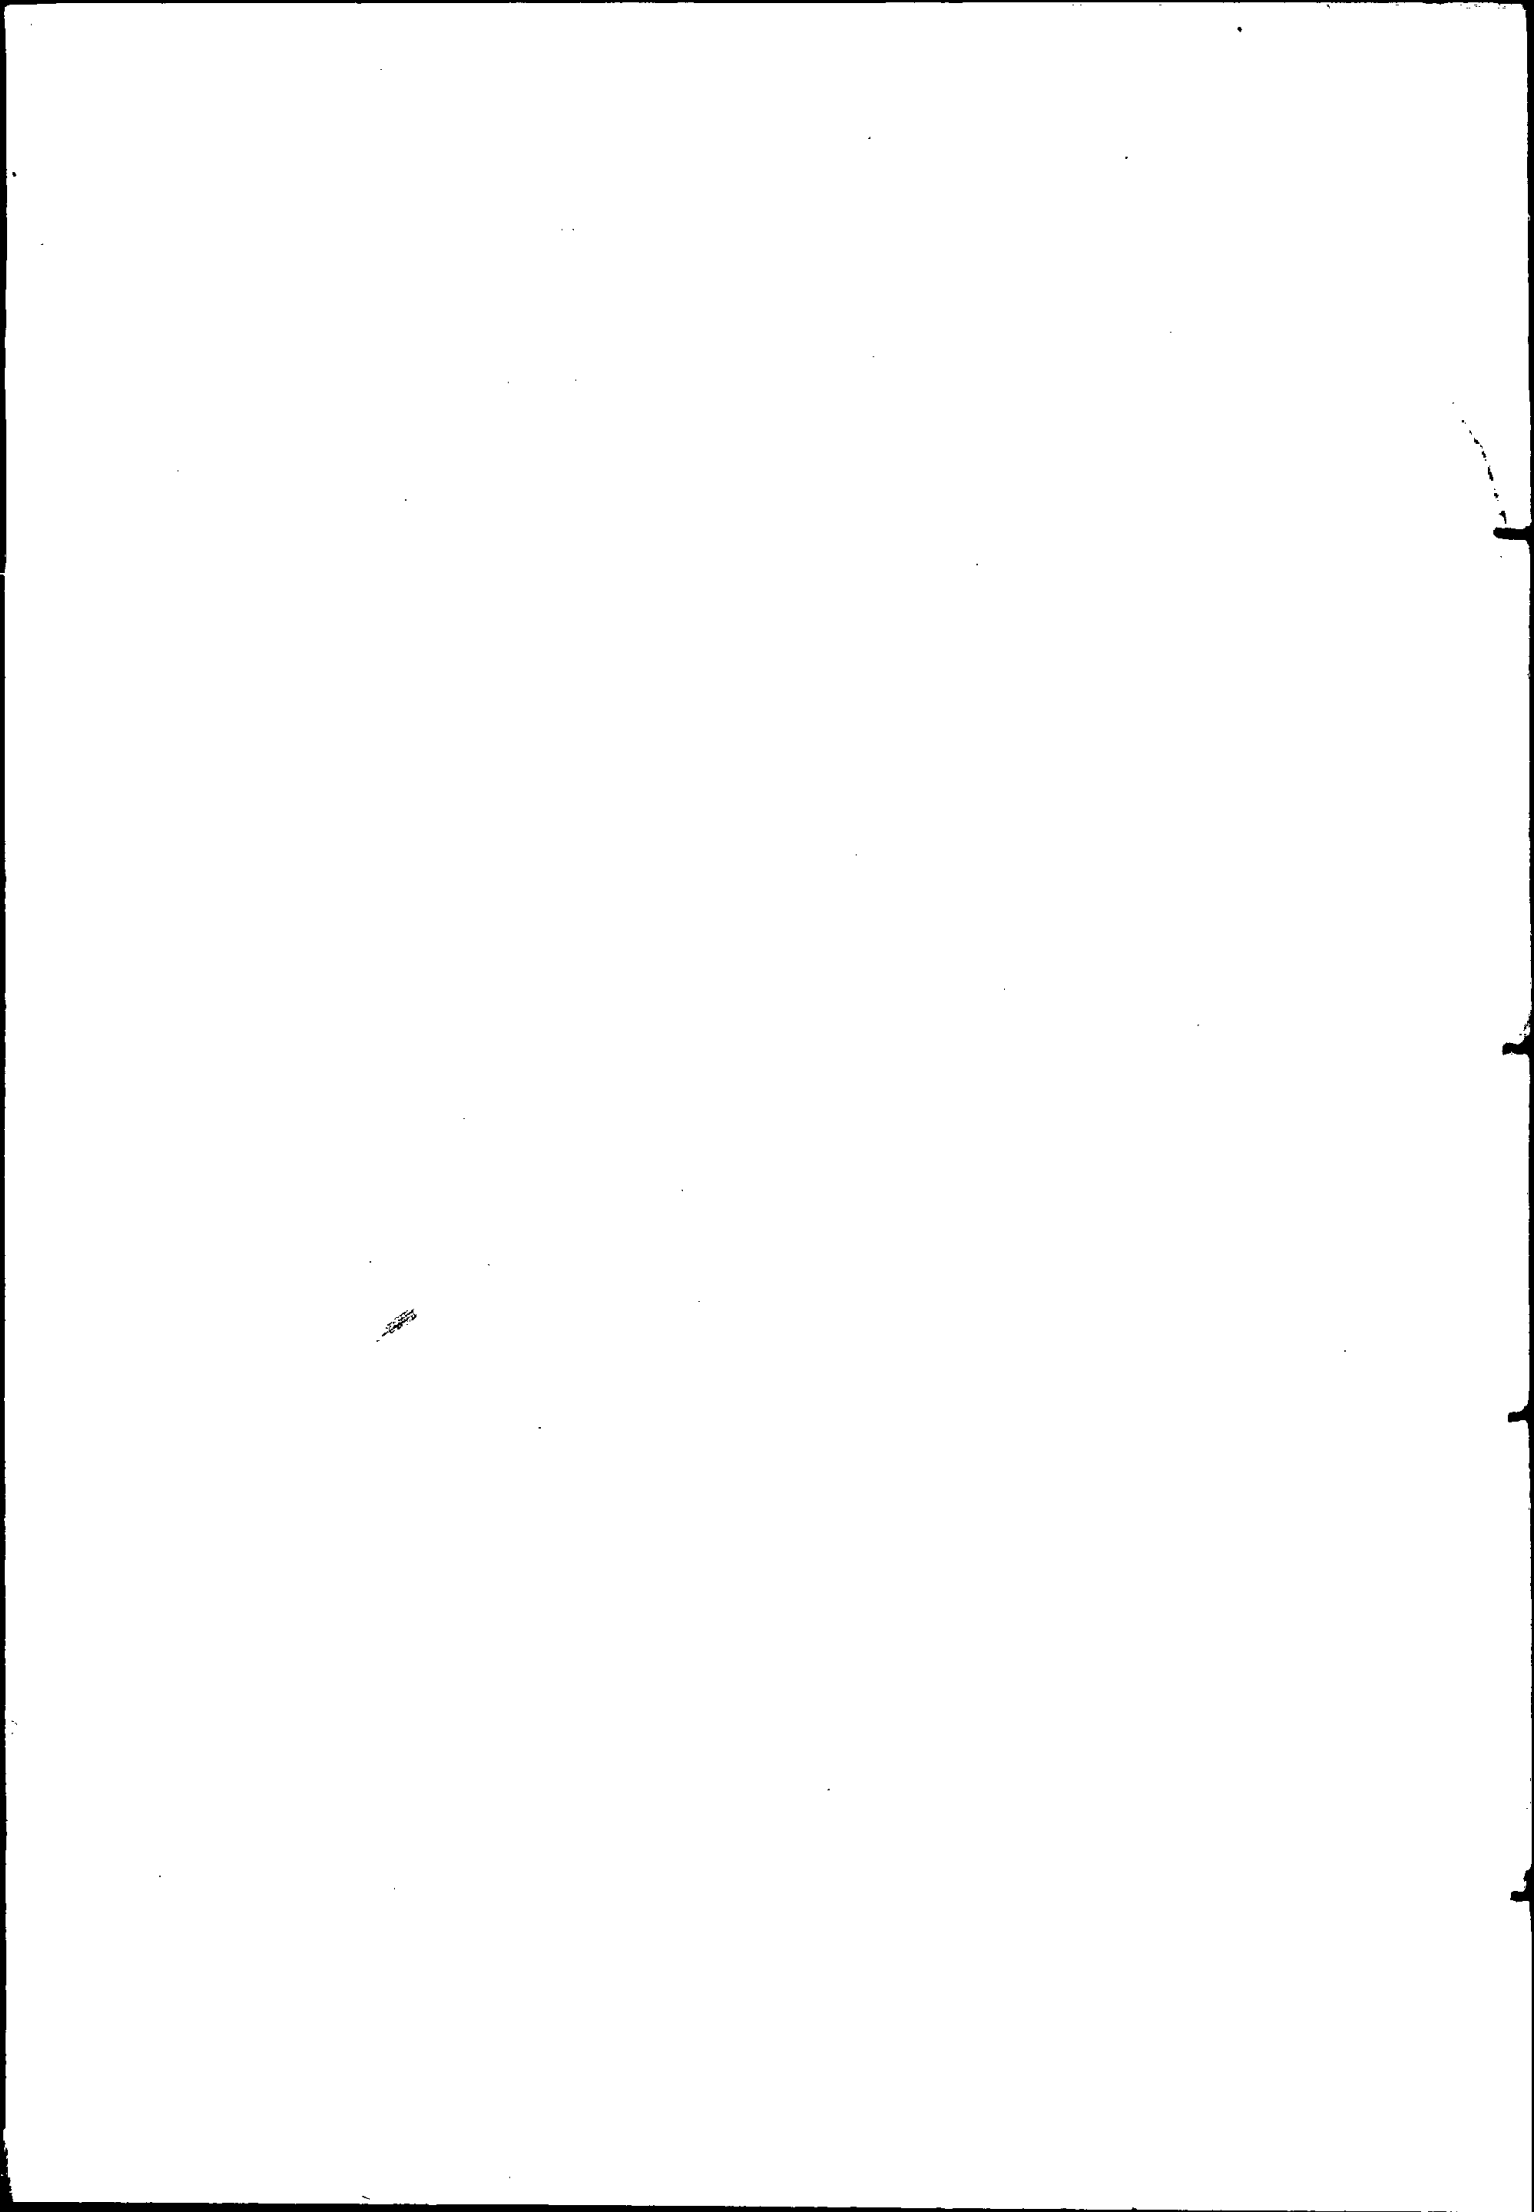

Prof. Dr. *S. A. El. Dew*

(Committee in charge)

Date: 12/10/1994

B

15174

ACKNOWLEDGMENT

The author wishes to express his deepest thanks and appreciation to Prof. Dr. **Faris Amin Mohamed El-Lakwah** Professor of Economic Entomology and the former Head of Plant Protection Dept., Faculty of Agriculture, Moshtohor, Zagazig Univ., for the supervision, assistance, helpful advice, guidance and criticism throughout this work. Also for the reviewing the manuscript.

It is also my pleasure to express my deep thanks to Dr. **Metwally Moustafa Khattab** Associate Professor of Economic Entomology and Dr. **Gad Hamada Rady** Associate Professor of Zoology (Acarology) at the same Department for their supervision, helpful advice during conducting this work. I want also to express my thanks to the staff of the Plant Protection Dept. of the Faculty for their assistance.

My deepest thanks are also due to my Mother and Father for their great patience during implementation of this work.

This work was performed in frame of the Research Project No. 66 (Evaluation of Methyl Bromide Alternatives] at the Faculty of Agriculture, Moshtohor, Zagazig University.

This Project is supported by a grant from Egyptian National Agricultural Research Project (NARP) at the Ministry of Agriculture and Land Reclamation.

CONTENTS

	Page
1. INTRODUCTION	1
2. REVIEW OF LITERATURE	6
2.1. General characteristics of stored product mites ...	6
2.1.1. <i>Astigmata Canestrini</i> , 1891	7
2.1.2. <i>Tryophagus putrescentiae</i> (Schrank, 1781)	8
2.1.3. <i>Aleuroglyphus ovatus</i> (Troupeau, 1878).....	9
2.2. Properties of the fumigants	9
2.2.1. Chemical and physical properties of phosphine ..	9
2.2.2. Carbon dioxide	13
2.2.3. Nitrogen	16
2.2.4. Mixtures of fumigants	16
2.3. Efficacy of phosphine to stored product pests	17
2.3.1. Efficacy of phosphine to mites	17
2.3.2. Efficacy of phosphine to insects	22
2.4. Effect of fumigants and mixtures on pests.....	29
2.4.1. Controlled atmosphere fumigations for insect control	29
2.4.2. Effect of fumigant mixtures against insects	31
2.5. Development of resistance in pests to fumigants ..	37
2.5.1. Insect resistance to phosphine	37
2.5.2. Resistance to CO ₂ and mixtures in stored products pests	49
2.6. Resistance of mites to pesticides	52
2.7. Development of resistance in insects to insecticides	58
2.8. Biological characteristics of insects resistance to insecticides	66
3. MATERIALS AND METHODS	71
3.1. Rearing technique of the species	71
3.2. Selection procedure	72
3.2.1. Selection pressure to mites	72
3.2.2. Selection pressure to insects.....	72

3.3. Assesment of resistance factor	73
3.4. Generation of phosphine	74
3.5. Measuring of phosphine concentrations	74
3.6. Pre-fumigation procedure	74
3.6.1. Mites used	74
3.7. Fumigation procedure	74
3.7.1. Phosphine	74
3.7.2. Carbon dioxide	76
3.7.3. Mixture of PH_3 + CO_2	76
3.8. Post-fumigation procedure	80
3.9. Biological studies	80
3.9.1. Effect of selection pressure for phosphine, carbon dioxide and their mixtures on some biological parameters of <i>C. maculatus</i>	81
3.9.2. The total number of eggs and longevity of female and male	81
3.9.3. The incubation period and the developmental span	81
3.10. Statistical analysis.....	82
4. RESULTS AND DISCUSSION	83
4.1. Development of resistance in the investigated mite species (<i>A. ovatus</i> and <i>T. putrescentiae</i>) to phosphine, carbon dioxide and a combination of the two gases	83
4.1.1. Development of resistance in <i>A. ovatus</i> to phosphine	83
4.1.2. Development of resistance in <i>T. putrescentiae</i> to phosphine	88
4.2. Development of resistance in the two mite species (<i>A. ovatus</i> and <i>T. putrescentiae</i>) to carbon dioxide.....	94
4.2.1. Development of resistance in <i>A. ovatus</i> to carbon dioxide.....	94
4.2.2. Development of resistance in <i>T. putrescentiae</i> to carbon dioxide.....	101

4.3. Development of resistance in the two mite species (<i>A. ovatus</i> and <i>T. putrescentiae</i>) to a combination of phosphine + carbon dioxide.....	105
4.3.1. Development of resistance in <i>A. ovatus</i> to a mixture of phosphine + carbon dioxide	105
4.3.2. Development of resistance in <i>T. putrescentiae</i> to a mixture of phosphine + carbon dioxide	112
4.4. Development of resistance in <i>C. maculatus</i> to phosphine, carbon dioxide and a combination of the two gases.....	116
4.4.1. Development of resistance in <i>C. maculatus</i> to phosphine	116
4.4.2. Development of resistance in <i>C. maculatus</i> to Carbon dioxide	123
4.4.3. Development of resistance in <i>C. maculatus</i> to a combination of phosphine + carbon dioxide ...	129
4.5. Comparison of the capability of the two mite species in development of resistance to the fore-mentioned gases with the pulse insects, <i>C. maculatus</i>	137
4.6. Biological characteristics of the various selected strain of <i>C. maculatus</i>	140
