Using Irradiated Microbial Biomat For Bioremediation of Fish Aquaculture Water

Thesis

Submitted to the University of Ain-Shams, for the fulfillment of Master degree in
Microbiology, Microbiology Department, Faculty of Science, Ain-Shams University

By

Marwa Gamal El Den Afifi Abd El Rahman Ouf

Microbiology Department, National Center for Radiation Research and
Technology (NCRRT)

Supervised By

Dr. Mohamed A. Abouzeid

Professor of Microbiology, Microbiology Department, Faculty of
Science, Ain-Shams University

Dr. Al Zahraa Ahmed Karam El Den

Professor of Microbiology, Microbiology Department, Faculty of
Science, Ain-Shams University

Dr. Ola Mohamed Ahmed Gomaa

Professor of Microbiology, Microbiology Department, National Center
for Radiation Research and Technology (NCRRT)

Dr. Iman Kamel Abo Mourad

Professor of fish Microbiology and Biotechnology, Veterinary
Department, National research center

Approval Sheet

Using Irradiated Microbial Biomat For Bioremediation Of Fish Aquaculture Water

By

Marwa Gamal El Den Afifi

Microbiology Department, National Center for
Radiation Research and Technology (NCRRT)

Thesis for Master degree has been approved by:

Dr. Mohamed A. Abouzeid

Professor of Microbiology, Faculty of Science,
Ain-Shams University.

Dr. Eman Hussein Ashour

Professor of Microbiology,
Head of Microbiology Department,
Faculty of Agriculture, Mansoura University.

Dr. Rawia Fathi Mahmoud Gamal

Professor of Microbiology,
Faculty of Agriculture, Ain Shams University.

Dr. Ola Mohamed Gomaa

Professor of Microbial Biotechnology,
National Center for Radiation
Research and Technology (NCRRT)

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

فَلْيَسِّرْ لَنَا الْيُسْرَى
وَلْيَسِّرْ لَنَا الْيُسْرَى
وَلْيَسِّرْ لَنَا الْيُسْرَى
وَلْيَسِّرْ لَنَا الْيُسْرَى

صَدَقَ اللَّهُ الْعَظِيمَ

DEDICATION

I dedicate this work to whom my heartfelt thanks; to my husband Mohamed and my sons Eyad and Hamza for their patience and help, as well as to my dear parents, brother Mohamed and my sisters Mona, Maryam for all the support they lovely offered along the period of my post-graduation. Also, I would like to thank my colleague Heba Hamed, Assistant Lecturer at (NCRRT) for her kind help and encouragement. Finally, I would thank my dear friend May for her support.

Marwa Gamal

ACKNOWLEDGMENT

First, I thank "GOD", the Beneficent, the Merciful, for my success in the completion of this work.

My sincere gratitude is due to the late Professor, Dr. Al Zahraa Ahmed Karam El Den, Professor of Microbiology, Faculty of Science, Ain Shams University Who although not among us, yet she continues to inspire us. I will never forget her kind assistance, support, patience, sincere advice, encouragement and helpful supervision. My utmost thanks to Dr. Mohamed Montaser Abouzeid, Professor of Microbiology, and Vice dean, Faculty of Science, Ain Shams University, for his assistance, kind support, helpful supervision, valuable discussion during all stages of fulfillment of the thesis, encouragement and continuous guidance.

I wish to express my sincere thanks and gratitude to Dr. Hussein Abd El Kareem Professor of Microbiology, National Center for Radiation Research and Technology (NCRRT), for supervising the present work, great encouragement, continuous guidance, invaluable advices and valuable critical reading and revising the manuscript. I also like to thank him for giving me the chance to learn.

I would also like to thank Dr. Iman Kamel Abo Mourad Professor and Head of fish Microbiology and Biotechnology,

Veterinary Department at National Research Center for her continuous guidance, constructive criticism, ultimate help, encouragement, keen supervision and great efforts during all stages of this work.

I am deeply grateful also to Dr. Ola Mohammed Gomaa Professor of Microbial Biotechnology, Head of Microbiology Department, National Center for Radiation Research and Technology (NCRRT), who suggested the point of research, for her effective supervision, fruitful discussion and valuable advice. She has guided me into this field and continuously helped and encouraged me during the whole work.

I'm deeply grateful to my colleagues at (NCRRT) and special thanks to my lab mates.

Sincere thanks to all the members of Microbiology Department, Faculty of Science, Ain Shams University. Great thanks to everyone who offered me help and assistance.

List of content

Title	Page No.
List of content	IX
List of Tables	XII
List of Figures	XIII
Abstract	XVI
1- Introduction	1
Aim of work	4
2- Literature of Review	5
2.1. What is Aquaculture?	5
2.2. Aquaculture and Sustainable Development Goals (SDGs):	5
2.3. Food security and human nutrition:.....	7
2.4. The impact of climate changes on aquaculture:	8
2.5. Aquaculture in Egypt:	9
2.6. The general problems of the aquaculture industry in Egypt:.....	11
2.6.1. Water quality	12
2.6.2. Nitrogenous compounds:.....	12
2.6.3. Bacterial diseases of fish:	13
2.6.4. Fungal diseases of fish:	13
2.6.5. Heavy metal pollution:	15
2.7. Common treatment techniques used for solving aquaculture problems:.....	17
2.8. Bioremediation of aquaculture water:	20
2.8.1. Biocontrol of fish diseases:	20
2.8.2. Bioremoval of heavy metal:	28
2.9 Application of circular economy for bioremediation of fish aquaculture water:	36
2.10 Role of radiation in this study:	37
3-Materials and Methods	39
3.1. <i>Trichoderma</i> strains.....	42
3.2. Antagonistic activity of three different <i>Trichoderma</i> strains Dual culture technique	42
3.3. Confirmation of the selected strain (T_1) microscopically.....	43
3.4. Antagonistic activity of <i>T. viride</i> (T_1) culture filtrate	43
3.5. Antagonistic activity of boiled <i>T. viride</i> (T_1) culture filtrate	44
3.6. Factors affecting the activity of <i>T. viride</i> (T_1) culture filtrate	45
3.6. 1. Temperature	45
3.6. 2. pH	45
3.6.3. Incubation period	46
3.6.4. Agitation	46
3.6.5. Different media	47

3.7. Extraction of <i>T. viride</i> (T_1) metabolites	47
3.8. Analysis of <i>T. viride</i> (T_1) culture filtrate extract.....	48
3.8. 1. Fourier Transform Infrared Spectroscopy (FT-IR) for <i>T. viride</i> extract..	48
3.8. 2. Liquid Chromatography Mass Spectrometry (LC/ ESI/MS)	48
3.8.3 Elemental analysis	49
3.9. Study of some stress response and apoptosis hallmarks in <i>A. niger</i> after incubation with <i>T. viride</i> (T_1)	49
3.9.1. Estimation of total protein content in <i>A. niger</i>	49
3.9. 2. Lipid peroxidation in <i>A. niger</i> after incubation with <i>T. viride</i> culture filtrate	51
3.9. 3. Measuring catalase activity	52
3.9.4. Measuring mitochondrial stress using MitoTracker assay.....	53
3.9. 5. Caspase-3 assay in <i>A. niger</i>	54
3.11. Biomat preparation and fungal immobilization	56
3.12. Testing ability of <i>T. viride</i> to immobilize synthetic luffah	57
3.13. Lead removal using fungal biomat.....	57
3.14. Factors affecting lead removal by <i>T. viride</i>	58
3.14. 1. Lead concentration.....	58
3.14.2. Contact time.....	58
3.14.3. Temperature:	58
3.14.4. pH	59
3.15. Pretreatment of <i>T. viride</i> immobilized biomats	59
3.16. Energy Dispersive X-ray (EDX)	60
3.17. Fourier Transform Infrared Spectroscopy (FT-IR).....	60
3.18. Scanning Electron Microscopy (SEM)	61
3.19. Lead removal by fixed bed column	61
3.20. Immobilized fungal biomat adsorptive capacity	61
3.21. Lead removal from real aquaculture using live, dead fungal biomat and loose fungal pellets.....	62
3.22. Desorption studies and reuse ability of <i>T. viride</i> fungal biomat	63
4- Results	64
4.1. <i>Trichoderma</i> strains.....	64
4.2. Screening of antagonistic activity of the three <i>Trichoderma</i> strains using dual culture technique.....	64
4.3. confirmation of strain <i>T. viride</i> T_1 microscopically	66
4.4. Antagonistic activity of <i>T. viride</i> (T_1) culture filtrate on <i>A. niger</i> :.....	66
4.5. Studying the nature of <i>T. viride</i> (T_1) culture filtrate.....	68
4.6. Factors affecting the activity of <i>T. viride</i> (T_1) culture filtrate	69
4.6.1. Temperature	69
4.6.2. pH.....	70
4.6.3. Incubation period:	71
4.6.4. Agitation.....	72
4.6.5. Effect of different media.....	73
4.7. Studying nature of <i>T. viride</i> (T_1) culture filtrate	74

4.7.1. FT-IR.....	74
4.7.2. Mass spectrometry of ethanolic extract of <i>T. viride</i> (T_1) (LC/ESI/MS): ..	76
4.8. Study of some biochemical changes in <i>A. niger</i> after incubation with <i>T. viride</i> (T_1) culture filtrate.....	77
4.8.1. Estimation of total protein amount in <i>A. niger</i>	77
4.8.2. Lipid peroxidation:	78
4.8.3. Catalase activity.....	79
4.8.4. MitoTracker assay	80
4.8.5. Caspase-3	81
4.9. Examining the effect of ethanolic <i>T. viride</i> culture filtrate on <i>Tilapia</i> fish blood by comet assay	82
4.10. Immobilized fungal biomat preparation	84
4.11. Testing ability of <i>T. viride</i> (T_1) to immobilize synthetic luffah.....	84
4.12. Factors affecting lead removal by <i>T. viride</i> (T_1) biomat	85
4.12.1. Initial metal concentration	85
4.12.2. Temperature	86
4.12.3. pH	87
4.12.4. Contact time	88
4.13. Pretreatment of <i>T. viride</i> (T_1) biomat by exposing to gamma radiation and alkali treatment.....	90
4.14. Energy Dispersive X-ray (EDX)	92
4.15. FT-IR characterization	95
4.16. FT-IR for alkali treated & untreated fungal biomats in comparison with irradiated biomat.	100
4.17. Lead removal by fixed bed column	101
4.18. Immobilized fungal biomat adsorptive capacity.....	102
4.19. Scanning Electron Microscope (SEM)	102
4.20. Lead removal from real aquaculture using live, dead fungal biomat and loose fungal pellets.....	104
4.21. Desorption and reuse of <i>T. viride</i> biomat.....	105
Discussion.....	107
