APPROVAL SHEET

Thesis title: Design, Synthesis and electronic structural studies of some symmetrical and unsymmetrical phthalocyanines for photo-electrochemical applications.

Name of candidate: Basma Salah Mohamed Ghazal

This thesis has been approved by:

Thesis Advisors	Thesis Approved
Prof. Dr. Ahmed Said Ahmed Youssef Professor of Organic Chemistry-Faculty of Science- Ain Shams University	
Dr. Ewies F. Ewies Ass. Professor of Organic Chemistry- National Research Centre	
Prof. Dr. Saad A. Makhseed Professor of Organic Chemistry- Faculty of Science- Kuwait University	

Head of Chemistry Department

Prof. Dr. Ayman Ayoub Abdel-Shafi

Acknowledgment

My first and most important acknowledgement goes to my God for all that I achieved now. If one were to consider the significant milestones in their own lives, it would become necessary also to consider those who have made these milestones possible. Here, I will do my best to acknowledge the people who have made this thesis a reality.

I would like to begin by thanking my advisor Prof. Ahmed Said Youssef for the continuous support of my Ph.D. study and research, for his patience, and motivation. I have been extremely lucky to have a supervisor who cared so much about my work, thank you for your advice on both research as well as on my career have been invaluable.

Also, the acknowledge is extended to my advisor and mentor, Prof. Saad Makhseed, for his persistence, guidance, and advice. Prof. Makhseed offers to his students not only his scientific input and mentoring support but provides an example of someone who has truly found their calling in life. Prof. Makhseed demonstrates this daily with passion for his work that exceeds that which I have ever experienced in any of my colleagues or peers. I would like to thank Prof. Makhseed, the person who gave me all the scientific and moral support, whom I consider him the most affected person in my life, and I am honored to be now one of his students.

Also, I would like to express my deepest gratitude to my advisor Dr. Ewies, for his excellent guidance, caring, patience, and providing me with an excellent atmosphere for organizing research.

There are many individuals with whom I have directly worked in the lab who deserve my sincere gratitude: To Prof. Tomás Torres, Prof. Mahmut Durmuş, Prof. Viktor Nemykin, Dr. Ali Hussain, Dr. Ali Shuaib, Prof. Nageh Allam, Dr. Waleed, Ms. Lubna Salah, Mrs. Hend Sesa, Dr. Ahmed Abdel Nazeer, Dr. Asaithampi Ganesan and Mrs. Mayada Samir, who do not save any effort to help me to introduce my Ph.D. thesis in this good manner, thank you so very much for their support, encouragement and love. I am praying to God day and night to keep you with me forever and to be witness to my success.

I wish to thank my family for their support and encouragement. To my parents, I thank them for the values that you have instilled in me. Thank you for your encouragement and confidence, my parents always wanted me to become a doctor, so I hope this is good enough. To my brothers, Nourhan, Marwa, Mohammed, Tamer, Asmaa, and Manar for their prayers, love, and support. I hope I have provided for you an example of persistence.

I like to extend my love before thanks to my husband Metwally Madkour where he was always beside me throughout this difficult journey. It would be difficult to overcome these difficulties and I hope that we will remain together with our flowers Ahmed and Jana throughout my life and will be a witness for his success and I will be beside him always.

Thesis summary	1
Chapter 1: Introduction.	4
1.1 Structure of phthalocyanines.	4
1.2 Synthesis pathway of Phthalocyanines.	9
1.2.1 General Methods.	9
1.3 Electronic structure of phthalocyanine.	18
1.3.1 Molecular Orbital Description	18
1.3.2 The nature of electronically excited states.	20
1.3.3 Singlet oxygen:	37
1.4 Applications of phthalocyanines.	42
1.4.1 Photosensitization (Photodynamic therapy).	43
1.4.2 Photovoltaics (Solar Cells).	46
1.5 General objectives	56
Chapter 2: Experimental section.	58
2.1 Instrumentation.....	58
2.1.1 General characterization methods.....	58
2.1.2 General background for photophysical spectroscopic methods.....	59
2.2 Computational details	68
2.3 Photovoltaics	68
2.4 Syntheses	71
2.4.1 Reagents.....	71
2.4.2 Synthesis of novel triazolyl compounds	72
2.4.3 Synthesis of novel carbazolyl compounds.....	93
Chapter 3: Symmetrical and Unsymmetrical Triazolyl Phthalocyanine for PDT Application.	104
3.1 Abstract:.....	104
3.2 Background.....	106
3.3 Synthesis and Characterization of Symmetrical and Unsymmetrical Triazolyl Pcs.....	108

3.3.1	Synthesis and characterization of Symmetrical triazolyl A4 Pcs (Metal free, Mg and Zn complexes):.....	109
3.3.2	Synthesis and characterization of Symmetrical Triazolyl A4 Pc (studying the Heavy atom effect; Indium(III) Pcs): ²²²	113
3.3.3	Synthesis and characterization of Unsymmetrical Triazolyl Pcs (A4,A3B,A2B and B4):	116
3.4	Spectroscopic and Photophysical characterization.....	118
3.4.1	Spectroscopic and Photophysical characterization of Symmetrical Triazolyl A4 Pcs (Metal free, Mg and Zn complexes):.....	118
3.4.2	Spectroscopic and Photophysical characterization of Symmetrical Triazolyl A4 Pc (studying the Heavy atom effect; Indium(III) Pcs):	124
3.4.3	Spectroscopic and Photophysical characterization of unsymmetrical Triazolyl Pcs (A4, A3B, A2B and B4):.....	134
3.5	Photodynamic activity of some selected symmetrical Pcs.	146
3.6	Conclusion.....	157
Chapter 4:	Symmetrical and Unsymmetrical Carbazolyl Phthalocyanine for Solar Cell Application.....	160
4.1	Abstract:.....	160
4.2	Background.....	162
4.3	Synthesis and Characterization of Symmetrical and Unsymmetrical carbazolyl Pcs.	164
4.3.1	Synthesis and characterization of Symmetrical carbazolyl A4 Pcs:	165
4.3.2	Synthesis and characterization of unsymmetrical carbazolyl A3B Pc for Solar Cell application:	170
4.3.3	Synthesis and characterization of unsymmetrical carbazolyl A3B (Pc-SubPc):	172
4.4	Spectroscopic and Photophysical characterization.....	174
4.4.1	Spectroscopic and Photophysical characterization of carbazolyl Symmetrical A4 Pcs:	174
4.3.1	Spectroscopic and Photophysical characterization of unsymmetrical carbazolyl A3B Pc for Solar Cell application.	182
4.3.2	Spectroscopic and Photophysical characterization of unsymmetrical carbazolyl A3B (Pc-SubPc):.....	189
4.5	Conclusion.....	189
Appendix.....		191

Figure 3.5. Absorption spectra of the studied Pc derivatives in DMF (black) and in cell culture medium (red) at a concentration of 1 μ M. Spectra were normalized to the same absorption in the B-band. Dashed lines represent spectra collected 1 h after sample preparation. A) 4 , B) 5 , C) 6 , D) 7 , E) time-lapse spectral changes of 7 in cell culture medium over 3 h, F) 8 . Samples of water-insoluble compounds 4-6 in cell culture medium were prepared from a 300 μ M DMF stock solution.	119
Figure 3.6. UV-Vis absorption spectra of 9 (A), 10 (B) in DMF and 10 (C) in water at different concentrations ranging from 1 to 9 μ M. Inset: dependence of the extinction coefficient at λ_{max} 690 nm for 9 and λ_{max} 681 nm for 10 .	124
Figure 3.7. Normalized absorption (black, dashed), excitation (red), and emission (navy) spectra of (A) 9 in DMF; (B) 10 in DMF and (C) 18 in water.	126

- Figure 3.8.** The fluorescence decay of (A) **9** in DMF; (B) **10** in DMF and (C) **10** in water. The emission wavelength is 700 nm, excitation wavelength is 620 nm (Fianium laser), at concentration $\sim 20 \mu\text{M}$ 128
- Figure 3.9.** NIR Photoluminescence spectra of singlet oxygen $^1\text{O}_2$ ($^1\Delta_g$) for water soluble quaternized complexes **8**, **9** and **10** in D_2O . The emission decayed at 1277 nm, excited by Xenon lamp at 365 nm with $A_{\text{max}} \sim 0.5$ 129
- Figure 3.10.** Absorbance changes during the determination of singlet oxygen quantum yield for (A) **9** and (B) **10** complexes in DMF at concentration of $20 \mu\text{M}$. (Inset: Plots of DPBF absorbance versus time). 130
- Figure 3.11.** Nanosecond time-resolve transient difference absorption spectra of (A) **9** and (B) **10**; Decay trace in argon saturated solution of (C) **9** at 515 nm and (D) of **10** at 515 nm; Decay trace in air saturated solution of (E) **9** at 515 nm and (F) of **10** at 515 nm. 133
- Figure 3.12.** UV-vis spectra of (A) the non-quaternized Pc complexes **11-13** in DMF, and (B) and (C) the quaternized Pc complexes **14-16** in DMF and water, respectively at a concentration of $2 \times 10^{-6} \text{ M}$ 135
- Figure 3.13.** Schematic illustration of Slipped-cofacial dimer for complex **16**. 136
- Figure 3.14.** Normalized absorption (black dashed lines), excitation (red solid lines), and emission (navy solid lines) spectra of the quaternized Pc complexes (**14-16**) in (A-C) DMF and (D-F) water: (A) and (D) **14**, (B) and (E) **15**, and (C) and (F) **16**. 138
- Figure 3.15.** Absorbance changes during the determination of singlet oxygen quantum yield for the non-quaternized Pc complexes (**11-13**): (A) **11**, (B) **12**, (C) **13** and **ZnPc** reference (D) in DMF at a concentration of $2 \mu\text{M}$. (Inset: Plots of DPBF absorbance versus time). 143
- Figure 3.16.** NIR luminescence of singlet oxygen $^1\text{O}_2$ ($^1\Delta_g$), for complexes **19-21** and **8** and **4I** (A) and for **22-24** and **10** (B) in air saturated DMF solutions, the emission decays at 1277 nm (A) and 1275 nm (B). 145
- Figure 3.17.** Absorption spectra of **24** in partition coefficient experiment in n-octanol (black) and H_2O (red), (A) and Log P changes versus the number of substituted iodine for complexes **22-24**, (B). 145
- Figure 3.18.** Photodynamic activity ($\lambda > 570 \text{ nm}$, 12.4 mW cm^{-2} , 15 min, 11.2 J cm^{-2} ; full lines and full symbols) and dark toxicity (dashed lines and open symbols) in HeLa cells of **4** (orange, rhombus), **5** (blue, circle), **6** (green, square) compared to other aza-Pc reported analogues. At least five independent experiments, each in quadruplicate, were typically performed. 148
- Figure 3.19.** Cellular uptake of compounds **4** (orange, rhombus), **6** (green, square) and **8** (red, triangle) by HeLa cells after incubation with a concentration of $4 \mu\text{M}$ (for **6** and **8**) or $1 \mu\text{M}$ (for **6**) of the dye. The experiments were performed in duplicate. 150
- Figure 3.20.** Subcellular localization of compound **8** (red) in HeLa cells. A – MitoTracker (green) and LysoTracker (blue). C – ER-Tracker (green) and GALNT2-RFP (blue). E – Proteins specific for the endolysosomal compartment, Rab7a-GFP (green) and Lamp1-RFP (blue). B, D, F – corresponding fluorescence intensity profiles. 152
- Figure 3.21.** Morphological changes induced by the photodynamic activity of **8**. Changes in general cellular morphology – DIC (I-L), cytoskeleton (A-D, red – actin, green –

tubulin), mitochondria (E-H, red), endoplasmic reticulum (E-H, green) and nuclei (A-H, blue).	153
Figure 3.22. Flow cytometry assessment of HeLa cell death induced by the photodynamic action of 10 analyzed at different times after irradiation (20 min, 1 h, 3 h, 6 h, 24 h) at concentrations corresponding to the EC ₁₅ and the EC ₈₅ , expressed as the cell count based on Annexin V–Alexa Fluor 488 and/or PI positivity. Non-apoptotic cells (green), apoptotic cells (orange), and late apoptotic/necrotic cells (red). The experiments were performed in triplicate. *, p < 0.05; **, p < 0.01; ***, p < 0.001.	155
Figure 3.23. Changes in fluorescence intensity of (A) cationic compounds 7 (blue, circle, λ_{em} = 692 nm), 8 (green, square, λ_{em} = 691 nm) in compare with other published analogues (red, triangle, λ_{em} = 642 nm) and (B) non-quaternized 6 (orange, rhombus, λ_{em} = 688 nm) after the addition of FBS to the serum-free cell culture medium. The dye concentration was 1 μ M. Vertical dashed line indicates the typical amount of FBS in cell culture media.....	156
