STUDY ON DUALITY OF PARAMETRIC MATHEMATICAL PROGRAMMING

B18468

A THESIS

SUBMITTED IN PARTIAL FULFILMENT OF THE REQUIREMENTS FOR
THE AWARD OF THE DEGREE MASTER OF SCIENCE

IN

◀ PURE MATHEMATICS ▶

BY

ASHGAN SHEBL EMAM WAHBA

B. SC. Science (Mathematics) 1992

Tanta University
Faculty of Science
Department of Mathematics

SUPERVISORS

Prof. Dr.
ABOU-ZAID HAMOUDA EL-BANNA,
Professor of Pure Mathematics,
Faculty of Science,
Tanta University

Dr.
EL-SAID IBRAHIM AMMAR,
Lecture of Pure Mathematics,
Faculty of Science,
Tanta University

Head of Mathematics Department

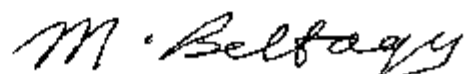

(Prof. Dr. M. Beltagy)

CURRICULUME VITAE

Name : Ashgan Shebl Enam Wahba.
Date of Birth : 31/1/1971.
Locality : Ahmed Samy Street, Tanta, Egypt.
Nationality : Egyptian.
Primary School : El-Etehad Primary School (1982).
Preparatory School : Berket El-Sabia Preparatory School (1985).
Secondary School : El-Sayed El-badway Secondary School (1988).
University : Faculty of Science, Tanta University (1992).

Head of Mathematics Department

(Prof. Dr. M. Beltagy)

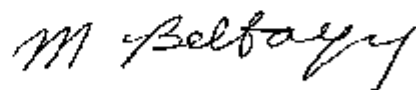

POSTGRADUATE STUDIES

The present thesis is submitted to Tanta University in partial fulfillment of requirements of the degree of Master of Science in Pure Mathematics. Beside the research work introduced in this thesis, the candidate has attended four postgraduate courses beside the language course within two academic years including the following courses :

- 1- Abstract Algebra.
- 2- Numerical Analysis.
- 3- Partial Differential Equations.
- 4- Functional Analysis.
- 5- German Language.

The applicant Ashgan Shebl Emam Wahba has successfully passed the final examinations (1993-1994) of these courses.

Head of Mathematics Department

(Prof. Dr. M. Beltagy)

TO

Spirit of my parents

My husband

My brother and my sisters

ACKNOWLEDGMENT

All gratitude and thankfulness to almighty **GOD** for guiding and aiding me to bring this work to light.

It is a pleasure to express my deep gratitude to Prof. **Dr. Abou Zaid H. El-Banna**, Professor of Pure Mathematics, Faculty of Science, Tanta University, for suggesting the topics presented in this thesis and for helpful discussion and guidance through his supervision and for his valuable help during the preparation of this thesis.

My sincere thanks to **Dr. El-Said I. Ammar**, Lecturer of Pure Mathematics, for suggesting the topics presented in this thesis and for his supervision during performing this work.

My thanks are also to **Dr. M. Abd El-Hady Kassem** for his valuable help during the review of this thesis.

It is a pleasure to give my thanks to Prof. **Dr. M. S. Osman**, and all colleagues of Osman's operational research school for co-operating between us.

My deep thanks and gratitude to Prof. **Dr. M. B. Abd El-Maksoud**, Head of Mathematics Department and all members of the staff.

Ashgan Shebl

CONTENTS

PREFACE		page i-iv
CHAPTER 1	A survey on theory of single and multiobjective nonlinear programming problems	1
1.1	Convex sets and cones	2
1.2	Convex and generalized convex functions	3
1.3	Constraint qualifications (Co)	5
1.4	Stability in nonlinear programming	6
1.5	Optimality in nonlinear programming problems	7
1.6	Duality in nonlinear programming	9
1.7	Optimality in multiobjective nonlinear programming problems	10
1.8	Duality in multiobjective nonlinear programming problems	17
CHAPTER 2	The duality for parametric nonlinear programming problems with parameters in the objective functions	22
2.1	Duality of differentiable parametric nonlinear programming problems	22
	2.1.1 Problem formulation	22
	2.1.2 The set of feasible parameters	23
	2.1.3 The solvability set	23
	2.1.4 The stability set of first kind	24
	2.1.5 Determination of the stability set of first kind for the duality problem $S_1^d(\bar{x}, \bar{u})$	27
	2.1.6 The stability set of second kind	28
	2.1.7 The stability set of third kind	30
	2.1.8 The stability set of fourth kind	32
2.2	Duality of nondifferentiable parametric nonlinear programming problems	36
	2.2.1 Problem formulation	36
	2.2.2 The set of feasible parameters	37
	2.2.3 The solvability set	37
	2.2.4 The stability set of first kind	38

	2.2.5 The stability set of third kind.....	39
	2.2.6 The stability set of fourth kind.....	41
CHAPTER 3	The duality for parametric nonlinear programming problems with parameters in the constraints.....	42
3.1	Duality of differentiable parametric nonlinear programming problems.....	42
	3.1.1 Problem formulation	42
	3.1.2 The set of feasible parameters.....	43
	3.1.3 The stability set of first kind.....	43
	3.1.4 Determination of the stability set of first kind for the duality problem $S_3^d(\bar{x}, \bar{u})$	45
	3.1.5 The stability set of third kind.....	46
	3.1.6 The stability set of fourth kind.....	47
3.2	Duality of nondifferentiable parametric nonlinear programming problems.....	50
	3.2.1 Problem formulation	50
	3.2.2 The set of feasible parameters.....	51
	3.2.3 The solvability set	51
	3.2.4 The stability set of first kind.....	52
	3.2.5 The stability set of third kind.....	53
	3.2.6 The stability set of fourth kind.....	54
CHAPTER 4	The duality for parametric nonlinear multiobjective programming problems with parameters in the objective functions.....	55
4.1	Duality of differentiable parametric nonlinear multiobjective programming problems.....	55
	4.1.1 Problem formulation	55
	4.1.2 The set of feasible parameters.....	56
	4.1.3 The solvability set	57
	4.1.4 The stability set of first kind.....	58
	4.1.5 Determination of the stability set of first kind for the primal problem $S_5(\bar{x})$	59
	4.1.6 Determination of the stability set of first kind for the duality problem $S_5^d(u^*, \lambda^*, y^*)$	60
	4.1.7 The stability set of third kind.....	62

	4.1.8 The stability set of fourth kind.....	63
4.2	Duality of nondifferentiable parametric nonlinear multiobjective programming problems.....	67
	4.2.1 Problem formulation	68
	4.2.2 The set of feasible parameters.....	71
	4.2.3 The solvability set	71
	4.2.4 The stability set of first kind.....	72
	4.2.5 The stability set of third kind.....	74
	4.2.6 The stability set of fourth kind.....	76
CHAPTER 5	The duality for parametric nonlinear multiobjective programming problems with parameters in the constraints.....	78
5.1	Duality of differentiable parametric nonlinear multiobjective programming problems.....	78
	5.1.1 Problem formulation	78
	5.1.2 The set of feasible parameters.....	80
	5.1.3 The solvability set	80
	5.1.4 The stability set of first kind.....	81
	5.1.5 Determination of the stability set of first kind for the primal problem $S_7(\bar{x})$	83
	5.1.6 Determination of the stability set of first kind for the duality problem $S_7^d(u^*, \lambda^*, y^*)$	84
5.2	Duality of nondifferentiable parametric nonlinear multiobjective programming problems.....	88
	5.2.1 Problem formulation	88
	5.2.2 The set of feasible parameters.....	90
	5.2.3 The solvability set	91
	5.2.4 The stability set of first kind.....	91
	5.2.5 The stability set of third kind.....	93
	5.2.6 The stability set of fourth kind.....	94
5.3	Conculation and points for further research.....	95
	5.3.1 Conculation.....	95

ARABIC SUMMARY	--

PREFACE

PREFACE

Associated with every mathematical programming, called the primal, there is another mathematical programming problem called its dual. These two problems possess very interesting and closely related properties. These properties were discussed in many papers. In the following we shall concentrate on a few of these papers. Mangasarian in [11] (1969) introduced the duality for differentiable nonlinear programming problem and introduced the weak, the Wolfe's and the strict converse duality theorems. Osman, M. in [14] (1977) presented a qualitative analysis of basic notions such as the set of feasible parameters, the solvability set and the stability sets of the first and second kind for parametric convex programming problem with parameters in the constraints, also he introduced the dual problem of it, and defined the solvability set for the dual problem. And he proved that the solvability set of the primary problem equals the solvability set of its dual under some conditions. Schechter, M. in [24] (1979) extended the duality theorem of Wolfe [25] for nonlinear differential programming to the nondifferentiable case by replacing gradients by subgradients and he proved the converse duality theorem. Recently, a number of different duals for differentiable mathematical programs have been proposed by Mond and Weir in [12] (1981). The advantage of duals presented in [12] is that they allow the weakening of the usual convexity hypothesis needed for Wolfe duality [25] to hold. Osman, M. and el. in [16] (1986) introduced the same notions which were introduced in
