EFFECT OF ANGLES AND SIDES ON STRENGTHENING GEODETIC NETWORKS

THESIS
Submitted to Faculty of Engineering
Shoubra - Zagazig University

FOR

The Degree of Master of Science
In Surveying

BY

Eng. Manal Atif Abd EL Rhim EL Habashy

B. Sc. (Shoubra Faculty of Engineering.
Banha Branch - Zagazig University 1989)

Under Supervision of

Prof. Dr. Saad Zaki Bolbol
Prof. of Surveying and Geodesy
Head of Surveying Department of
Shoubra Faculty of Engineering ,
Banha Branch – zagazig University

Prof. Dr. Mahmoud Mohamed Hamed
Dean of Faculty of Engineering "Shoubra"
Prof. of Surveying and
Photogrametry

Dr. Youssef Abu EL-Abbas Youssef
Lecturer of Surveying and Geodesy
Zagazig University

2001

Abstract

Surveying is very important for determine the position of points on the earth's surface. This is done through a geodetic network which is depending maily on the linear measurements (base line) and the angular measurements (angles). The accuracy of any surveying work is depending on the accuracy of linear and angular measurements. So, in this thesis, the effect of the value of lines and angles on each other and their effects on the final coordinates of points are studded. If the value of angles and distance are small then there is a problem in calculation, which is known in surveying ill geometry. All cases of ill geometry are studded to be known even the measurements are taken using the new technology of instruments.

ACKNOWLEDGMENT

A deep grateful and appreciation for a continuous advising and supervision step by step through the thesis goes to ***Prof. Dr. Saad Bolbol.***

I wish to express my sincere appreciation to ***Dr. Mahmoud Mohamed Hamed*** *for the great help and kind caring all along the thesis*

A really heart thankful to ***Dr. Youssef Abu EL-Abbas*** *for giving all the facilities and opportunity for the completion of this thesis.*
