Psychiatric Comorbidity in a Sample of Egyptian Women with Vaginismus

Thesis

Submitted for Partial Fulfillment of M.D. Degree in Psychiatry

Presented by

Omar Yehia Mohamed ElSayed Mansour

M.Sc. of Neuropsychiatry

Faculty of Medicine - Ain Shams University

Under Supervision of

Prof. Dr. Ahmed Saad Mohamed

Professor of Psychiatry

Faculty of Medicine - Ain Shams University

Prof. Dr. Mohamed Fekry Abd ElAziz

Professor of Psychiatry

Faculty of Medicine - Ain Shams University

Dr. Hanan Hany ElRassas

Assistant Professor of Psychiatry

Faculty of Medicine - Ain Shams University

Dr. Hussien Ahmed ElKholy

Assistant Professor of Psychiatry

Faculty of Medicine - Ain Shams University

Dr. Lobna AboBakr Ismail Azzam

Lecturer of Psychiatry

Faculty of Medicine - Ain Shams University

Faculty of Medicine

Ain Shams University

2022

دراسة الإضطرابات النفسية المصاحبة للتشنج المهبلي في عينة من المريضات المصريات

رسالة

توطئة للحصول علي درجة الدكتوراه في الطب النفسي
مقدمة من

الطبيب / عمر يحيى محمد السيد منصور

ماجستير طب المخ والأعصاب والطب النفسي - جامعة عين شمس

تحت إشراف

أ.د/ أحمد سعد محمد

أستاذ الطب النفسي

كلية الطب- جامعة عين شمس

أ.د/ محمد فكري عبدالعزيز

أستاذ الطب النفسي

كلية الطب- جامعة عين شمس

أ.م.د/ حنان هاني الرصاص

أستاذ مساعد الطب النفسي

كلية الطب- جامعة عين شمس

أ.م.د/ حسين أحمد الخولي

أستاذ مساعد الطب النفسي

كلية الطب- جامعة عين شمس

د/ لبنى أبو بكر إسماعيل عزام

مدرس الطب النفسي

كلية الطب – جامعة عين شمس

كلية الطب

جامعة عين شمس

2022

Acknowledgement

*First and foremost thanks to **ALLAH**, the Most Merciful.*

*I wish to express my deep appreciation and sincere gratitude to **Prof. Dr. Ahmed Saad Mohamed**, Professor of Psychiatry, Faculty of Medicine, Ain Shams University, for his close supervision, valuable instructions, continuous help, patience, advices and guidance. He has generously devoted much of his time and effort for planning and supervision of this study. It was a great honor to me to work under his direct supervision.*

*I am profoundly grateful to **Prof. Dr. Mohamed Fekry Abd ElAziz**, Professor of Psychiatry, Faculty of Medicine, Ain Shams University, for his kind guidance, supplying me with valuable Advice, insights and generous recommendations on this work.*

*My deep appreciation goes to **Dr. Hanan Hany ElRassas**, Assistant Professor of Psychiatry, Faculty of Medicine, Ain Shams University for her continuous support, sincere advice, timely feedback and kind cooperation in all steps of this work.*

*I wish to express my great thanks and gratitude to **Dr. Hussien Ahmed ElKholy**, Assistant Professor of Psychiatry, Faculty of Medicine, Ain Shams University, for his kind supervision, indispensable advice and great help in this work.*

*I am deeply thankful to **Dr. Lobna AboBakr Ismail Azzam**, Lecturer of Psychiatry, Faculty of Medicine, Ain Shams University, for her warm support all through, being keen & responsive and for the efforts and time she has devoted to the accomplishment of this work.*

I was lucky to work under supervision of this great team.

*I also wish to thank **Dr. Fiby Fayez, Dr. Mariam Yehia, Dr. Sarah Abdel Hamid, Dr. Ayat Mazloun & Dr. Iman Dawood** who participated in the blinding part of the work. Without their help, this work would have been much harder.*

Last and not least, I want to thank all my family, my colleagues,, for their valuable help and support.

Finally I would present all my appreciations to my patients without whom this work could not have been completed.

In the memory of

*“They shall grow not old, as
we that are left grow old:
Age shall not weary them,
nor the years condemn.*

*At the going down of the
sun and in the morning we
will remember them.”*

Laurence Binyon

INTRODUCTION

It was 1975 when the World Health Organization (WHO) defined sexual health as “the integration of the somatic, emotional, intellectual and social aspects of sexual being, in ways that are positively enriching and that enhance personality, communication and love” (*WHO, 2002*).

When sexual health among women is disordered, it includes a variety of problems affecting arousal, orgasm, or causing sexual pain that impairs quality of life for them. This is called Female Sexual Dysfunction (FSD) (*Buster, 2012*).

Vaginismus is one of female sexual dysfunctions. It affects the quality of sexual and psychosocial lives of women, influencing the quality of the couple's relationship. The term "Vaginismus" itself was first introduced by *Sims* who described the same previously mentioned definition (*Sims, 1861*).

It is defined as the involuntary spasm of the pelvic muscles surrounding the outer third of the vagina, especially the perineal muscles and the levator ani muscles (*Kaplan, 1974*).

Available studies showed that the worldwide incidence of vaginismus is ranging 1–7%, with considering

that disorder is more in sexually conservative cultures. However, in clinical settings, the incidence may be as high as 5–17% (**Lahaie et al., 2010**).

As for the psychopathology of vaginismus, there were many theories who tried to explain this disorder. Starting by the psychoanalytic schools who consider it a hysterical or conversion symptom due to unresolved psychosexual conflicts in early childhood and considered as a symbolic expression of a specific unconscious intrapsychic conflict (**Reissing et al., 1999**). Then the cognitive behavioral schools postulated the fear-avoidance model where pain is maintained by which high levels of fear of pain and anxiety and catastrophization direct attention to pain triggers. This consequently make women suffering from this condition tend to avoid any activity that may trigger or exacerbate pain (i.e. intercourse). Moreover, the muscle misuse will lead to maintained pain and the condition continues (**Leeuw et al., 2007**).

However, the biological school suggested that poor general pelvic floor muscle control and hypertonicity of the pelvic floor muscle may play a role (**ter Kuile & Reissing, 2014**). Moreover, from the neurobiological aspect, it was found that vaginismus occurs through the internal neural circuit involving an inter-play of at least two-pathway systems, the occipital-limbic-occipital-prefrontal-pelvic-genital and the chronic pain pathways through the genito-spinothalamic-parietal-pre-frontal system. These pathways

interact with the central role of an emotional-regulating amygdala, and other neural loop, i.e. hippocampus and neo-cortex in the core psychopathology of fear, disgust, and sexual avoidance (**Kadir et al., 2018**).

Regarding clinical diagnosis of vaginismus, it used to be in a separate entity in DSM-IV-TR. However, currently it is included with dyspareunia under the umbrella of genito-pelvic pain/penetration disorder in DSM 5 (**Ishak & Tobia, 2013**).

Based upon the patient's history and behavior during a gynecologic examination, vaginismus is graded from grade 1 to grade 5 ranging from mild to severe. The grading system is invented by **Lamont (1978)** which is furthermore modified by **Pacik (2011)**. Also, vaginismus may be either partial or total according to degree of penetration (**Engman et al., 2004**).

However, in Egypt a study was conducted to evaluate the etiology of unconsummated marriage in Egypt. It revealed that the most common factor was psychological disorders, especially performance anxiety, and vaginismus where the latter accounted for 8.4% in cases (**Badran et al., 2006**).

Since, problems related to sexual functioning affect the sense of personal satisfaction and reduce the quality of life; therefore they have a negative impact on the health of the person. However, unfortunately most of the information

found in this search focused on the physical pathology of the disorder and a limited amount was found regarding the psychiatric and behavioral components of the disorder (**Brandenburg & Bitzen, 2009**).

It was found that husbands were twice as likely (26%) to have a sexual dysfunction of their own if their wives had vaginismus rather than an orgasmic dysfunction (**O'Sullivan, 1979**).

Meanwhile, studies showed that the most frequently associated psychiatric disorders with sexual issues are Major Depressive Disorder and Anxiety Disorders (**Reynaert et al., 2010**). As for personality disorders, more cluster A and C characteristics were noticed than cluster B (**Grauvogl et al., 2018**).

Moreover, other factor including Alexithymia is found to be greater in patients with vaginismus than healthy subjects (**Ciocca et al., 2013**).

Finally, the study hypothesizes that *vaginismus* is associated with other psychiatric disorders, personality disorders and traits, and associated factors like (alexithymia, marital distress and distorted sexual knowledge and attitude). It also hypothesizes that it is associated with low the quality of life of its patients.

AIM OF THE WORK

- 1- Assessment of the co-morbidity of different types of psychiatric disorders among vaginismus patients.
- 2- Assessment of different types of personality disorders and traits among vaginismus patients.
- 3- Assessment of the degree of the disagreement between the patients and their partners.
- 4- Assessment of alexithymia among vaginismus patients.
- 5- Assessment of sexual knowledge and attitude of the patients.
- 6- Assessment of quality of life of the patients.
