MONA MAGHRABY

Ain Shams University
Faculty of Science
Department of Biochemistry

Window for Biomarkers in diagnosis of Acute Kidney Injury disease

A Thesis

Submitted as a Partial Fulfillment for the Requirements of the
Degree of Master of Science in Biochemistry

By

Shadwa Mohamed Ali El-Esawy

B.Sc. in Biochemistry/ Chemistry (2013)

Faculty of science, Port Said University

Under supervision of

Prof. Dr. Magdy Mahmoud Mohamed

Professor of Biochemistry

Faculty of Science - Ain Shams University

Dr. Rasha EL-Sherif Hassan

Assistant Professor of Biochemistry

Faculty of Science - Ain Shams University

Dr. Asmaa Mohamed Nabil Eessa

Lecturer of Geriatric Medicine and Gerontology

Faculty of Medicine - Ain Shams University

Biochemistry Department

Faculty of Science

Ain Shams University

2020

Ain Shams University
Faculty of Science
Department of Biochemistry

Student name: Shadwa Mohammad Ali Abd Al-Hameed Al-Essawy

Thesis title: Window for Biomarkers in diagnosis of Acute Kidney Injury disease

Degree name: Master of Science in Biochemistry

Supervision Committee:

Prof. Dr. Magdy Mahmoud Mohamed

Professor of Biochemistry - Department of Biochemistry
Faculty of Sciences - Ain Shams University

Dr. Rasha EL-Sherif Hassan

Assistant Professor of Biochemistry - Department of Biochemistry
Faculty of Sciences - Ain Shams University

Dr. Asmaa Mohamed Nabil Eessa

Lecturer of Geriatrics and Geriatrics - Faculty of Medicine
Ain Shams University

Discussion Committee:

Prof. Mohammad Abbas Shemis

Professor of Biochemistry and Molecular Biology
Tedor Bilharz Research Institute

Prof. Dr. Menha Mahmoud Swellam

Professor of Biochemistry Research - Department of Biochemistry
National Research Centre

Prof. Dr. Magdy Mahmoud Mohamed

Professor of Biochemistry - Department of Biochemistry
Faculty of Sciences - Ain Shams University

Biography

Name: Shadwa Mohamed Ali El-Esawy

Date of Graduation: May 2013

Degree awarded: B. Sc. in Biochemistry/Chemistry 2013

Grade: M. Sc. in Biochemistry

Declaration

I hereby declare that this thesis has not been submitted for a degree at this or any other university, and that the work therein has been done by myself.

Shadwa Mohamed Ali El-Esawy

ACKNOWLEDGEMENT

First of all, I express my deepest thanks and gratitude to *Allah* the omniscient and the most merciful.

I would like to express my deep gratitude to *Prof. Dr. Magdy Mahmoud Mohamed* Professor of Biochemistry, Faculty of Science, Ain Shams University, for his invaluable advices and encouragement during this research.

I can't find the suitable words to express about my deepest grateful to my advisor *Dr. Rasha EL-Sherif Hassan* Associate Professor of Biochemistry, Faculty of Science, Ain Shams University, for her constant professional support, excellent expertise and motivating discussions about research and guiding me through this research.

I would like to thank *Dr. Asmaa Mohamed Nabiel Eessa*, Lecturer of Geriatric Medicine and Gerontology, Faculty of Medicine, Ain Shams University, without her I would not have been able to complete this research, and without her I would not have made it through my master degree.

Finally, not forgetting my family, that also give me continuous support during this study, this vote of thanks also especially goes, to my dear husband *Ahmed Yousry*, my **Father**, my **Brother** and my *lovely Mother*; she was always cheering me up and standing by my side in every step in my life, and also to everyone who encouraged me during this study.

LIST OF CONTENTS

CONTENTS	No.
LIST OF TABLES	I
LIST OF FIGURES	III
LIST OF ABBREVIATIONS	VIII
ABSTRACT	X
 Chapter I:INTRODUCTION ANDAIM OF WORK.....	 1
Chapter II:LITERATURE REVIEW	8
2.1. Kidneys Anatomy, Physiology and function.....	8
2.2. Disorders of the kidney	9
2.3. Definition and Classification of Acute Kidney Injury	9
2.4. Epidemiology of acute kidney injury	13
2.5. Risk Factors Associated with the Development of Acute Kidney Injury	14
2.6. Pathophysiology of Acute kidney injury.....	16
2.7. Inflammatory process in AKI.....	29
2.8 Cell death in the setting of AKI	38
2.9. Diagnosis of Acute Kidney Injury	48
Chapter III: SUBJECTS AND METHODS	81
Chapter IV: RESULTS	119
4.1 Demographic characteristic	120
4.2 Biochemical investigations	122
4.3 Molecular analysis	155
4.4 Correlation analysis	157
4.5. Receiving operating (ROC) curves	161
Chapter V: DISCUSSION.....	168
SUMMARY	188
CONCLUSION	193
REFERENCES.....	194
Arabic Summary	
Arabic Abstract	

LIST OF TABLES

Table	Page
Table (2.1) Different causes of pre-renal, renal and post-renal AKI	15
Table (3.1) SyBR green dye, cDNA synthesis kit and oligonucleotides	101
Table (3.2) qPCR gene-specific primers	102
Table (4.1) Demographic characteristic of the participants	120
Table (4.2a) Serum Creatinine (Scr.mg/dl) levels of AKI patients versus non AKI subjects along 96 hours of ICU admission	123
Table (4.2b) Serum Creatinine (Scr.mg/dl) levels in the total AKI patients and their three subgroups at different studied periods	124
Table (4.3a) Urine creatinine levels (U.Cr mg/dl) in AKI patients versus non AKI subjects along 96 hours of ICU admission	126
Table (4.3b) Urine creatinine levels (u Cr) (mg/dl) in total AKI patients and their subgroups at different studied periods	127
Table (4.4a) Serum urea levels (S. urea) (mg/dl) in AKI patients versus non AKI subjects along 96hours of ICU admission	130
Table (4.4b) Serum urea levels (mg/dl) in total AKI patients and their subgroups at different studied time periods	130
Table (4.5a) Serum Uric Acid levels (mg/dl) in AKI patients versus non AKI subjects along 96 hours of ICU admission	133

Table	Page
Table (4.5b) Serum uric acid levels (mg/dl) in total AKI patients and their subgroups at different studied time periods	133
Table (4.6a) Serum albumin levels (mg/dl) in AKI patients versus non AKI subjects along 96 hours of ICU admission	136
Table (4.6b) Serum Albumin levels (mg/dl) in total AKI patients and their subgroups at different studied time periods	136
Table (4.7a) Serum microalbuminurea levels (µg/dl) in AKI patients versus non AKI subjects along 96 hours of ICU admission	139
Table (4.7b) Serum micro-albuminurea levels (µg/dl) in total AKI patients and their subgroups at different studied time periods	139
Table (4.8a) Albumin/creatinine ratio in AKI patients versus non AKI subjects along 96 hours of ICU admission	142
Table (4.8b) Albumin/creatinine ratio in the total AKI patients and their subgroups at different studied time periods	142
Table (4.9a) Serum KIM-1 (ng/ml) in AKI patients versus non AKI subjects along 96 hours of ICU admission	145
Table (4.9b) Serum KIM-1(ng/ml) in the total AKI patients and their subgroups at different studied time periods	145
Table (4.10a) Urine KIM-1 level (ng/ml) in AKI patients versus non AKI subjects along 96 hours of ICU admission	148

Table	Page
Table (4.10b) Urine KIM-1level (ng/ml) in the total AKI patients and their subgroups at different studied time periods	148
Table (4.11a) Estimated glomerular filtration rate (eGFR) (ml/min/1.73m ²) in AKI patients versus non AKI subjects along 96 hours of ICU admission	151
Table(4.11b) Estimated glomerular filtration rate (ml/min/1.73m ²) in the total AKI patients and their subgroups at different studied time periods	151
Table (4.12) Expression levels of Kim-1, NGAL and NAG in the AKI and non AKI subjects at zero time	153
Table (4.13) Relative quantification of KIM-1, NGAL and NAG in the AKI patients at (0hr,24hr and 48hr) of the admission to the ICU	154

LIST OF FIGURES

Figures		Page
Figures (2.1)	Nephron structure	9
Figures (2.2)	Primary causes of kidney failure	10
Figures (2.3)	RIFLE and AKIN classification for acute kidney injury	12
Figures (2.4)	Relationship between the clinical phases and the cellular phases of ischemic acute kidney injury (AKI), and the temporal impact on organ function as represented by glomerular filtration rate (GFR)	16
Figures (2.5)	Alternation of Regional blood flow following is altered following injury in ischemic AKI	18
Figures (2.6)	Interplay between tubular and vascular injury leading to sustained reductions of GFR in the extension phase of AKI	26
Figures (2.7)	Illustration of the various stages of apoptotic cell death	40
Figures (2.8)	The continuum of renal cell damage	41
Figures (2.9)	Overview of death-signaling pathways in mammalian cells	45
Figures (2.10)	AKI- Markers	49
Figures (2.11)	Formation of creatinine	51
Figures (2.12)	Origin of the old and new biomarkers of acute kidney injury	58
Figures (2.13)	Effects of NGAL on survival, motility, angiogenic, apoptotic and glucose metabolism	79
Figures (2.14)	Advantage and disadvantage of kim-1, NGAL, IL-18 and cystatin c as biomarkers of acute kidney injury	80
Figures (4.1)	The percentage of the participated subjects according to gender	121

Figures	Page
Figures (4.2a)	The trend of serum creatinine level among AKI and non AKI subjects along 96 hours of their admission to ICU 125
Figures (4.2b)	Serum creatinine level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level 125
Figures (4.3a)	The trend of urine creatinine level among AKI and non AKI subjects along 96 hours of their admission to ICU 128
Figures (4.3b)	Urine creatinine level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level 128
Figures (4.4a)	The trend of serum urea level among AKI and non AKI subjects along 96 hours from ICU admission 131
Figures (4.4b)	Serum urea level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level 131
Figures (4.5a)	The trend of serum uric acid level among AKI and non AKI subjects along 96 hours from ICU admission 134
Figures (4.5b)	Serum uric acid level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level 134
Figures (4.6a)	The trend of serum albumin level among AKI and non AKI subjects along 96hours from ICU admission 137
Figures (4.6b)	Serum albumin level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level 137

Figures	Page
Figures (4.7a)	The trend of serum micro-albuminurea level among AKI and non AKI subjects along 96hours from ICU admission
	140
Figures (4.7b)	Serum micro-albuminurea level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level
	140
Figures (4.8a)	The trend of albumin/creatinine ratio in AKI and non AKI subjects along 96hours from ICU admission
	143
Figures (4.8b)	Albumin/creatinine ratio in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline ratio
	143
Figures (4.9a)	The trend of serum KIM-1 level in AKI and non AKI subjects along 96hours from ICU admission
	146
Figures (4.9b)	Serum KIM-1 level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level
	146
Figures (4.10a)	The trend of urineKIM-1 level in AKI and non AKI subjects along 96hours from ICU admission
	149
Figures (4.10b)	Urine KIM-1 level in AKI patients at different periods of ICU hospitalization expressed as (% change) compared to the baseline level
	149
Figures (4.11a)	The trend of eGFR ((ml/min/1.73m ²) in AKI and non AKI subjects along 96hours from ICU admission
