EFFECT OF IN OVO IODIDE INJECTION AND THERMAL MANIPULATION ON SOME IMMUNOPHYSIOLOGICAL TRAITS OF BROILER CHICKS

By

OMNIA SHAWKY MOHAMMED IBRAHIM

B.SC. Agric. Sc. (Animal and Poultry Production) Fac. of Agric., Alexandria Univ. (2008)
M.Sc. Agric. Sc. (Poultry Physiology), Fac. of Agric., Damanhour Univ. (2014)

This thesis for Ph.D. degree has been approved by:

Dr. Abd El- Hamid El-Sayed Abd El- Hamid
Prof. of Poultry Physiology, Faculty of Agriculture, Damanhur
University.

Dr. Ayman Mohamed Hassan Ahmad
Prof. of Poultry Physiology, Faculty of Agriculture, Ain Shams
University.

Dr. Marwa Shaban Sayed Abdo
Associate Professor of Poultry Physiology, Faculty of Agriculture,
Ain Shams University.

Dr. Ibrahim El-Wardany El- Sayed
Prof. Emeritus of Poultry Physiology, Faculty of Agriculture, Ain
Shams University.

Date of Examination: 9/6/2022

EFFECT OF IN OVO IODIDE INJECTION AND THERMAL MANIPULATION ON SOME IMMUNOPHYSIOLOGICAL TRAITS OF BROILER CHICKS

By

OMNIA SHAWKY MOHAMMED IBRAHIM

B.SC. Agric. Sc. (Animal and Poultry Production) Fac. of Agric., Alexandria Univ. (2008)

M.Sc. Agric. Sc. (Poultry Physiology), Fac. of Agric., Damanhour Univ. (2014)

Under the supervision of:

Dr. Ibrahim El-Wardany El- Sayed.

Prof. Emeritus of poultry physiology, Department of poultry production, Faculty of Agriculture, Ain Shams University. (Principal Supervisor).

Dr. Alaa Elsayed Ali Elkomy

Professor of Poultry Physiology, Head of Livestock Department, Arid Lands Research Institute, City for Scientific Research and Technology Applications (CSRTA).

Dr. Marwa Shaban Sayed Abdo.

Associate Professor of Poultry Physiology, Department of Poultry Production, Faculty of Agriculture, Ain Shams University.

ABSTRACT

Omnia Shawky Mohamed Ibrahim: Effect of In Ovo Iodide Injection and Thermal Manipulation on Some Immunophysiological Traits of Broiler Chicks. Unpublished Ph.D. thesis, Department of poultry production, Faculty of Agriculture, Ain Shams University, 2022.

A total of 400 hatching eggs of Ross 308 broiler breeders were numbered and weighed (average 65 ± 0.5 g.) then incubated at 99.8°F and 55% R.H. At the 7th day of incubation eggs were candled and infertile eggs were excluded then fertile eggs were distributed into 3 treated groups (130 eggs/treatment) as follows; C: un-injected eggs (control); and two injected groups with 50 and 100 μl /egg of 0.9 % nano-I (T1 and T2, respectively). The hatched chicks were reared in caged wire floor battery in a controlled environmental room with 23-hour light/ day with luminous intensity 10 lux, for 5 weeks experimental period. The environmental temperature was about 32°C during the first week old and it was gradually reduced by about 2°C weekly until about 24°C at the fourth week up to the end of experiment. At 3rd days age of age chicks were subjected to thermal manipulation (TC) at $38 \pm 1^{\circ}\text{C}$ for 6 hours for three consecutive days (from 3rd to 5th day of age) from 10 A.M. to 4 P.M.

Embryonic mortality, hatchability, chick quality and some anatomical parameters in broiler chickens were investigated. The body weight gain, feed consumption and feed conversion ratio were recorded weekly. At the last week of the experimental period (5th wk.), birds were weighed and slaughtered by cutting the jugular veins of the neck according to the Islamic religion instruction with a sharp knife. The body internal organs were weighed. Some blood constituents were determined. Histological observation was done on thyroid, intestine, thymus and bursa.

Results showed highly significant increase in the total embryonic mortality especially during the mid-stage of incubation (8 to 18 days) in Nano-I-injected groups compared with control groups. Similar trend was recorded in hatchability percentage.

Tona score was significantly higher in control 94% compared with 92% in sham and 84% in nano-I injected eggs. While chick weight, chick length and yolk free body mass % (YFBM%) had no significant differences between all treatments.

Some anatomical observations were noted among the treatments. Duodenum, pancreas, thymus, spleen, and bursa of Fabricius were more developed in chicks that hatched from 50 µl/egg nano-I group compared with those injected by 100 µl/egg Nano-I and control groups and this is very evident in the thyroid glands.

The results indicated that there was a significant effect of the Iodine treatments and the thermal conditioning on the live body weight of 35 day of age (DOA) broiler chickens.

The thyroid hormones T₃ and T₄ affected significantly by the Iodine doses as their levels in the plasma increased by Iodine dose 50 and 100 µl/egg. There wasn't any significant effect of the Iodine doses on the different blood constituents.

It is concluded that, More studies are needed to determine the optimal dose of Nano-I for in Ovo injection in broiler chickens.

Key words: *In Ovo* injection, nano iodine, embryonic mortality, hatchability, chick quality, broiler chickens, thermal conditioning, blood constituents, T₃ hormone and thyroid.

ACKNOWLEDGEMENTS

I'm greatly appreciate the help and support by my principle supervisor **Dr. Ibrahim El-Wardany El-Sayed Hassan**, Professor of Poultry Physiology, Department of Poultry Production, Faculty of Agriculture, Ain Shams University, Egypt, for his keen supervision, encouragement, valuable criticism, suggesting the problem, planning the work, moral assistance during the course of my study and for preparing and reviewing the manuscript to be in the best final form.

Appreciation is also due to **Dr. Alaa Elsayed Ali Elkomy**, Professor of Poultry Physiology, head of Livestock Department, Arid Lands Research Institute, City for Scientific Research and Technology Applications (CSRTA), Alexandria, Egypt, for his valuable criticism, reviewing manuscript and moral assistance for suggesting the problem, planning the work, sincere help, keen supervision and reviewing the manuscript.

I wish to express my deepest appreciation to **Dr. Marwa Shaban Sayed Abdo** Associate Professor of poultry physiology, Department of poultry production, Faculty of Agriculture, Ain Shams University. For her keen supervision and encouragement during the experimental work and writing of this thesis.

My deep gratitude and appreciation are extended to **Dr. Faisal Badri** Associate Professor and **Abdelhamid Ahmed Abdelhamid** teaching assistance of poultry physiology, Department of poultry production, Faculty of Agriculture, Ain Shams University. For their unlimited help in providing facilities.

My best gratitude and appreciation are extended to the soul of my lovely Mother, my father, my Husband, my sons and all my family members for their tender care, moral, inspiration during the tenure of study and for their patience and encouragement until finishing of this work.
