Physics Department

***"Plasma Formation and Ion Beam Extraction for
Materials Modification."***

Thesis submitted by

Safaa Mostafa Ali Mahmoud

*Accelerators and Ion Sources Department
Nuclear Research Center
Atomic Energy Authority*

M.Sc. in nuclear physics, Ain Shams University 2010.

B.Sc. special physics, Helwan University 2005.

Under the Supervision of

Prof.Dr/ Samir Yoshaa Elkhamisy

*Prof. of nuclear physics,
Physics Department Faculty of Science
Ain Shams University.*

Prof.Dr/ Adel Gomaa Helal

*Prof. of Ion Sources and Accelerators
Nuclear Research center, Atomic Energy
Authority.*

Prof. Dr/ Hesham Mohamed El-Sayed

*Prof. of Materials Science,
Physics Department, Faculty of Science
Ain Shams University.*

Prof. Dr/ Hesham El-Khabeary Tawik

*Head of Basic Nuclear Science Division,
Nuclear Research Center, Atomic Energy
Authority.*

Ass.Prof.Dr/ Ahmed Mahmoud Abdel Reheem

*Radiation Physics Department,
National Center for Radiation Research and Technology,
Atomic Energy Authority.*

(2022)

APPROVAL SHEET

Candidate: Safaa Mostafa Ali Mahmoud

Thesis title: Plasma Formation and Ion Beam Extraction for Materials Modification

Degree: Ph. D.

Supervisors

1- Prof. Dr/ Samir Yoshaa

Elkhamisy.....

Prof. of nuclear physics, Physics Department Faculty of Science Ain Shams University.

2- Prof. Dr/ Adel Gomaa

Helal.....

Prof. of Ion Sources and Accelerators Nuclear Research center, Atomic Energy Authority.

3- Prof. Dr/ Hesham Mohamed El-

Sayed.....

Prof. of Materials Science, Physics Department, Faculty of Science Ain Shams University.

4- Prof. Dr/ Hesham El-Khabeary

Tawik.....

Head of Basic Nuclear Science Division, Nuclear Research Center, Atomic Energy Authority.

5- Ass. Prof. Dr/ Ahmed Mahmoud Abdel Reheem

.....

National Center for Radiation Research and Technology, Atomic Energy Authority.

Examination committee

1- Prof. Dr/ Ahmad Jassim Al

Azzawe.....

Professor in the National University of Chilecito / Argentina

2-Prof. Dr/ Yahia Mohamed Mohemed

Abbas.....

Professor Emeritus at Suez Canal university.

3-Prof. Dr/ Hesham Mohamed El-

Sayed.....

Prof. of Materials Science, Physics Department, Faculty of Science Ain Shams University.

4- Prof. Dr/ Hesham El-Khabeary

Tawik.....

Head of Basic Nuclear Science Division, Nuclear Research Center, Atomic Energy Authority.

Graduate Studied

Sector.

Vice Dean of

& Research

ACKNOWLEDGEMENT

I would like to express my gratitude to all those who gave me the possibility to complete this work. First of all, thanks to **Allah S.W.T** for the blessing and opportunity for me to finish this work.

The author is pleased to express his great thanks to **Prof. Dr. Nabel Amin El-Faramawe** , Head of Physics Department, Faculty of Science, Ain Shams University.

I extend my sincere thanks and gratitude to, **Prof. Dr. Samir Yousha El-Khamisy** “**May Allah have mercy on him** “ (Prof. of Nuclear Physics, Faculty of Science, Ain Shams University)for his encouragements and beneficial discussion which helped me during this work and even after his death .

The author is pleased to express her deep appreciation to **Prof. Dr./ Adel Gomaa Helal**, “**May Allah have mercy on him** “ Accelerators and Ion Sources Department, Nuclear Research Center, Atomic Energy Authority for his useful discussions during the first steps of this study.

I would like to express my deepest appreciations and grateful for **prof. Dr./ Hesham Mohamed El-Sayed** (Physics department faculty of Science Ain Shams university) for suggesting the research point, helping, learning. He carried the heavy guidance responsibility during my research journey.

Special thanks to. **Prof.Dr/ Hesham El-Khabeary Tawfik**, Head of Basic Nuclear Science Division, Nuclear Research Center, Atomic Energy Authority for proposing the research program of this work, valuable discussion of this work and thesis preparation which will never be forgotten.

It gives me the greatest pleasure to express my deep thanks to **Assist.Prof. Dr./ Ahmed Mahmoud Abdel Reheem**, (*Radiation Physics Department, National Center for Radiation Research and Technology, Egyptian Atomic Energy Authority*). This work would not have been possible without his guidance and help. His effective supervision helped me to accomplish this thesis.

Sincere thanks and appreciation to prof. Dr/ Wajdy konswa, Ass.prof.Dr/ Sayed Wally, Dr/Hazem ,Dr/Saied Mowad and Dr/ Zeyad Muhammed for their cooperation.

Also I would like to express my deep thanks to my family (My husband, son, daughter, sister, and brothers), my friends and everyone who supported me during this journey.

Finally, I would like to dedicate this work to my parent's souls and asked Allah S W T to Forgive and have mercy upon them.

Abstract	1
Introduction.	4
<u>Chapter (1) Literature Survey</u>	8
 <u>Chapter (2) Theoretical Aspects</u>	28
2.1 Plasma definition and criteria	28
<i>2.1.1 Plasma criteria</i>	
<i>2.1.2 Plasma properties and parameter</i>	29
2.2 Production of positive ions	29
2.3 Electrical discharge	30
2.4 Positive Ion Sources	31
<i>2.4.1 High-Current Ion Sources</i>	30
<i>2.4.2. Multiply-Charged Ion Sources</i>	31
<i>2.4.3 Highly-Charged Ion Sources</i>	32
	33

2.5. The Extracted Ion Beam and Beam Parameters	38
2.6. Ion beam interaction with matter	40
2.7. Origin of Magnet	45
2.8. Magnetic Properties of Materials	45
2.9. Types of Magnetism	48
2.10. Ferrite Nano Particles	49
<i>2.10.1. Spinel ferrite</i>	
2.10.1.1 Crystal structure of spinel ferrites	52
2.10.1.2 Spinel ferrite classification	52
	54
2.11. Theory of Magnetic Moment Interaction	59
<i>2.11.1. Direct Interaction</i>	
<i>2.11.2. Super-Exchange Interaction</i>	
<i>2.11.3. Double Exchange Interaction</i>	60
	60
	60
2.12 Domain theory and mechanism of magnetization process:	
	61
2.12.1 Domain theory	

2.12.2 Magnetization mechanism	61
2.13 Magnetic properties of nano materials	64
2.14. Methods for Synthesis of Nanoparticles	65
2.15. Applications of ferrite Materials	67
2.16. The Fundamental Law of Gamma-Ray Attenuation	70
2.16.1 Photo Electric Effect.	
2.16.2 Compton scattering.	70
2.16.3. Pair Production Process.	
	70
2.17. The Linear, Mass Attenuation Coefficients and Halve Value Layer	71
	72
2.18. Interaction of neutrons with materials.	72
2.18.1 Neutrons absorption and moderation by target material	
2.18.1.1 Neutrons capture interactions (n, γ)	73
2.18.1.2 Neutrons scattering	

2.18.2 NEUTRON CROSS SECTION	74
	74
	74
<u>Chapter (3) Experimental Arrangements</u>	75
3.1 Ion Sources arrangement	77
3.1.1 Vacuum system	77
3.1.2 Design and electric circuit of the modified penning ion source	77
3.1.3 The gas admitting system	77
3.1.4. The operation of the system	78
3.2 Synthesis of ferrite nanoparticle materials	81
3.2.1 Materials	81
3.2.2 Apparatus	82
3.2.3 Synthesis technique	82
3.3 Vibrating Sample Magnetometer [VSM]	83
	83
3.4 Techniques used for measuring structural properties ferrite materials.	85

3.4.1 X- ray Diffraction Measurements	86
3.4.2 FTIR Fourier Transform Infrared spectroscopy	
3.4.3 Transmission Electron Microscopy [Tem] Analysis	
3.4.4 Scan Electron Microscopy [SEM]	
3.5. Setup for measuring attenuation coefficient of the nano ferrite materials using gamma and neutron irradiation.	86
	88
	89
3.5.1.Gamma measurements:	90
3.5.2 Neutrons measurements.	
	91
<u>Chapter (4) Results and Discussion-Ion Source-</u>	92
4.1 - Output ion beam characteristics using different magnetic field intensity	94
4.2 - Determination of the optimum magnetic field intensity using argon gas	

4.3- Determination of the optimum magnetic field intensity distribution around the ion source using argon gas	95
	98
4.4- Discharge and output ion beam characteristics with out and with optimum magnetic field intensity using argon gas	99
4.5-Discharge characteristics at optimum magnetic field intensity and different grid cathode diameter using nitrogen gas	100
4.6- Output ion beam characteristics at optimum magnetic field intensity and different grid cathode diameters using nitrogen gas	102
4.7- Determination of the optimum $D_{\text{grid C}}$ using nitrogen gas	105
4.8- Discharge and output ion beam characteristics at optimum parameters using argon gas	108
4.9- Discharge and output ion beam current characteristics at optimum parameters using hydrogen gas	
4.10- Comparison for output ion beam current at optimum	108

operating parameters using nitrogen, hydrogen and argon gases

4.11 -Effect of negative extraction voltage applied to the extractor electrode and the ions collector plate on the extracted ion beam current using nitrogen, hydrogen and argon gases

111

112

Chapter (5)Results and Discussion-Materials and nuclear properties-

113

Part (I) properties of the nano ferrite material before nitrogen ion beam irradiation.

5.1 5.1. Structural properties of $Pb_xCd_{(1-x)}Fe_2O_4$

115

5.1.1 XRD analysis:

5.1.1.1 Lattice parameter and cation distribution:

116

5.1.1.2 W-H plots crystallite size and micro strain.

5.1.2 Fourier Transform Infrared Spectroscopy (FTIR)

5.1.3 Transmission electron microscope (TEM) imaging

5.1.4 Scanning electron microscope (SEM) imaging

5.2 Magnetic properties of $\text{Pb}_{(1-x)}\text{Cd}_x\text{Fe}_2\text{O}_4$

Part (II) properties of the synthesized material after nitrogen ion beam irradiation

5.3 Theoretical Studies of interaction between nitrogen I_b and synthesis nano ferrite materials by using SRIM Simulations.

5.4 Structural properties of $\text{Pb}_{(1-x)}\text{Cd}_x\text{Fe}_2\text{O}_4$ after nitrogen ion irradiation. 121

121

5.4.1 X- ray Diffraction (XRD) Analysis for NPs after ion irradiation.

122

5.4.1.1. Lattice parameter

124

5.4.1.2. W-H plots crystallite size and micro strain after ion beam irradiation.

125

5.4.2 Fourier Transform Infrared Spectroscopy (FTIR) for nano ferrite samples after ion beam irradiation.

127

5.4.3 Transmission electron microscope (TEM) imaging for

129
