The Role of Haptoglobin Polymorphism in Gene Expression of CD163 Receptors in Obesity

A Thesis submitted by

Mohamed Ibrahim Ali Abd ElAty Madkour

*Lecturer, Medical Lab Sciences department,
College of Health Sciences, University of Sharjah, UAE*

For the Ph.D. Degree in

BIOCHEMISTRY

Under Supervision of

Prof. Naglaa Mostafa Sherif

Assistant Professor Emeritus
of Biochemistry
Biochemistry Department
Faculty of Sciences
Ain Shams University
Egypt.

Dr. Rasha El- Sherif Hassan

Assistant Prof. of Biochemistry
Biochemistry Department
Faculty of Sciences
Ain Shams University
Egypt.

Prof. Samir Mohamed Awadallah

Professor of Clinical Biochemistry
Medical Lab Sciences Department
College of Health Sciences
University of Sharjah
UAE.

Dr. MoezAllIslam Ezzat Faris

Associate Prof. of Clinical
Nutrition and Dietetics
College of Health Sciences
University of Sharjah
UAE.

College of Health Sciences
University of Sharjah
UAE.

Dr. Rasha El- Sherif Hassan

Assistant Prof. of Biochemistry
Biochemistry Department
Faculty of Sciences
Ain Shams University
Egypt.

Dr. MoezAllIslam Ezzat Faris

Associate Prof. of Clinical
Nutrition and Dietetics
College of Health Sciences
University of Sharjah
UAE.

2020

Acknowledgment

Firstly, I wish to express my sincere appreciation to my main supervisor, **Prof. Naglaa Mostafa Sherif**, who has the substance of a genius: she convincingly guided and encouraged me to be professional and do the right thing even when the road got tough. Without her persistent help, the goal of this project would not have been realized.

Moreover, I would like to sincerely thank **Dr. Rasha El-Sherif** for both inspiration to begin this research and encouragements to carry on during a hard time. Furthermore, her insightful comments and encouragement, and for her great questions which incited me to widen my research from various perspectives. Without her precious support, it would not be possible to conduct this research.

Further, I would like to express my sincere gratitude to my advisor **Prof. Samir Awadallah** for the continuous support of my Ph.D. study and related research, for his patience, motivation, and immense knowledge. His guidance helped me in all the time of research and in writing of this thesis. I could not have imagined having a better advisor and mentor for my Ph.D. study than him.

Also, I wish to express my deepest gratitude to **Dr. "Mo'ez Al-Islam Faris**, who provided me an opportunity to join his team, and who gave me the access to the research facilities. Equally important, his great effort in funding this project throughout the University of Sharjah funding system. In addition, to his guidance, attention to all the aspects of the work, as well as critique and assessment, have led this research to its successful and fruitful results.

Besides my advisors, I express my heartfelt thanks and appreciation to **Prof. Saleh Ibrahim, Lubeck University, Germany** for his continuous support and who gave me the golden opportunity to perform the important

practical part of this study in his lab facility, and secondly to **Dr. Haitham Al Jahrami** for his constant help in completing the statistical for this study.

Mohamed Ibrahim Madkour

Biography

Name: Mohamed Ibrahim Ali Abd ElAty Madkour

Graduation year: 2001

Biochemistry/Chemistry,
Faculty of Science – New Damietta, Mansoura University.

M.Sc year: 2007

Biochemistry/Chemistry,
Faculty of Science – New Damietta, Mansoura University.

Scientific Degree: Ph.D.

Department: Biochemistry

Faculty: Faculty of Science

University: Ain Shams

Abstract	1
Introduction	5
Aim of the work	9
Review of literature	10
1. Haptoglobin (Hp)	10
1.1. Hp genetics and molecular structure	11
1.2. Hp Phenotyping	14
1.3. Hp Function	15
1.3.1. Clrearence of free hemoglobin	15
1.3.2. Antioxidant Activity	18
1.3.3. Antibacterial Activity	19
1.3.4. Immunoregulatory Activity	19
1.3.5. Blockade and Inhibition of Nitric Oxide (NO)	21
1.3.6. Angiogenesis and Lymphangiogenesis	22
1.4. Hp as a Diagnostic Marker	23
1.4.1. Elevated Plasma Hp Concentration	23
1.4.2. Decreased Plasma Hp Concentration	24
1.5. Hp Phenotypes and Human Disorders	25
1.5.1. Cardiovascular diseases	26
1.5.2. Diabetes	27
1.5.3. Infectious Diseases	29
1.6. Therapeutic Properties	30
2. Scavenger Receptor CD163	31
2.1. CD163 Structure	31
2.2. CD163 Regulation and Expression	32
2.3. Soluble form of CD163 (sCD163)	34

2.4.	Hp and CD163	35
2.5.	CD163 Receptor Function for Hp-Hb	37
2.6.	Anti-inflammatory Signaling of CD163 by Hp Phenotype	38
3.	Obesity	39
3.1.	Epidemiology	42
3.1.1.	Prevalence and Trends	42
3.2.	Obesity Pathogenesis and Etiological factors	46
3.3.	Environment factors	50
3.4.	Genetic factors	50
3.5.	Psychosocial factors of obesity	51
3.6.	Pathological Changes in Adipose Tissues	52
3.7.	Metabolic and Physiological Effects	54
3.8.	Obesity and inflammation cytokines	57
4.	Antioxidant Enzymes	60
4.1.	Transcription Factor Nuclear factor-Erythroid-related factor 2 (Nrf2)	60
4.2.	Superoxide dismutase (SOD)	61
4.3.	Mitochondrial transcription factor A (TFAM)	63
4.4.	The sirtuin family	65
4.4.1.	SIRT1	65
4.4.2.	SIRT3	65
5.	Intermittent Fasting and Metabolite Effects	68
5.1.	Complete Alternate-day Fasting	70
5.2.	Modified Fasting Regimens	70
5.3.	Time-restricted Feeding	71
5.4.	Religious Fasting outside Ramadan	71
5.5.	Ramadan intermittent fasting (RIF)	72
5.5.1.	Effects of RIF on Weight and Lipid Profile	74
5.5.2.	Effects of RIF on Inflammatory Cytokines	75
5.5.5.	Effects of RIF on Oxidative Stress	77
Subjects and Methods		79
1.	Participant selection	79

2.	Study design	80
3.	Sample size	81
4.	Anthropometric assessment	81
5.	Dietary intake assessment	82
6.	Physical activity level	84
7.	Blood sampling	84
8.	Determination of Hp polymorphism using G-vertical polyacrylamide gel electrophoresis	85
8.1.	Hp phenotyping electrophoresis procedures	87
9.	Chemiluminescence immunoassay (CLIA)	88
10	Glucoregulatory factors and blood pressure measurement	89
11	Determination of serum insulin growth factor-1 (IGF-1), fasting insulin, and sCD163 using ELISA	89
11.1.	Principle	89
11.2.	Assay procedure	90
11.3.	Calculation of results	91
12	Multiplex assay (Bio-Plex Pro™ Human Cytokine plex Assay)	91
12.1.	Principle and technology	91
12.2.	Assay format	92
12.3.	Data acquisition and analysis	93
13	Multiplex reagents preparation for immunoassay	93
13.1.	Preparation of antibody-immobilized beads	93
13.2.	Preparation of quality controls	94
13.3.	Preparation of wash buffer	94
13.4.	Preparation of serum matrix	94
13.5.	Preparation of human cytokine standard	95
13.6.	Multiplex immunoassay procedure	95
13.7.	EQUIPMENT SETTINGS	98
14	Gene expression assay for CD163, Nrf2, SODs, TFAM, SIRT1, and SIRT3 genes	99

14.1.	Quantitative real time PCR protocol	99
14.1.1.	Blood RNA Extraction and purification	99
14.1.2.	Determination of total RNA yield	100
14.1.3.	Reverse transcription into cDNA	100
14.1.4.	Amplifications of the target genes using qPCR technique	101
14.1.5.	Forward and reverse primers for the seven genes examined in this study	101
14.2.	Gene expression calculations	102
15	Statistical analyses	103
Results		104
1.1.	Basic demographic and anthropometric characteristics	104
1.2.	Determination of haptoglobin phenotype in recruited subjects	107
1.3.	Serum levels of glucoregulatory and serum lipid profile parameters	109
1.4.	Measurements of serum haptoglobin, sCD163, and pro- and anti-inflammatory cytokines	111
1.5.	Relative expression of <i>CD163</i> , antioxidant (<i>Nrf2</i> , <i>SOD2</i> , <i>TFAM</i>), and metabolic and cellular regulatory (<i>SIRT1</i> , <i>SIRT3</i>) genes in recruited subjects.	112
1.6.	Demographic and anthropometric characteristics of recruited subjects according to haptoglobin phenotype	114
1.7.	Glucoregulatory parameters and serum lipid profile according to haptoglobin phenotype for the study subjects	117
1.8.	Serum levels of sCD163, haptoglobin, and inflammatory cytokines according to haptoglobin phenotypes	120
1.9.	Relative gene expression of CD163, antioxidant (<i>Nrf2</i> , <i>SOD2</i> , <i>TFAM</i>), and metabolic and cellular regulatory (<i>SIRT1</i> , <i>SIRT3</i>) genes according to the haptoglobin polymorphism	122
2.1.	Anthropometric variables before and at the end of Ramadan fasting	124
2.2.	Changes in dietary intakes before and at the end of Ramadan fasting.	126

2.3.	Glucoregulatory and serum lipid profile parameters before and after Ramadan fasting	128
2.4.	Serum levels of haptoglobin, CD163, and inflammatory cytokines pre- and post-Ramadan	130
2.5.	Changes in relative expressions of CD163, antioxidant (SOD2, Nrf2, TFAM), and metabolic and cellular regulatory (SIRT1, SIRT3) genes before and at the end of Ramadan intermittent fasting	132
3.1.	Anthropometric measurements of overweight and obese subjects based on their haptoglobin polymorphism in response to RIF	134
3.2.	Changes in glucoregulatory and serum lipid profile parameters according to the Hp phenotype before and at the end of Ramadan fasting	141
3.3.	Effect of Ramadan Intermittent fasting on Serum Hp, CD163, and inflammatory cytokine markers according to Hp polymorphism	148
3.4.	Changes in relative expression of CD163, antioxidant (SOD2, Nrf2, TFAM), and metabolic and cellular regulatory (SIRT1, SIRT3) genes before and at the end of Ramadan fasting according to Hp polymorphism phenotype	152
Discussion		158
1.	Association of Hp polymorphism with CD163 gene expression, pro- and anti-inflammatory cytokines, glucoregulatory markers, and general anthropometrics in people with obesity	158
2.	Impact of RIF on Hp serum level, CD163 gene expression, and other measured parameters	176
3.	Interplay between Hp polymorphism and RIF in relation to CD163 gene expression and other measured parameters	188
