GEOLOGICAL AND GEOCHEMICAL STUDIES AND ORE POTENTIALITIES OF THE GABAL EL ATAWI AREA, EASTERN DESERT, EGYPT

A Thesis
**Submitted to the Faculty of Science
Alexandria University**

For
**The Doctor Philosophy Of Science
(Geology)**

By
Mohamed Abd El Fattah Abd El Sallam Obeid

B.Sc. (1981)

M.Sc. (1990)

Supervised by

Prof. Dr. A. M. El Bouseily
Prof. of Geology
Faculty of Science
Alexandria University

Dr. A. A. Dardir
The Egyptian Geological
Survey and Mining Authority
Cairo

Dr. A. I. Arslan
Ass. Prof. of Geology
Faculty of Science
Alexandria University

Dr. F.H.Mohamed
Ass. Prof. of Geology
Faculty of Science
Alexandria University

Dr. M. M. Tamish
Lecturer of Geology
Faculty of Science
Alexandria University

ACKNOWLEDGEMENTS

I would like to thank **Prof. Dr. A.M. Abdel Raheim**, Head of the Geology Department, Faculty of Science, Alexandria University for his support and encouragement.

I wish to express my sincere gratitude to **Prof. Dr. A.M. El Bouseily**, Geology Department, Faculty of Science, Alexandria University. His kind supervision, fatherly patience, liberal assistance, guidance and continuous encouragement during all the steps of this work are greatly acknowledged. I am greatly indebted to **Dr. A.A. Dardir**, The Egyptian Geological Survey and Mining authority, Cairo for his kind supervision and the facilities offered during the field work.

I am cordially grateful to **Ass. Prof. A.I. Arslan** , **Ass. Prof. F.H. Mohamed** and **Dr. M. Tamish**, Geology Department, Faculty of Science, Alexandria University for their helpful supervision, for their advice on a wide range of matter and for their constructive criticism through reading the manuscript.

Analytical work (XRF) was carried out at the Applied Geochemistry Laboratory, Technical University of Berlin, Germany during a study leave of the writer in Germany (from 15 August to 10 October, 1992). Financial support for this study in Germany was given from the Volkswagen Foundation within the framework of geoscience research cooperation "Geochemical-Tectogenetic Parameters of the Apogranite Province in the Nubian Shield in Egypt" between the Technical University of Berlin/FRG, the Mining University of Freiberg/FRG, Alexandria University/Egypt and the Egyptian Geological Survey and Mining Authority/ Cairo.

I would like to express my sincere thanks to PD. Dr. G. Matheis, Economic Geology Department, Technical University of Berlin, Germany for permitting the writer to use all facilities in the Applied Geochemical Laboratory, Technical University of Berlin and for his useful scientific discussions. Special thanks are due to Prof. Dr. W. Schmidt, Institute of Mineralogy, Geochemistry and Economic Geology, Bergakademie, Freiberg, Germany for his kind guidance and valuable assistance offered during my study leave in Freiberg.

I am deeply indebted to all the staff members of the Geology Department, Alexandria University for facilities and contribution in accomplishment of this study. My deepest gratitudes are also extended to my colleagues at The Egyptian Geological Survey and Mining Authority, Cairo and all who helped me in any way either through discussion or during field work.

LIST OF FIGURES	viii

CHAPTER I

1. INTRODUCTION	1
1.1. Geological Statements	1
1.2. Economic Considerations	6

CHAPTER II

2. GEOLOGICAL SETTING	10
2.1. Geology of the El Atawi Area	10
2.2. Previous Work	15
2.3. Scope of the Present Work	17

CHAPTER III

3. FIELD WORK AND LABORATORY TECHNIQUES	18
3.1. Sampling Procedures	18
3.2. Sample Treatment	21
3.3. Mineralogical Analysis	26
3.3.1. Microscopic Investigations	26
3.3.2. X-Ray Diffraction Analysis (XRD)	26
3.3.3. Infrared Spectroscopy (IR)	27
3.4. Chemical Analyses	28
3.4.1. X-Ray Fluorescence (XRF)	28
3.4.2. Wet Chemical Analyses	28
3.5. Statistical Analyses	30
3.5.1. Data Treatments	30
3.5.2. Statistical Parameters	32

CHAPTER IV

4. PETROGRAPHY AND ORE MICROSCOPY	34
4.1. Petrography	34
4.1.1. Serpentinite and Talc-Carbonate Rocks	34
4.1.2. Metasediments	37
4.1.3. Metavolcanics	38
4.1.4. Older Granites	40
4.1.5. Hammamat Group	44
4.1.6. Younger Granites	45
4.1.7. Trachytes	49
4.2. Ore Microscopy	52
4.2.1. Wadi Sitra Chromite Deposit	52
4.2.2. El Atawi Copper Mineralization	56
4.2.3. Panned Concentrates from Proluvial Sediments in the El Atawi Area	60

CHAPTER V

5. MINERALOGY AND GEOCHEMISTRY OF THE SERPENTINITES AND ASSOCIATED CHROMITE DEPOSIT AT WADI SITRA ...	66
5.1. Mineralogy of the Serpentinite Rocks	66
5.1.1. X-Ray Diffraction Study	66
5.1.2. Infrared (IR) Spectra	69
5.2. Geochemistry of the Serpentinites	71
5.2.1. Major Element Characteristics	71
5.2.2. Trace Element Geochemistry	73
5.3. Geochemistry of the Chromite Deposit	73
5.3.1. Chemical Characteristics	75
5.3.2. Chromite Composition	78
5.3.3. Type of Chromite	82
5.3.4. Petrogenesis	84

CHAPTER VI

6. GEOCHEMICAL CHARACTERISTICS OF THE VOLCANIC ROCKS AT THE EL ATAWI AREA	91
6.1. Geochemistry of the Metavolcanic Rocks	92
6.1.1. Magma Type	93
6.1.2. Tectonic Implications	97
6.1.3. Trace Elements Normalization	101
6.2. Geochemistry of the Trachyte Rocks	103
6.2.1. Geochemical Trends	103
6.2.2. Tectonic Environment	106
6.2.3. Trace Elements Normalization	106

CHAPTER VII

7. GEOCHEMICAL AND METALLOGENIC CHARACTERISTICS OF THE GRANITOID ROCKS	110
7.1. Geochemistry of the Granitoid Rocks	110
7.1.1. Major Element Geochemistry	111
7.1.2. Trace Element Geochemistry	118
7.1.3. Chemical Specialization	125
7.1.4. Magma Type	131
7.1.5. Tectonic Implications	134
7.1.6. Petrogenesis	138
7.1.7. Trace Elements Normalization	142
7.2. Post-magmatic Alterations of the El Atawi Specialized Granite	145
7.2.1. Albitization	150
7.2.2. Fluoridization	153

CHAPTER VIII

8. GEOCHEMICAL PROSPECTING FOR RARE METALS AT THE EL ATAWI AREA	157
8.1. Panning Survey	158
8.1.1. Statistical Results	158
8.1.2. Geochemical Maps	159

	Page
8.2. Regional Geochemical Survey Using Stream Sediments	166
8.2.1. Distribution Parameters	166
8.2.2. Correlation Coefficients	169
8.2.3. Geochemical Maps	171
8.3. Bedrock Geochemical Survey	176
8.3.1. Statistical Parameters	177
8.3.2. Correlation Coefficients	181
8.3.3. Factor Analysis	184
8.4. Rare Metals Potentiality	196
 SUMMARY AND CONCLUSIONS	 198
 REFERENCES	 211
 APPENDICES	 235
Appendix 1: Chemical analyses of major oxide and trace element contents in the Wadi Sitra serpentinite samples, compared with other Egyptian serpentinite rocks	235
Appendix 2: Major oxides recalculated on a water-free basis and the C.I.P.W. norms of the analysed serpentinite samples	236
Appendix 3: Chemical analyses of the Wadi Sitra chromite samples	237
Appendix 4: Major oxide and trace element contents in the El Atawi metabasalt samples, compared with similar worldwide rock types	238
Appendix 5: C.I.P.W. norms and Niggli-values of the metabasalt samples at the El Atawi area	239
Appendix 6: Chemical compositoin of the trachyte samples at the El Atawi area compared with some Egyptian and worldwide trachyte rocks . .	240
Appendix 7: C.I.P.W. norms and Niggli-values of the trachyte samples at the El Atawi area	241
Appendix 8: Major oxide and trace element contents in the tonalite and granodiorite samples of Gabal El Shush and Wadi El Miyah . .	242
Appendix 9: Major oxide and trace element contents in the El Atawi granite samples	243
Appendix 10: Major oxide and trace element contents in the Abu Garadi granite samples	245
