Statement

This thesis is submitted to Ain Shams University in partial fulfillment of the requirements for the degree of Master of Science in Computers and Systems Engineering.

The research included in this thesis was carried out by the author at the Computers and Systems Engineering department, Ain Shams University.

No part of this thesis has been submitted for a degree or qualification at any other universities or institutes.

Date : 31 / 12 / 1998

Name : Amr Adel Hassan

عمر عادل عادل المسلم

Student Profile

Name : Amr Adel Hassan

Birth Date : 30 / 10 / 1971 Cairo

Degree

B.Sc. of Computers and Systems Engineering

Online Handwriting Recognition of Arabic Characters Using Fuzzy Rules

Submitted by Eng. Amr Adel Hassan

The objective of this thesis is to discuss the problem Abstract: of Arabic online handwriting recognition and finding techniques to be applied in a system for recognizing Arabic characters and words. At first, the research was focused on the recognition of handwritten isolated Arabic characters and Hindi numerals which are used in our daily life as Arabic numerals. Later on, a preliminary study is carried on the recognition of handwritten Arabic words (which is cursive by its nature). This study results on developing a word segmentation module to be used in word also discussed the needed recognition system. The study modifications on the other modules of the word recognition system to be compatible with the output from the developed word segmentation module. Most of the described techniques are implemented in the developed programs within this thesis.

The major stages of the introduced handwriting recognition system are as follows:

- Pre-processing.
- External (Character) Segmentation.
- Inner Segmentation.
- Segment Classification.
- Character Classification.

A. Schola

The classification (Segment or character) is done with the aid of fuzzy rules. The fuzzy rules simplify the design and provide the ability to extend the rule base easily, which provides the system the ability to extend the set of defined characters to be recognized.

Many ambiguities that exists in handwritten characters can be reduced by the techniques discussed in this thesis. These techniques are flexible enough to overcome the variations of handwriting modes. The flexibility of these techniques permits the recognition system to be able to recognize characters from a new writers.

Keywords: Handwriting Recognition, Fuzzy Logic, Fuzzy-Rule based System

This thesis is submitted in partial fulfillment of the requirements of the degree of Master of Science in Computer and Systems Engineering under supervision of

Dr. Hassan Shehata Bedor

Ass. Prof. in Computer and Systems Engineering Dept.

Faculty Of Engineering

Ain Shams University

Acknowledgment

I would like to express my thanks to:

- Dr. Hassan Shehata for his supervision and advice during the course of this accomplishment.
- *Prof. Dr.* Osman Badr for his advice and support.
- *Prof. Dr.* Ahmed Easa, dean of Industrial Education Faculty, Suez Canal University and all my colleagues for their support during the course of this accomplishment.

I would like to express my gratitude to the ECG Engineering Consultant Group S.A. for all kinds of support during the course of this accomplishment. Especially, I would like to thank my friends in ECG Systems Division for providing the excellent research environment.

I would like to thank all my friends for their cooperation and remarks. Especially, I would like to thank *Eng. Amr Ibrahim* and *Eng. Mohamed El-Zemaity* for their help and technical support.
