MONA MAGHRABY

Ambulatory Blood Pressure Monitoring in a Cohort of Adolescent Egyptian Females

Thesis

*Submitted for Partial Fulfillment
of Master Degree in **Pediatrics***

By

Asmaa Ragab Abdel Wahab

M.B., B.Ch

Faculty of Medicine, Ain Shams University, 2012

Under Supervision of

Prof. Dr. Alyaa Amal Kotby

Professor of Pediatrics

Faculty of Medicine, Ain Shams University

Dr. Marwa Waheed Abdelhady

Lecturer of Pediatrics

Faculty of Medicine, Ain Shams University

Faculty of Medicine
Ain Shams University

2020

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ

سُبْحَانَكَ لَا عِلْمَ لَنَا
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

Acknowledgments

*First and foremost, I feel always indebted to **Allah** the Most Beneficent and Merciful.*

*I wish to express my deepest thanks, gratitude and appreciation to **Prof. Dr. Alyaa Amal Kotby**, Professor of Pediatrics, Faculty of Medicine, Ain Shams University, for her meticulous supervision, kind guidance, valuable instructions and generous help.*

*Special thanks are due to **Dr. Marwa Waheed Abdelhady**, Lecturer of Pediatrics, Faculty of Medicine, Ain Shams University, for her sincere efforts, fruitful encouragement.*

I would like to express my hearty thanks to all my family for their support till this work was completed.

Asmaa Ragab Abdel Wahab

List of Contents

Title	Page No.
List of Tables.....	i
List of Figures	iv
List of Abbreviations.....	viii
Introduction	- 1 -
Aim of the Work	4
Review of Literature	
▪ Pediatric Hypertension	5
▪ Ambulatory Blood Pressure Monitoring.....	56
Patients and Methods.....	77
Results.....	88
Discussion	124
Summary.....	133
Conclusion	137
Recommendations	138
References	139
Arabic Summary	

List of Tables

Table No.	Title	Page No.
Table 1:	Blood Pressure classification in Children and Adolescents	6
Table 2:	Estimated percentage of different Causes of Hypertension in Children and Adolescents	10
Table 3:	Most common causes of secondary pediatric hypertension.....	11
Table 4:	Conditions under which children 3 years old should have BP measured	31
Table 5:	Recommended dimensions for blood pressure cuff bladders	32
Table 6:	Threshold of Girls SBP values by Age and Height	35
Table 7:	Threshold of Boys SBP values by Age and Height	36
Table 8:	Laboratory tests for the child with hypertension.....	39
Table 9:	Antihypertensive Medications with FDA Approval for Use in Children.....	51
Table 10:	Clinical conditions for which specific antihypertensive drug classes are recommended or contraindicated	52
Table 11:	Antihypertensive drugs for hypertensive emergencies and urgencies	54
Table 12:	Normative ABPM values (mmHg) for boys by height (in centimeters).....	63
Table 13:	Normative ABPM values (mmHg) for girls by height (in centimeters).....	64
Table 14:	ABPM parameters in clinical routine and research	66
Table 15:	Suggested staging scheme for ambulatory (or sustained) blood pressure levels in children	69
Table 16:	Demographic data of the studied patients	88

List of Tables cont...

Table No.	Title	Page No.
Table 17:	Comparison between office blood pressure (OBP) during non- stress and in stress of the study population.....	92
Table 18:	Comparison between non- stress and in stress regarding 24h mean ambulatory blood pressure (ABP) of the studied adolescents.....	94
Table 19:	Comparison between daytime mean ABP values at non stress and in stress periods of the studied adolescents.....	96
Table 20:	Night time mean ABP values of the studied adolescents during non -stress and in stress periods.	98
Table 21:	Correlation between anthropometric measures of the studied cases and results of blood pressure during non-stress and stress periods.	99
Table 22:	Correlation between BMI of the studied cases and results of blood pressure during non-stress and stress periods.....	108
Table 23:	Comparison between consanguinity between parents of the studied cases and results of blood pressure during non-stress and stress periods.	110
Table 24:	Comparison between physically active and insufficiently physically active students and results of blood pressure during non-stress and stress periods.....	111
Table 25:	Comparison between students with positive family history vs those without positive family history of hypertension (HTN) as regards results of blood pressure during non-stress and stress periods.....	113

List of Tables cont...

Table No.	Title	Page No.
Table 26:	Comparison between bad dietary habits of the studied cases and results of blood pressure at different time	114
Table 27:	Comparison between school achievement of the studied cases and results of blood pressure at different time	115
Table 28:	Nocturnal dipping and non dipping	116
Table 29:	Nocturnal dipping and non dipping during non stress and in stress	117
Table 30:	Comparison of SBP, DBP in stress and non stress among dippers and non -dippers as regard weight and height.....	118
Table 31:	Comparison of SBP, DBP in stress and non stress among dippers and non -dippers as regard BMI.	119
Table 32:	Comparison of SBP, DBP in stress and non stress among dippers and non -dippers as regard physical activity.....	120
Table 33:	Comparison of SBP, DBP in stress and non -stress among dippers and non -dippers as regard bad dietary habits.	121

List of Figures

Fig. No.	Title	Page No.
Figure 1:	Complications of hypertension: target-organ damage.	25
Figure 2:	How to choose the appropriate cuff size.....	32
Figure 3:	Patient wearing ABPM device	56
Figure 4:	Bplab ambulatory blood pressure monitor for children	80
Figure 5:	Bplab software home page.....	82
Figure 6:	Showing the percentage of healthy, overweight and obese students under the study.....	89
Figure 7:	Showing the percentage of adolescents with consanguineous parents among the studied adolescents.	89
Figure 8:	Showing the percentage of physical activity and insufficiently physical activity among the studied adolescents.....	90
Figure 9:	Showing the percentage of family history of hypertension among the studied adolescents.	90
Figure 10:	Showing the percentage of students with bad dietary habits.....	91
Figure 11:	Showing the percentage of school achievement of the studied group.	91
Figure 12:	Showing the percentage of students with normal, Pre-hypertension, Hypertension by office blood pressure during non-stress and in stress.	92
Figure 13:	Office SBP values of the studied adolescents Showed that there was a highly statistically significant increase in SBP in stress than non- stress.	93

List of Figures cont...

Fig. No.	Title	Page No.
Figure 14:	Office DBP values of the studied adolescents Showed that there was a highly statistically significant increase in DBP in stress than non-stress.	93
Figure 15:	24h mean ABP of the studied adolescents Showed that there was a highly statistically significant increase in 24h mean ABP in stress compared to non- stress.	95
Figure 16:	Showing daytime mean ABP in non- stress compared to stress periods.	97
Figure 17:	Showing daytime mean ABP classification among the studied adolescents in non - stress compared to stress.....	97
Figure 18:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their office non- stress SBP.	100
Figure 19:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their office stress SBP.....	100
Figure 20:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their office stress DBP.	101
Figure 21:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their non- stress24 mean ABP.	101
Figure 22:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their stress 24h mean ABP.....	102

List of Figures *cont...*

Fig. No.	Title	Page No.
Figure 23:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their non- stress daytime mean ABP.	102
Figure 24:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their stress daytime mean ABP.	103
Figure 25:	Showing that there was a statistically significant positive correlation between weight of the studied adolescents and their non-stress nighttime mean ABP.	103
Figure 26:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their office non-stress SBP.	104
Figure 27:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their office stress SBP.	104
Figure 28:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their office stress DBP.	105
Figure 29:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their non-stress 24h mean ABP.	105
Figure 30:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their stress 24h mean ABP.	106

List of Figures cont...

Fig. No.	Title	Page No.
Figure 31:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their non-stress daytime mean ABP.	106
Figure 32:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their stress daytime mean ABP.	107
Figure 33:	Showing that there was a statistically significant positive correlation between BMI of the studied adolescents and their non-stress nighttime mean ABP.	107
Figure 34:	Showing that there was a statistically significant higher office stress SBP, non-stress 24mean ABP, stress 24h mean ABP, non- stress daytime mean ABP, stress daytime mean ABP among the insufficiently physical active students.	112
