**ESTABLISHMENT OF BOUNDARY MAPS OF
CLIMATE CHANGES UNDER DIFFERENT
CROP PATTERNS BASED ON REMOTE
SENSING TECHNIQUES**

By

MOHAMED ABDOU AHMED YOUSSEF

B.Sc. Agric. Sc. (Agricultural Engineering), Ain Shams University, 2015

A Thesis Submitted in Partial Fulfillment

Of

The Requirements for the Degree of

MASTER OF SCIENCE

in

Agricultural Sciences

(On-Farm Irrigation and Drainage Engineering)

Department of Agricultural Engineering

Faculty of Agriculture

Ain Shams University

2020

Approval Sheet

ESTABLISHMENT OF BOUNDARY MAPS OF CLIMATE CHANGES UNDER DIFFERENT CROP PATTERNS BASED ON REMOTE SENSING TECHNIQUES

By

MOHAMED ABDOU AHMED YOUSSEF

B.Sc. Agric. Sc. (Agricultural Engineering), Ain Shams University, 2015

This thesis for M.Sc. degree has been approved by:

Dr. Chandrashekhar Biradar

Head of Geoinformatics Units, International Center for Agricultural
Research in Dry Areas (ICARDA).

Dr. Ayman Farid Abou-Hadid

Prof. Emeritus of Horticulture, Faculty of Agriculture, Ain Shams
University

Dr. Abdel - Ghany Mohamed El-Gindy

Prof. Emeritus of Agricultural Engineering, Faculty of Agriculture,
Ain Shams University.

Dr. Yasser Ezzat Arafa

Prof. of Agricultural Engineering, Faculty of Agriculture, Ain Shams
University.

Date of Examination / / 2020

ESTABLISHMENT OF BOUNDARY MAPS OF CLIMATE CHANGES UNDER DIFFERENT CROP PATTERNS BASED ON REMOTE SENSING TECHNIQUES

By

MOHAMED ABDOU AHMED YOUSSEF

B.Sc. Agric. Sc. (Agricultural Engineering), Ain Shams University, 2015

Under the supervision of:

Dr. Yasser Ezzat Arafa

Prof. of Agricultural Engineering, Department of Agricultural
Engineering, Faculty of Agriculture, Ain Shams University.
(Principle Supervisor)

Dr. Abdel - Ghany Mohamed El-Gindy

Prof. Emeritus of Agricultural Engineering, Department of
Agricultural Engineering, Faculty of Agriculture, Ain Shams
University.

Dr. Mohammed Ahmed El-Shirbeny

Assoc. Professor of field irrigation and water relations, Agricultural
applications department, National Authority for Remote Sensing and
Space Science (NARSS).

ABSTRACT

Mohamed Abdou Ahmed Youssef: Establishment of Boundary Maps of Climate Changes under Different Crop Patterns Based on Remote Sensing Techniques, M.Sc. Thesis, Department of Agricultural Engineering, Ain Shams University, 2020.

Climate changes and agricultural development processes have a dynamic interaction effect. The irrigation water is limited and scarce in many areas in the world, including Egypt. This study aimed to building up the boundary maps of climate change based on GIS and remote sensing techniques through Spatio-temporal climate change analysis from 1985 up to 2019 to illustrate the dynamic interaction between climate change and agriculture.

The study area is located at 32°10'58.46"E to 32°18'31.784"E longitude and 30°26'32.11"N to 30°31'8.204"N latitude in the Eastern part of Nile Delta, Egypt. The percentage of bare soil and vegetation cover was changed from 86.8% and 12.7 in 1985 and 34.1% and 64.3% in 2019. Based on recorded metrological data, the mean annual air temperature, relative humidity, and solar radiation were 21.7°C, 48.8% and 19.8 (MJ/m²/day) respectively.

The satellite crop coefficient (Kcsat) was estimated using the Normalized Difference Vegetation Index (NDVI) while reference evapotranspiration (ET_o) was calculated using ET_o calculator software. The crop evapotranspiration (ET_c) was estimated under different crop patterns in units of (m³/ha/day) and m³/total cultivated area/day). Soil Adjusted Vegetation Index (SAVI) and Normalized Difference Water Index (NDWI) were estimated every 5 years. The Land surface temperature (LST) has been generated from Landsat satellite images and utilized to build up the monthly minimum, mean and maximum thermal boundary maps.

In the study period (1985-2019), the results illustrated a -0.5°C and -1.2°C decreasing in LST and Air temperature (T_{air}) respectively. The

relation between LST and Tair is well represented as linear correlation and the coefficient of determination (R^2) as high as 0.76. The analysis of crop evapotranspiration (ETc) data declared a high statistically significant increase (1.7 mm) during the period from 1985 to 2019.

The results conclude that the multispectral vegetation indices are a useful tool for quantifying crop evapotranspiration (ETc) at a regional scale. The boundary maps showed the importance of the new reclamation area to increase the cultivated area to mitigate the increase of global warming besides the increase of population.

Keywords: Normalized Difference Vegetation Index (NDVI), Satellite Crop Coefficient (Kcsat), Crop Evapotranspiration (ETc) and land Surface Temperature (LST).

ACKNOWLEDGEMENT

First at all, great thanks and gratitude are to **Allah**, who guide me to this way and assist me in all my life. All words, all feelings and all praise will not be enough to thank **Allah**.

I would like to express my deep appreciation and gratitude to my principal supervisor **Prof. Dr. Yasser Ezzat Arafa**, Prof. of Agric. Eng., Fac. of Agric., Ain Shams Univ. for suggesting the problem of study and for his kind supervision throughout this work. I am grateful for his valuable discussions, suggestions and helpful criticism, which helped me to finalize this work.

Prof. Dr. Abdel - Ghany Mohamed El-Gindy, Prof. Emeritus of Agric. Eng., Fac. Agric., Ain Shams Univ., for kind supervision, continuous encouragement and valuable advices throughout this work. I shall never forget that, he always was a continuous source of encouragement and support in many aspects during my study.

I would like to give a special acknowledgment and appreciation to **Dr. Mohamed Ahmed El-Shirbeny**, Assoc. Professor of field irrigation and water relations, Agricultural applications department, National Authority for Remote Sensing and Space Science (NARSS). for supervision, problem suggestion, continuous encouragement, valuable advices throughout this work, kind help and for reviewing the manuscript.

Special thanks to all staff members of Agricultural Engineering Department, Faculty of Agriculture, Ain Shams University for their valuable help during carried out the experiments of this work.

Great thanks to all members of **my family and friends** for their support during my whole study.

Thanks to all who had lent me a hand to fulfill this research work.
