Faculty of Pharmacy
Microbiology and Immunology

Production and characterization of some antifungal metabolites produced by *Alcaligenes* and *Lysinibacilli* isolates

A Thesis

Submitted in Partial Fulfillment of the Requirements for the

Master's degree

In Pharmaceutical Sciences
(Microbiology and Immunology)

By

Sayed Emad El-Din El-Sayed

Bachelor of Pharmaceutical sciences, 2014
Teaching assistant, Microbiology and Immunology Department
Faculty of Pharmacy, Ahram Canadian University

Under the supervision of

Prof. Dr. Khaled Mohamed Anwar Aboshanab

Acting dean and Vice dean of postgraduate studies and research,
Professor of Microbiology and Immunology
Faculty of pharmacy, Ain Shams University

Ass. Prof. Neveen Ahmed Abd-El Aziz

Associate professor of Microbiology and Immunology
Faculty of pharmacy, Ahram Canadian University

Dr. Ghadir Saied El-Housseiny

Lecturer of Microbiology and Immunology
Faculty of pharmacy, Ain Shams University

Faculty of Pharmacy
Department of Microbiology and Immunology

**Production and characterization of some antifungal
metabolites produced by *Alcaligenes* and *Lysinibacilli*
isolates**

A Thesis

Submitted in Partial Fulfillment of the Requirements for the

Master's degree

In Pharmaceutical Sciences
(Microbiology and Immunology)

2020

ACKNOWLEDGEMENTS

Foremost, I would like to thank and express my sincere gratitude to my distinguished supervisors for their continuous support on my master's study and research. It was a great privilege and honor to work and study under their guidance.

*First, I would like to thank **Prof. Dr. Khaled Mohamed Anwar Aboshanab**, Acting Dean, Vice Dean of Postgraduate Studies and Research and Professor of Microbiology and Immunology, Faculty of Pharmacy, Ain Shams University for the distinguished selection of the research point ,scientific supervision, his sincere support, valuable advice and continuous guidance throughout the work.*

*I am deeply grateful to **Ass. Prof. Neveen Ahmed Abd-El Aziz**, Associate Professor of Microbiology and Immunology Department, Faculty of Pharmacy, Ahram Canadian University for scientific supervision, thorough revision of this thesis, her patience, motivation, enthusiasm, efforts, and immense knowledge. Her follow up and guidance helped me during the research, practical work and writing of this thesis.*

*I am greatly grateful to **Dr. Ghadir Saied El-Housseiny**, Lecturer of Microbiology & Immunology, Faculty of Pharmacy, Ain Shams University for scientific supervision, thorough revision of this thesis , her constant efforts, encouragement, knowledge and follow up throughout the practical work and writing of this thesis. Her dynamism, vision and motivation have deeply helped me all through my research.*

*Special thanks to **Dr. Ahmed Essam Elissawy**, Lecturer of Pharmacognosy, Drug Discovery and Development Research Center at Faculty of Pharmacy, Ain Shams University for his help in the interpretation of the spectroscopic analyses of the antifungal metabolite.*

*Great thanks for **Mina Michael**, former assistant lecturer in Pharmacognosy department, Faculty of Pharmacy, Ahram Canadian University for his help in the extraction and chromatographic separation of the antifungal metabolite.*

Great thanks to Usamma Ammar, Nada Mosallam and Karem Ahmed , former staff in Pharmaceutical Chemistry Department, Faculty of Pharmacy, Ahram Canadian University, for their help in the interpretation of the spectroscopic analyses of the antifungal metabolite.

Last but not least, I would like to thank my family for their endless love, support and care throughout my entire life.

Above all, praise be to God, Lord of the Worlds, who helped me, blessed me, honored me, and led me to where I am.

Sayed Emad El-Din

TABLE OF CONTENTS

TABLE OF CONTENTS.....	i
LIST OF ABBREVIATIONS.....	viii
LIST OF FIGURES	xi
LIST OF TABLES	xv
ABSTRACT	1
INTRODUCTION	3
LITERATURE REVIEW.....	5
1. Fungal infections overview	5
1.1 Classification of Mycoses	5
1.1.1 Classification Based on Site	5
1.1.2 Classification Based on Route of Acquisition	5
1.1.3 Classification Based on Virulence	6
1.1.3.1 Primary (true) fungal pathogens.....	6
1.1.3.2 Opportunistic pathogens	7
1.1.3.2.1 Candidiasis.....	7
1.1.3.2.2 Aspergillosis	10
1.1.3.2.3 Zygomycosis	11
1.1.3.2.4 Cryptococcosis	11
1.1.3.2.5 Phaeohyphomycosis	11
1.1.3.2.6 Hyalohyphomycosis	11
1.2 Fungal growth and reproduction	12
1.3 Incidence and epidemiology	15
2. Antifungal agents	18
2.1 Griseofulvin	18
2.2 Flucytosine	18
2.3 Polyene antifungal agents	19
2.4 Antifungal azoles.....	20

Table of contents

2.5	New triazoles.....	21
2.6	Other sterol synthesis inhibitors: allylamines and morpholines	21
2.7	Echinocandins	22
2.8	Sordarins	23
3.	Challenges facing currently available antifungal agents	24
3.1	Safety profile	24
3.2	Resistance.....	25
4.	Strategies for development of new antifungal agents.....	27
4.1	Screening of large libraries of synthetic small molecules.....	27
4.2	Inspection of bioactive natural products	28
4.2.1	Soil as a source of organisms producing bioactive secondary metabolites	29
4.2.1.1	Actinomycetes.....	30
4.2.1.1.1	<i>Actinomadura</i>	30
4.2.1.1.2	<i>Actinoplanes</i>	30
4.2.1.1.3	<i>Arthrobacter</i>	30
4.2.1.1.4	<i>Micromonospora</i>	31
4.2.1.1.5	<i>Streptomyces</i>	31
4.2.1.2	<i>Nocardia</i>	31
4.2.1.3	<i>Aureobacterium</i>	32
4.2.1.4	<i>Brevibacterium</i>	32
4.2.1.5	<i>Lactobacillus</i>	32
4.2.1.6	<i>Lysinibacillus</i>	32
4.2.1.7	<i>Pseudomonas</i>	34
4.2.1.8	<i>Escherichia</i>	34
4.2.1.9	<i>Alcaligenes</i>	34
4.2.2	Advantages of antifungals of microbial origins	35
4.2.3	2, 4-Di-tert-butylphenol and its analogs as naturally produced antifungal secondary metabolites	35
4.2.4	Physiological functions of secondary metabolites for the producing organisms	37

Table of contents

5. Significance of bacterial antifungal activity	38
5.1 Development of plant protection agents.....	38
5.2 Fungal growth inhibition within the human body	39
5.2.1 The Mouth	39
5.2.2 The Digestive Tract	39
5.2.3 The Lung	40
6. Methods for detection of fungal growth inhibition	40
6.1 Cross-Streak Assay.....	40
6.2 Agar Block Assay.....	40
6.3 Dual Culture Plate Assays	41
6.4 Dual Culture Broth Assay.....	41
6.5 Agar Overlay Assay	41
6.6 Well-Plate Assay	42
6.7 Paper Disc Assay.....	42
6.8 Agar Disc-Broth Method	42
7. Extraction, purification, and characterization of bioactive secondary metabolites.....	42
7.1 Extraction	42
7.2 Purification.....	43
7.3 Characterization and identification of bioactive secondary metabolites.....	44
8. Efforts in product improvement of bioactive secondary metabolites.....	45
8.1 Factors affecting secondary metabolites production by fermentation.....	45
8.1.1 Carbon and nitrogen sources	45
8.1.2 Environmental factors	46

Table of contents

8.2	Optimizing the fermentation process	47
MATERIALS AND METHODS.....		49
1. Bacterial isolates		49
2. Drugs and Chemicals		49
3. Media.....		52
3.1	Readymade media	52
3.2	Minimal medium for antifungal metabolite production (prepared medium).....	52
3.3	Glycerol stock medium.....	53
4. Reagents, buffers and solutions.....		53
4.1	Citrate buffer	53
4.2	Acetate buffer	53
4.3	Potassium phosphate buffer	53
4.4	Cell lysis buffer reagent.....	54
4.5	Primers used for 16S ribosomal RNA amplification by PCR and sequencing	54
5. Collection of soil samples.....		54
6. Recovery and maintenance of isolates		54
7. Screening for antifungal activity		55
7.1	Preliminary screening by agar cross streak and dual culture methods	55
7.2	Secondary screening by agar well diffusion method	55
8. Identification of the selected isolates (S6 and F2)		56
8.1	Gram stain	56
8.2	Biochemical tests.....	56
8.3	DNA sequencing of 16S rRNA.....	56

Table of contents

8.4	Sequence and phylogenetic analyses	56
9.	Bacterial culture for antifungal production in shake flasks	57
9.1	Determination of bacterial count	57
9.2	Seed culture preparation and production conditions.....	58
9.3	Time course of antifungal production in basal medium	59
10.	Testing for the intracellular and extracellular activities of the antifungal metabolite	59
10.1	Testing for the extracellular activity	59
10.2	Testing for the intracellular activity	59
11.	Purification of the antifungal metabolites	60
11.1	Extraction of the antifungal metabolite	60
11.2	Thin layer chromatography (TLC) analysis	60
11.3	Purification of the bioactive metabolite(s) through activity guided fractionation	61
11.4	Correlation between the metabolite(s) concentration and inhibition zone diameter using agar well diffusion.....	61
12.	Characterization of the antifungal metabolite(s)	62
12.1	Effect of heat, pH, detergents and enzymes on stability and activity of the antifungal compound.....	62
12.2	Investigation for fungicidal and / or fungistatic mode of action	62
12.3	Chemical characterization and spectral analysis of the purified antifungal compound(s)	63
12.4	Evaluation of the antifungal activity of the metabolite(s).....	63
13.	Studying the factors affecting antifungal production by <i>Lysinibacillus</i> isolate S6 and <i>Alcaligenes</i> isolate F2.....	64

Table of contents

13.1	Effect of different media components	64
13.2	Optimization of antifungal metabolite(s) production using RSM	64
13.3	Confirmation of the RSM optimization results and estimation of the antifungal concentration.....	65
14.	Statistical analysis	65
	RESULTS.....	68
1.	Recovery of the bacterial isolates and screening for the production of antifungal metabolite(s)	68
2.	Identification of the isolates S6 and F2	71
3.	Time course of antifungal production in basal medium	74
4.	Testing for the intracellular and extracellular activity	75
5.	Extraction of the antifungal metabolite from the seed culture....	75
6.	Purification of the bioactive metabolite(s) by silica gel column chromatography.....	76
7.	Correlation between the metabolite(s) concentration and inhibition zone diameters using agar well diffusion.....	79
8.	Characterization of the antifungal metabolite (s)	80
8.1	Thermal, enzymes, detergents and pH stability of the antifungal metabolite(s)	80
8.2	Investigation for fungicidal and / or fungistatic mode of action	82
8.3	Chemical characteristics and spectral analyses of the purified antifungal compounds	82
9.	Evaluation of the antifungal activity of the <i>Lysinibacillus</i> isolate MK212927 metabolite compared to the commercially available antifungal agents.....	88

Table of contents

10. Factors affecting antifungal metabolite production by <i>Lysinibacillus</i> sp.MK212927 (S6) and <i>Alcaligenes faecalis</i> MT332429 (F2).....	91
10.1 Screening of essential medium components.....	91
10.2 Response surface methodology (RSM) for the optimization of environmental and nutritional conditions affecting the antifungal metabolite production	93
10.3 Confirmatory experiment using optimal conditions and estimation of metabolite concentration.....	101
DISCUSSION.....	104
SUMMARY.....	114
