## **Evaluation of radiation prepared polyelectrolyte membranes for possible use in industrial applications**

A Thesis submitted by

**Hanan Mohamed Abd –Almabood Abd-Almola**

(B.Sc. chemistry) 2008

(M. Sc. chemistry) 2015

**For the requirement of Ph.D.Degree of Science in Chemistry**

**Prof. Dr. Al-Sayed Ahmed solyman**

Prof. Dr. of Organic chemistry,  
Faculty of Science, Ain- shams University

**Prof. Dr. Amr El-Hag Ali said**

Prof. Dr. of Radiation Chemistry,  
National Center for Radiation Research and Technology,  
Egyptian Atomic Energy Authority

**Prof. Dr. Amany Ismail Mahmoud Rafaat**

Prof. Dr. of Radiation Chemistry,  
National Center for Radiation Research and Technology,  
Egyptian Atomic Energy Authority

**To**

**Department of Chemistry**

**Faculty of Science, Ain- ShamsUniversity**

**(2021)**

Ain Shams University  
Faculty of Science  
Chemistry Department

**Evaluation of radiation prepared polyelectrolyte membranes for possible use in industrial applications**

**By**

**Hanan Mohamed Abd –Almabood Abd-Almola**

**A thesis for**

**Ph.D. Degree of Science in Chemistry**

**Thesis Advisors**

**Approved**

***Prof. Dr. Al-Sayed Ahmed solyman***

*Prof. Dr. of Organic chemistry,  
Faculty of Science, Ain- shams University*

***Prof. Dr. Amr El-Hag Ali said***

*Prof. Dr. of Radiation Chemistry,  
National Center for Radiation Research and Technology,  
Egyption Atomic Energy Authority*

***Prof. Dr. Amany Ismail Mahmoud Rafaat***

*Prof. Dr. of Radiation Chemistry,  
National Center for Radiation Research and Technology,  
Egyption Atomic Energy Authority*

***Head of Chemistry Department***

***Prof.Dr.Ayman Ayoub Abdel-Shafi***

## **Acknowledgement**

*First of all, the main thanks to "Allah" to whom I always pray and under the light of his" HOLLY FACE" I live and go.*

*I would like to offer my deep and special thanks to **Prof. Dr. Al-Sayed Ahmed solyman**, Faculty of Science, Ain Shams University, for his interest, honest assistance wise guidance and supervision and deep concern in this work.*

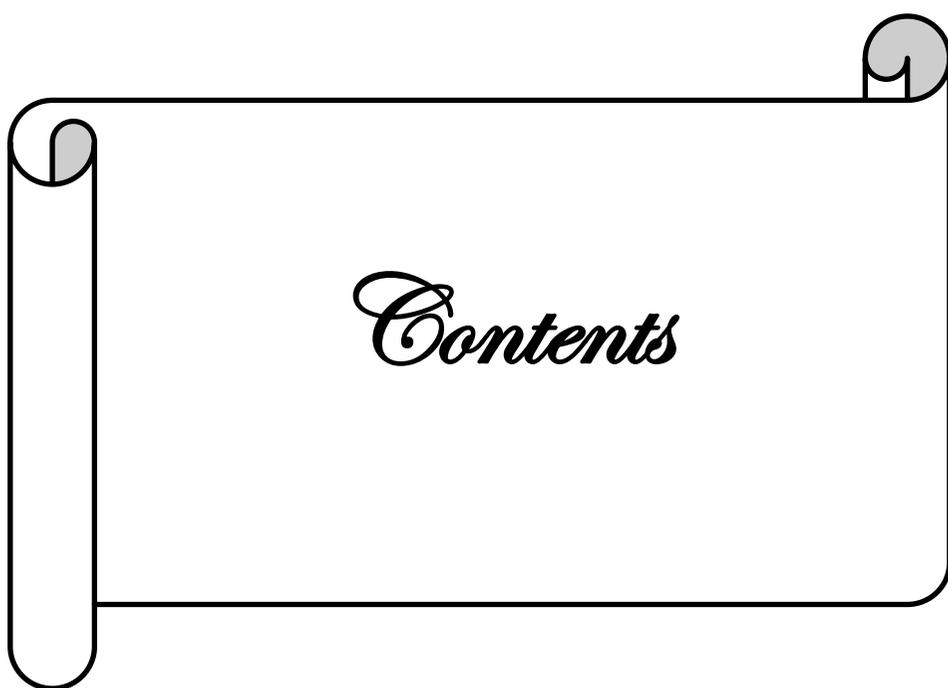

*Thanks God to be one of your students as you are a guide for both knowledge and ethics. Really my language isn't able to support me with words or expressions to estimate your real rank. Usually it is difficult expressing thanks and gratefulness to those who affected our life because we fell nothing will be enough. Today I'm faced with the same difficulty expressing thanks and respect to **Prof. Dr. Amr El-Hag Ali Sayed**, but I will try my best. "A Teacher was about to be a prophet" all of us knows this phrase but really I fill it only when I get the honor of being under your supervision , all what I can say Allah bless you , reward all your great efforts day after day to make this thesis.*

*On this occasion, really I just want to say some words expressing my thanks to my great **Dr. Amany Ismail Rafaat** the one who is always found in service of all people clear heart, kind fillings, great ability to deal with all surrounding people especially with me, whatever I asked, whatever I needed, always her kind smile was only enough she was always ready to do anything even if hard farther. My great doctor all my felling, respect, and thanks for your being beside me and encouraging me always to be the best, Allah bless you.*

*First and foremost I offer my sincerest gratitude to my colleague, **Eng. Ahmed Maged** who has supported me though out my thesis with his patience and knowledge. I attribute the level of my doctor's degree to his encouragement and effort and without him this thesis, too, would not have been completed. One simply could not wish for a better or friendlier supporting.*

*I extend my sincere thanks and appreciation to **all employees of sewage water campany in Arab Abu- said –Helwan** for all the help I received during the period of my thesis work.*

*Many thanks are due to all colleagues and staff members of Polymer Chemistry Department, National Center for Radiation Research and Technology (NCRRT) and Radioisotopes Production Facility (RPF), Egyptian Second Research Reactor Complex (ETRR-2 Complex) for their help and facilities provided throughout this work.*

Contents .....	
List of figures .....	
List of tables.....	
List of Abbreviations .....	
Aim of Work.....	15
Abstract .....	18
CHAPTER I: INTRODUCTION .....	1
1.1. Research background (problems).....	1
1.2. Types of fuel cells .....	4
1.2.1. Phosphoric acid fuel cells (PAFC) .....	4
1.2.2. Molten carbonate fuel cells (MCFC) .....	4
1.2.3. Solid oxide fuel cells (SOFC).....	5
1.2.4. Alkaline fuel cells (AFC) .....	5
1.2.5. Polyelectrolyte membrane fuel cell.....	5
1.2.5.1. Proton-exchange membrane fuel cells (PEMFCs) .....	5
1.2.5.2. Solid alkaline fuel cells (SAFC).....	6
1.3. Polyelectrolyte membranes .....	10
1.3.1. Development of polyelectrolyte membrane .....	10
1.3.2. Radiation-induced graft polymerization technique .....	11
1.4. Application of polyelectrolyte membrane in full cells.....	14
1.4.1. Microbial full cell (MFCs): Components and mechanism .....	14
1.4.2. Direct alcohol fuel cell (DAFCs) .....	15
1.4.2.1. Direct glycerol fuel cell (DGFC): component and mechanism ....	16
1.4.2.1.1. Anion-exchange membrane.....	16
1.4.2.1.2. Anodic catalyst for glycerol oxidation .....	17

1.4.2.1.3. Air cathode catalyst for glycerol reduction .....	19
1.4.3. Microbial desalination fuel cell (MDFCs): Components and mechanism .....	20
CHAPTER II: LITERATURE REVIEW .....	22
2.1. Grafting radiation technique used for preparation of polymer electrolyte membranes .....	22
2.1. 1. Polyelectrolyte cation exchange membrane .....	26
2.1.1.1. Microbial fuel cell (MFCs) .....	30
2.1.2. Polyelectrolyte anion exchange membrane .....	38
Preparation of conductive polymer (catalyst) .....	45
1. Anodic catalyst .....	45
2. Cathodic catalyst .....	54
2.1.2.1. Direct glycerol fuel cell (DGFCs) .....	56
2.1. 3. Microbial desalination fuel cells .....	65
CHAPTER III: EXPERIMENTAL .....	76
3.1. Materials .....	76
3.2. Source and substrate .....	76
3.3. Gamma radiation source .....	76
3.4. Methods .....	76
3.4.1. Graft copolymerization .....	76
3.4.2. Chemical modifications of the grafted sheets .....	77
3.4.2.1. Sulfonation of LDPE-g-P (GMA-co-VAc) grafted membrane .....	77
3.4.2.2. Quaternization of the LDPE-g-P (DMAEMA) grafted membrane .....	77
3.4.3. Characterization of the chemical modified grafted sheets .....	78
3.4.3.1. Sulfonation density .....	78
3.4.3.2. Chemical stability .....	78
3.4.3.3. Water Sorption behavior .....	78
3.4.3.4. Ion exchange capacity (IEC) measurements .....	79

3.4.3.5. Conductivity & electrochemical impedance spectroscopy measurements of the prepared membranes.....	79
3.4.4. Synthesis of Graphene Oxide (GO).....	80
3.4.5. Synthesis of (CuO/rGO) composite powders with micro-layered structure.....	80
3.4.6. Synthesis of (NiCoS/rGO) nanocomposite.....	81
3.4.7. Development of nanocomposite based conductive inks for possible use as electrodes .....	81
3.4.8. Electrochemical characterization of the developed electrodes.....	82
3.4.8.1. Cyclic voltammetry .....	82
3.4.8.2. Electrochemical Impedance Spectroscopy (EIS) .....	82
3.4.8.3. Linear Sweep Voltammetry analysis (LSV).....	82
3.4.9. Construction, operation and performance evaluation of different fuel cells .....	83
3.4.9.1. Microbial Fuel cell.....	83
3.4.9.2. Direct glycerol fuel cell.....	85
3.4.9.3. Microbial deasealation fuel cell .....	86
3.5. Physical characterization of membranes and catalysts.....	88
3.5.1. Fourier Transform Infrared spectroscopy (FTIR) .....	88
3.5.2. The X-Ray diffraction (XRD).....	88
3.5.3. Thermogravimetric analysis (TGA).....	88
3.5.4. Transmission electron microscopy (TEM) measurements .....	88
3.5.5. Scanning electron microscopy (SEM) measurements .....	89
3.5.6. Mechanical properties .....	89
CHAPTER IV: RESULTS AND DISCUSSION .....	90
Part (I): Microbial fuel cell .....	90
4.1. Radiation-induced graft copolymerization of glycidyl methacrylate-co-vinyl acetate onto low density polyethylene to prepared cation exchange membrane for microbial fuel cell application .....	90

4.1.1. Membrane preparation .....	91
4.1.1.1. Effect of solvent.....	91
4.1.1.2. Effect of comonomer concentration .....	93
4.1.1.3. Effect of comonomer composition at different irradiation dose .	93
4.1.2. Membrane physical characterization .....	94
4.1.2.1. FT-IR .....	94
4.1.2.2. Sulfonation of the LDPE-g-P (GMA-co-VAc) .....	95
4.1.2.3. Morphological characterization .....	97
4.1.3. Membrane properties.....	99
4.1.3.1. Water sorption Capacity .....	99
4.1.3.2. Ion exchange Capacity.....	100
4.1.3.3. Thermal characterization .....	101
4.1.3.4. Proton conductivity.....	102
4.1.3.5. Mechanical properties .....	104
4.1.4. Microbial Fuel Cell performance .....	105
4.1.4.1. Bioelectricity production as a function of grafting degree .....	105
4.1.4.2. Polarization and power density profiles .....	106
4.1.4.3. Effect of electron acceptor concentration.....	107
4.1.5. Bio-electrochemical characterization .....	109
4.1.5.1. Cyclic voltammetry .....	109
4.1.5.2. Electrochemical impedance spectroscopy.....	110
4.1.6. Wastewater treatment and columbic efficiency .....	111
Part II: Direct glycerol fuel cell .....	113
4.2. Part II (A): Radiation induced graft polymerization of dimethylamino ethylmethacrylate onto low density poly ethylene to prepared anion exchange membrans for direct glycerol fuel cell application.....	113
4.2.1. Membrane preparation .....	114
4.2.1.1. Effect of solvent .....	114

4.2.1.2. Effect of monomer concentration .....	116
4.2.1.3. Effect of different irradiation doses .....	117
4.2.2. Membrane physical characterization .....	118
4.2.2.1. FTIR .....	118
4.2.2.2. Quaternization of the LDPE-g-DMAEMA films.....	119
4.2.2.3. Morphological characterization .....	119
4.2.3. Membrane properties.....	121
4.2.3.1. Water sorption capacity .....	121
4.2.3.2. Ion exchange capacity .....	122
4.2.3.3. The thermal behavior .....	123
4.2.3.4. Anionic conductivity.....	124
4.2.3.5. Chemical stability .....	126
4.2. Part II (b): Synthesis and characterization of nano reduced graphene oxide decorated CuO as a conductive ink for anodic catalytic oxidation of glycerol .....	127
4.2.4. Physical characterization .....	127
4.2.4.1. Structural characterization of the CuO/rGO nanocomposite ...	127
4.2.4.2. X-ray diffraction .....	128
4.2.4.3. TEM .....	130
4.2.4.4. Thermal Properties of the CuO/rGO nanocomposite.....	130
4.2.5. Electrochemical characteristics of the prepared CuO / rGO nanocomposite based ink.....	131
4.2.5.1. Cyclic voltammetry .....	131
4.2.5.2. Electrochemical impedance spectroscopy.....	133
4.2.5.3. Linear sweep voltammetry.....	134
4.2.5.4. Cyclic voltammetry at different scan rate.....	136
4.2.6. Electrocatalytic activity of the prepared conductive ink for glycerol oxidation using different fuel composition in half cell test .....	138

4.2.7. Stability .....	141
4.2. Part II (c): Synthesis and characterization of nano reduced graphene oxide decorated NiCoS as a conductive ink for cathode oxygen reduction reaction .....	142
4.2.8. Physical characterization.....	142
4.2.8.1. Structural characterization of the NiCoS/rGO nanocomposite	142
4.2.8.2. X-ray diffraction .....	143
4.2.8.3. TEM .....	144
4.2.8.4. Thermal Properties of the NiCoS/rGO nanocomposite .....	144
4.2.9. Electrochemical characteristics of the prepared NiCoS / rGO nanocomposite based ink .....	145
4.2.9. 1. Cyclic Voltammetry .....	145
4.2.9.2. Electrochemical impedance spectroscopy .....	147
4.2.9.3. Linear Sweep Voltammetry analysis .....	148
4.2. Part II (D): Direct glycerol fuel cell construction .....	149
4.2.10. Effect of temperature on open circuit voltage (OCV), polarization and power density in direct glycerol fuel cell (DGFC) using membrane of different grafting degree .....	149
4.2.11. HPLC.....	151
4.2.12. Part II (E): Electrochemical characterization of nano reduced graphene oxide decorated NiCoS as a conductive ink for anodic catalytic oxidation of glycerol.....	152
4.2.12.1. Electrochemical characteristics of the prepared NiCoS/rGO nanocomposite based ink .....	152
4.2.12.1.1. Cyclic voltammetry (CV) .....	152
4.2.12.1. 2. Electrochemical impedance spectroscopy .....	153
4.2.12.1. 3. Linear Sweep Voltammetry analysis .....	155
4.2.12.2. Cyclic voltammetry at different scan rate .....	156
