Impact of interdisciplinary Translational Research in developing innovative therapeutic strategies in Clinical Pharmacy Science

A Thesis for Fulfillment of PhD Degree in Pharmaceutical Sciences
(Clinical Pharmacy)

Submitted to Faculty of Pharmacy, Ain Shams University

By

Mohamed Ahmed Aboouf Ali

M.Sc. in Pharmaceutical Sciences (Clinical Pharmacy)

Assistant Lecturer, Clinical Pharmacy Department

Faculty of Pharmacy, Ain Shams University, Cairo, Egypt

Under supervision of:

Prof. Dr. Nagwa Ali Sabri, PhD

Professor and head of Clinical Pharmacy Department

Faculty of Pharmacy, Ain Shams University, Cairo, Egypt

Prof. Dr. Ayman Al-Hendy, MD, PhD

Professor and Director of Clinical and Translational Research

Department of Obstetrics and Gynecology

University of Illinois at Chicago

Chicago, Illinois, United states of America

Dr. Sara Mahmoud Zaki, PhD

Assistant Professor of Clinical Pharmacy Department

Faculty of Pharmacy, Ain Shams University

Cairo, Egypt

Faculty of Pharmacy, Ain Shams University

2020

Acknowledgements

I am deeply thankful to "Allah", to whom I relate any success in my life.

*I would like to express my deepest appreciation to **Prof. Dr. Nagwa Ali Sabri, Professor and head of Clinical Pharmacy Department – Faculty of Pharmacy - Ain Shams University**, for her wonderful care and sincere help, precious time, valuable guidance and continuous support in completing this work.*

*I am very grateful to **Prof. Dr. Ayman Al-Hendy, Professor of Obstetrics and Gynecology, University of Illinois at Chicago**, for his precious mentorship, guidance, hosting me in his laboratory, and endless valuable help to gain lots of technical experience. I am indebted to him for everything in this work and many things in my life. Thanks for everything I have learned from you.*

*I am greatly thankful to **Dr. Sara M. Zaki, assistant professor of Clinical Pharmacy Department – Faculty of Pharmacy - Ain Shams University** for her close supervision, valuable efforts and continuous encouragement during the progress of this work.*

*I would like to thank **Dr. Qiwei Yang, Professor of Obstetrics and Gynecology, University of Illinois at Chicago** for his continuous assistance, valuable comments, and enthusiastic support that helped me a lot to keep the active pace while conducting this work.*

*I would like to thank **all members** of my research team at University of Illinois at Chicago and Augusta University for their support and help, as well as in Clinical Pharmacy Department, Faculty of Pharmacy - Ain Shams University*

*Many special thanks and deep gratitude for **my father, mother, Siblings and others** for their kind and sincere help, love and support during the progress of this work. They exert every effort and sacrifice to offer me encouragement and support that is really appreciated. Their care helped me stay focused and overcome all the barriers.*

Mohamed Ahmed Abo Ouf Ali

الملخص العربي	

List of Tables

No.	Title	Page
(1)	Studies of ethnic disparity in uterine fibroids incidence/prevalence	7
(2)	List of antibodies with used dilutions	41
(3)	Human forward and reverse primers sequences for qRT-PCR	46
(4)	Fold changes of DNA damage-related gene expression in response to VDR knockdown and Vitamin D3 treatment	88
(5)	Fold changes of DNA damage-related gene expression in response to Vitamin D3 and Paricalcitol treatment in UF stem cells	103

List of Figures

No.	Title	Page
(1)	FIGO classification of Uterine Fibroids (UFs).	3
(2)	Role of Progesterone in Uterine Fibroids pathogenesis.	13
(3)	Overview of WNT/β-catenin signaling.	15
(4)	Model for translational research, as proposed by the Evaluation Committee of the Association for Clinical Research Training.	30
(5)	Patient consent form for participation in research	35
(6)	Expression of WNT signaling pathway related genes in Human Uterine Fibroid and Myometrium tissues	54
(7)	Expression of β-Catenin and its responsive genes in Human Uterine Fibroid and Myometrium tissues	57
(8)	Activation of β-Catenin signaling in Human uterine fibroids is associated with higher nuclear β-Catenin protein expression	59
(9)	The effect of different β-catenin inhibitors and activator treatments on the proliferation of UF cells	62
(10)	Effect of β-catenin inhibitor ICG-001 or activator Wnt3a on β-catenin nuclear translocation and β-catenin responsive gene expression	63
(11)	Effect of β-catenin genetic knockdown on its downstream signaling in UF cells.	65
(12)	Estrogen and β-catenin cross talk in human myometrium and uterine fibroid cells.	68
(13)	Expression of Class I HDAC enzymes in Human Uterine Fibroid and myometrium tissues and the effect of HDAC inhibitors on the proliferation of HuLM cells.	71
(14)	HDAC inhibitors show anti-proliferative effect on uterine fibroid cells via inhibition of β-catenin signaling pathway.	73
(15)	Effect of HDACis on cell cycle and apoptosis related markers in UF cells.	76

(16)	Proposed model displaying activated β-Catenin signaling, its crosstalk with estrogen and Histone deacetylase in Uterine Fibroid pathogenesis	78
(17)	More DNA damage, an impaired DNA repair capacity, accumulated and less VDR expression in human uterine fibroids compared with the adjacent myometrium from African American patients	81
(18)	UF cells (HuLM) showed decreased expression of DNA repair-related genes compared with normal uterine smooth muscle cells (UTSM)	83
(19)	Vitamin D receptor (VDR) knockdown induced DNA damage and impaired DNA damage response in UTSMs.	85
(20)	VDR knockdown decreased DNA repair-related gene expression in UTSMs.	87
(21)	Vitamin D3 induced VDR expression and a decreased DNA damage load in HuLM cells.	94
(22)	Vitamin D3 induced DNA repair capacity in HuLM cells.	96
(23)	Vitamin D3 increased DNA repair-related gene expression in HuLM cells.	98
(24)	The effect of Vitamin D3 and Vitamin D analogs treatments on the proliferation of UF stem cells.	101
(25)	The effect of Vitamin D3 and Vitamin D analog (paricalcitol) treatments on the gene expression of DNA damage signaling pathway related genes in UF stem cells.	102
(26)	The effect of Vitamin D3 and Vitamin D analog (paricalcitol) treatments on the gene expression of DNA repair related genes in UF stem cells.	107
(27)	The effect of Vitamin D3 and Vitamin D analog (paricalcitol) treatments on the protein expression of DNA repair related markers in UF stem cells.	108
(28)	Model of the functional relationship between the vitamin D/VDR axis and DNA damage response.	109
