Faculty of Women for Arts,
Science and Education
Botany Department

Radiation Modification of Nanoparticles to Study Their Anti-biofilm Activity of Some Pathogenic Bacteria Along with Antimicrobial Agent.

Thesis submitted by

Rawia Farag Sadeck

M.Sc. in Immunology, 2014

Submitted to partial fulfillment of requirement for
The Degree of

Doctor of Philosophy in Science
“Microbiology”

Botany department

**Faculty of Women for Arts, Science
and Education- Ain Shams University**

2020

Faculty of Women for Arts,
Science and Education
Botany Department

Approval Sheet

Title: Radiation Modification of Nanoparticles to Study Their
Anti-biofilm Activity of Some Pathogenic Bacteria Along with
Antimicrobial Agent.

Name: Rawia Farag Sadeck

SUPPERVISION COMMITTEE

Dr. Zeinab Mohamed Hassan Kheiralla -----

Professor of Microbiology, Botany department-
Faculty of Women for Arts, Science
and Education- Ain Shams University

Dr. Hala Abd Allah Farrag -----

Professor of Medical Microbiology-Drug Radiation
Research-Atomic Energy Authority, Egypt.

Dr. Hassan Ahmed Abdelrehim -----

Professor of Polymer Chemistry - Polymer
Radiation Research-Atomic Energy Authority,
Egypt.

Dr. Shaimaa Mohamed Abd El-salaam -----

Lecture of Microbiology, Botany department-
Faculty of Women for Arts, Science
and Education- Ain Shams University

Faculty of Women for Arts,
Science and Education
Botany Department

Title: Radiation Modification of Nanoparticles to Study Their Anti-biofilm Activity of Some Pathogenic Bacteria Along with Antimicrobial Agent.

Name: Rawia Farag Sadeck

This thesis for Doctor of Philosophy in Microbiology degree has been approved by:

1	Dr. Zeinab Mohamed Hassan Kheiralla Professor of Microbiology, Botany department- Faculty of Women for Arts, Science and Education-Ain Shams University
2	Dr. Hala Abd Allah Farrag Professor of Medical Microbiology-Drug Radiation Research-Atomic Energy Authority, Egypt.
3	Dr. Seham Yousef Mohamed Eltablawy Professor of Microbiology-Drug Radiation Research-Atomic Energy Authority, Egypt.
4	Dr. Ahmed Abdelwahab M. Abdelhafez Professor of Microbiology, Microbiology department- Faculty of Agriculture - Ain Shams University

Declaration

No portion of the work referred to in the thesis has not been submitted for any degree at this or any other university.

Rawia Farag Sadeck

2020

Acknowledgements

First and last thanks to Allah who gives me the power to go forward in a way illuminated with his merciful guidance.

*With a grateful heart and immense pleasure, to my **Prof. Dr. Zeinab Mohamed Hassan Kheiralla**, Professor of Microbiology, Botany department-Faculty of Women for Arts, Science and Education-University of Ain Shams. I humbly submit to the glory of the Almighty for her keen supervision, help, blessing me with the necessary will and perseverance to undertake and complete my research work successfully. Actually, she was my Mom.*

*I gratefully acknowledge to my **Prof. Dr. Hala Abdullah Fraag**, Professor of Medical Microbiology-Drug Radiation Research-Atomic Energy Authority, Egypt. for her guidance and motivation to my work, I greatly respect her and appreciate her constructive criticism, constant encouragement and concern in bringing out my hidden talents by urging me to do my best. Actually, she was more than supervisor she owned my heart.*

*I dedicate my sincere thanks to my **Prof. Dr. Hassan Ahmed Abdelrihim** for giving me the opportunity to work under his guidance and providing facilities to carry out my research work.*

*I thank **Dr. Shaimaa Abdelsalam** Lecturer of Microbiology, Botany department- Faculty of Women for Arts, Science and Education-University of Ain Shams for her content support and valuable suggestion during my research period. I thank **Associate Professor. Dr. Eman araby and Dr. Shaimaa Abd Elkader** for their content support and valuable suggestion during my research period. I take this opportunity to thank my colleagues and friends from laboratory for their help at various stages of my research. I sincerely thank them for giving the opportunity to work in such a valuable group.*

Rawia F. Sadek

Dedication

To the persons who taught me patience, strife and pushed me towards success in life and gave me all care and duty to my tender Father and Mother. All thanks to my brothers and sisters for their support and encouragement.

Table of Contents

Subject	page
Contents	
List of Figures	i
List of Tables	v
List of Abbreviations	vi
Aim of the work	viii
Abstract	ix
1. Introduction	1
2. Review of Literature	5
2.1 Biofilm	5
2.1.1 Definition of biofilm	5
2.1.2 History of biofilm	6
2.1.3 Composition of biofilms	7
2.1.4 Formation of biofilm	7
2.2 Hazard of biofilm formation	8
2.2.1 Biofilms on biomaterials	8
2.2.2 Drinking water distribution systems	9
2.2.3 Industrial problems associated with biofilms and their control	10
2.2.4 Heat exchangers and cooling water systems	12
2.3 Microbiologically influenced corrosion	14
2.4 Common process for biofilms control	16
2.4.1 Chemical antimicrobial agents	16
2.4.2 Mechanical control	17

2.4.3 Physical control	18
2.5 Economic cost of biofilms	18
2.6 Nanotechnology	19
2.6.1 Synthesis metal nanoparticles	21
2.6.1.1 Metal oxide nanoparticles	22
2.6.2 Study of the gamma radiation effect on Nanoparticles size	27
2.7 Polymer/metal composites	28
2.7.1 Mechanisms of antimicrobial polymer/metal nanocomposites	33
2.8 Cost effectiveness	38
3 Materials and Methods	41
3.1 Sampling	41
3.1.1 Drinking water samples	41
3.1.2 Swimming pool samples	41
3.1.3 Secondary coolant system tower samples	42
3.1.3.1 Coupons samples	42
3.1.3.2 Water circulation samples	42
3.2 Media used	42
3.3 Synthesis of nanoparticles	45
3.3.1 Materials used for synthesis nanoparticles	45
3.4 Methods	45
3.4.1 Determination of free chlorine in water samples	45
3.4.2 Microbiological investigations	46
3.4.2.1 Isolation and purification of the tested bacterial isolates	46
3.4.2.2 Screening of biofilm producer isolates	47

3.4.2.2.1 Qualitative methods (modified Congo red agar method)	47
3.4.2.2.2 Quantitative analysis detection of biofilm formation by tissue culture plate method (TCP)	47
3.4.2.3 Biochemical identification of the most biofilm producer isolates	48
3.4.2.4 Antibiotic sensitivity test	49
3.4.2.5 Bio-corrosion studies for biofilm producer isolates	50
3.4.2.5.1 Coupons preparation	50
3.4.2.5.2 Weight loss measurment	51
3.4.3 Nanoparticles synthesis	52
3.4.3.1 Green synthesis of zinc oxide and copper oxide nanoparticles	52
3.4.3.2 Radiation modification of the synthesized nanoparticles	53
3.4.3.3 Ex-situ synthesis of copper /zinc oxide nano composite polymer	53
3.4.4 Nanoparticles characterization	53
3.4.4.1 UV-VIS spectrophotometric analysis	53
3.4.4.2 Dynamic light scattering (DLS)	54
3.4.4.3 Fourier transform infrared spectroscopy (FT-IR)	54
3.4.4.4 Transmission electron microscope	55
3.4.4.5 X-Ray diffraction analysis (XRD)	55
3.4.4.6 Atomic force microscopy (AFM)	56
3.4.5 Anti-bacterial efficacy of synthesized nanoparticles	56
3.4.5.1 Minimal inhibitory concentration (MIC) determination of nanoparticles	57
3.4.5.2 Anti-biofilm activity of the tested nanoparticles	58
3.4.5.4 Cell-surface hydrophobicity assay	59

3.4.6 Bacterial identification using 16S rRNA gene sequence analysis	60
3.4.7 Scanning electron microscope (SEM) of C1010 carbon mild steel coupon for biofilm formation in presence of nanocomposite polymer	61
3.4.8 DNA fragmentation assay	62
3.4.9 Simulation of cooling system	63
3.4.10 Electrochemical measurements impedance	64
3.4.10.1 Electrochemical corrosion measurements	64
3.4.10.2 Procedures used for corrosion inhibition measurement tests	65
3.4.10.2.1 Inhibitor stock solutions	65
3.4.10.2.2 Electrochemical cell	65
3.4.10.3. Electrochemical impedance spectroscopy measurements	68
3.5 Statistical analysis	71
4 Results and Discussion	72
4.1 Detection of free chlorine	72
4.2 Water samples collection, isolation and tentative identification of bacterial isolates	73
4.3 Detection of biofilm formation	74
4.3.1 Qualitative methods congo red agar method (CRA)	74
4.3.2 Quantitative method tissue culture plate (TCP)	76
4.3.3 Identification of the most potent biofilm producing isolates	81
4.3.4 Antibiotic susceptibility test for the most potent biofilm producing isolates	83
4.3.5 Bio-corrosion ability of the highest biofilm producer isolates	86
a) Weight loss and Bio-corrosion rate	86
b) Scanning electron microscope	88

4.4 Green synthesized zinc oxide and copper oxide nanoparticles and radiation modification by gamma radiation doses	94
4.4.1 Characterization of copper oxide nanoparticles	94
4.4.2 Characterization of zinc oxide nanoparticles	103
4.4.3 Characterization <i>ex-situ</i> nanocomposite polymer	115
4.5 Antibacterial activity of the prepared CuO, ZnO nanoparticles and nanocomposite	120
4.6 Minimum inhibitory noncentrations (MICs)of the prepared ZnO, CuO NPs and nanocomposite	123
4.7 Anti-biofilm activity of zinc oxide, copper oxide nanoparticles and nanocomposite	125
4.8 Antibiofilm activity of chlorine along with the synthesized nanoparticles	132
4.9 Bacterial adherence to hydrocarbons, anti-adherence activity of nanoparticles	138
4.10 Identification of the selected bacterial isolates by 16S rRNA gene sequencing	140
4.11 Effect of different prepared nanoparticles on DNA degradation for the most biofilm producer strains	142
4.13 Scanning electron microscope (SEM) of biofilm formation in presence and absence of nanocomposite	148
4.14 Energy dispersion spectrum (EDS)	152
4.15 Electrochemical corrosion inhibition measurements	153
4.15.1 Polarization measurements	153
4.15.2 Electrochemical impedance spectroscopy (EIS)	158
4.15.3 Adsorption isotherm	163
4.16 Simulation system for corrosion treatment	165
5 Conclusion	169
6 Summary	171
7 References	175
