**Effect of Use of Laser Acupuncture for Treatment
of Drooling and Hypertonia in Children
with Cerebral Palsy**

A Thesis

Submitted for partial fulfillment of Master Degree
in Pediatrics

By

Nashwa Khairy Ebada

M.B.B.Ch, 2008

Faculty of Medicine, Cairo University

Under Supervision of

**Prof. Dr. Sahar Mohamed Ahmed
Hassanein**

Professor of Pediatrics

Faculty of Medicine,
Ain Shams University

**Prof.Dr. Eitedal Mahmoud
Daoud**

Professor of Pediatrics

National Research Center

Ass.Prof.Dr. Dalia Mohamed Ezz El Din Elmikawy

Assistant Professor of Physical Medicine and Rehabilitation

Faculty of Medicine, Ain Shams University

**Faculty of Medicine
Ain Shams University
2021**

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قالوا

لسببائك لا علم لنا
إلا ما علمتنا إنك أنت
العليم العظيم

صدق الله العظيم

سورة البقرة الآية: ٣٢

Acknowledgments

*First and foremost, I feel always indebted to **Allah**, the **Most Beneficent** and **Merciful**, who gave me the strength to accomplish this work,*

*My deepest gratitude to my supervisor, **Prof. Dr. Sahar Mohamed Ahmed Hassanein**, Professor of Pediatrics, Faculty of Medicine, Ain Shams University, for her valuable guidance and expert supervision, in addition to her great deal of support and encouragement. I really have the honor to complete this work under her supervision.*

*I would like to express my great and deep appreciation and thanks to **Prof.Dr. Eitedal Mahmoud Daoud**, Professor of Pediatrics, National Research Center, for her meticulous supervision, and her patience in reviewing and correcting this work,*

*I must express my deepest thanks to **Ass.Prof.Dr. Dalia Mohamed Ezz El Din Elmikawy**, Assistant Professor of Physical Medicine and Rehabilitation, Faculty of Medicine, Ain Shams University, for guiding me throughout this work and for granting me much of her time. I greatly appreciate her efforts.*

*I would like also to thank **Dr. Ahmed Gamal El-Wehedy**, for his help and cooperation during the whole work.*

*Special thanks to my **Parents**, my **Husband** and all my **Family** members for their continuous encouragement, enduring me and standing by me.*

*✍ **Mashwa Khairy Ebada***

Arabic Summary	—

List of Abbreviations

<i>Abbr.</i>	<i>Full-term</i>
ASD	: Autism spectrum disorder
BBB	: Blood-brain-barrier
BTX-A and B	: Botulinum toxin A and B
CP	: Cerebral palsy
CT	: Computed tomography
DQ	: Drooling quotient
DTI	: diffusion tensor imaging
GMFCS	: Gross Motor Function Classification System
ICF	: International Classification of Functioning, Disability, and Health
ITB	: Intrathecal Baclofen
LILT	: Low intensity laser therapy
LLLT	: low-level laser therapy
MRI	: Magnetic resonance imaging
OR	: Oral
PBM	: Photobiomodulation
PCAs	: Personal care assistants
PVL	: Periventricular leukomalacia
RF-DRG	: Radiofrequency lesion of the dorsal root ganglion (RF-DRG)

List of Abbreviations

SDR	: Selective dorsal rhizotomy
SL	: Sublingual
SNAP-25	: Sensitive factor attachment protein-25
TD	: Trans-dermal
TENS	: Transcutaneous electrical nerve stimulation
UMN	: Upper motor neuron

Introduction

Cerebral palsy (CP) clinically defined as neurodevelopmental disorder that results from a disruption in the development in the infantile or fetal brain. Cerebral palsy is usually associated by sensation, cognition, communication, perception, and/or behavioral disorders, and/or by a seizure disorder”. It affects over 17 million people worldwide and is the most common physical disability in childhood (*Cerebral Palsy Alliance Research Foundation, 2018*).

In Egypt it has an estimated prevalence of 2.04 per 1000 live births. Prognosis of cerebral palsy patients usually relies on the type and severity of the pathological neurological insult and if there are associated medical comorbidities (*Mathewson and Lieber, 2015*).

Spastic cerebral palsy is by far the most common type of overall cerebral palsy, occurring in about 70% of all cases. Spasticity is the result of upper motor neuron lesion in the brain as well as the corticospinal tract or the motor cortex. It is also considered to be a critical factor preventing movements in these patients. In addition to motor impairment, children with cerebral palsy may also experience learning difficulties, have difficulty feeding and have seizure conditions. Moreover, many children may experience sensory impairments and have difficulties communicating (*Mathewson and Lieber, 2015*).

Drooling, or sialorrhoea, is a common difficulty faced by children with neurological impairment including cerebral palsy. It may lead to a reduction in their quality of life, causing skin irritation, dehydration and high levels of embarrassment and social isolation for both the patient and family (*Collins et al., 2020*).

Conventional therapy for cerebral palsy has been concentrated to increase the function and minimize complications. Acupuncture is a medical procedure, an effective nonpharmacological therapy and provides promising results for some pediatric problems (*Smith and Kurian, 2016*).

Laser acupuncture is one of the acupuncture techniques with minimal side effects and safe for children. Stimulation of acupuncture points using low intensity laser light can induce photobiostimulation reaction on cells and tissues. Laser acupuncture does not cause mechanical effect resembling the manual acupuncture; however, it has similar mechanism in stimulating the signal transduction pathway (*Putri et al., 2020*).
