Abstract

Aim of the present study was to determine the effect of counseling intervention for mothers caring children with mental disability to help them in accidents prevention. **Research design:** A quasi experimental design was utilized for conducting the study. **Settings:** The study was conducted in the two Special Needs Care Centers at Cairo governorate namely Ard El Hobe Center and Sara Center. **Subjects:** A purposive sample includes 48 mothers coupled with their children those selected from the previously mentioned setting those had eligible criteria. **Tools of data collection:** An interview questionnaire sheet was used pre / post counseling. **Results:** This study revealed that, there was a highly statistical significant difference between rate of accidents` occurrence pre / post counseling. **Conclusion:** This study concluded that, the rate of accidents among mentally disabled children was significantly decreased after counseling intervention. **Recommendations:** Further studies should be done to assess the effect of counseling and training programs on children`s parents to reduce the rates and severity of accidents among mentally disabled children.

Key words: Counseling, children, accidents` prevention, special needs.
