Acknowledgement

First of all, I would like to thank **ALLAH** for helping me to accomplish this work.

I wish to express my heartfelt thanks, respect, and profound gratitude to **Prof. Dr. Wafaa El-Sayed Ouda** Professor of Pediatric Nursing/ Faculty of Nursing/ Ain Shams University for effort, illuminating meticulous supervision, criticism, sincere guidance, constant support, encouragement and patience to produce this work in its present form.

I would like to express my deepest gratitude and appreciation to **Prof. Dr. Randa Mohamed Adly** Professor of Pediatric Nursing/ Faculty of Nursing/ Ain Shams University for her valuable knowledge and encouragement, support, cooperation and for efforts and time given to the fulfillment of this study.

Special thanks go to the **mothers** and their **children** who participated in this study. I would like also to thank the **hospital staff of the study setting** for their help, time and cooperation throughout the study period.

*The candidate
Amira Sobhy*

List of Tables

In Review of Literature:

No	Title	Page No
1.	Core concepts of family-centered care.	49
2.	Nine elements of framework for family-centered care.	50
3.	When to call the physician or nurse practitioner.	74

In Results:

No	Title	Page No
1.	Number and percentage distribution of the studied children according to their characteristics	91
2.	Number and percentage distribution of the studied children according to their school enrollment condition	93
3.	Number and percentage distribution of the studied children according to their manifestations of CHD	97
4.	Number and percentage distribution of the studied children according to their previous hospital admission and duration of current hospital stay	98
5.	Number and percentage distribution of the studied mothers according to their characteristics	100
6.	Mean scores and standard deviation of the studied mothers regarding to their needs (before and after FCC intervention)	102
7.	Mean score and standard deviation of the studied mothers' knowledge about the core concept of family-centered care	103

List of Tables (Cont.,)

No	Title	Page No
8.	Number and percentage distribution of the studied mothers according to their knowledge about congenital heart diseases (before and after FCC intervention)	104
9.	Number and percentage distribution of the studied mothers according to their knowledge about pre-post operative care (before and after FCC intervention)	105
10.	Number and percentage distribution of the studied mothers according to their information about preoperative preparation for heart surgery	107
11.	Mean score and standard deviation of the studied mothers according to their level of participation (reported practices) before and after FCC intervention	109
12.	Number and percentage distribution of the studied mothers according to their actual practice (before and after FCC intervention)	111
13.	Number and percentage distribution of the studied mothers according to their level of anxiety and depression (before and after FCC intervention)	113
14.	Mean scores of the studied mothers according to their coping patterns (before and after FCC intervention)	114
15.	Correlations between mothers' characteristics and their level of participation and actual practices regarding care of their children undergoing heart surgery after FCC intervention	115
16.	Correlations between mothers' characteristics and their level of anxiety, depression and coping patterns regarding care of their children undergoing heart surgery after FCC intervention	116

List of Tables (Cont.,)

No	Title	Page No
17.	Correlations between total mothers' knowledge and their level of participation and total level of actual practices regarding care of their children undergoing heart surgery before and after FCC intervention	117
18.	Correlations between mothers' needs and their total knowledge, level of participation and actual practices regarding care of their children undergoing heart surgery before and after FCC intervention	118
19.	Correlations between mothers' coping patterns and their level of anxiety and depression regarding care of their children undergoing heart surgery before and after FCC intervention	119
20.	Correlations between level mothers' anxiety, depression and coping patterns and their needs, total knowledge, level of participation and level of actual practices before and after FCC intervention	120

List of Figures

In Review of Literature:

No	Title	Page No
1.	The normal heart, ventricular septal defect & atrial septal defect.	13
2.	Patent ductus arteriosus.	15
3.	Anatomical classification of pulmonary stenosis.	18
4.	A balloon on a catheter is inflated to open the stenotic aortic valve.	21
5.	Coarctation of the aorta.	22
6.	Tetralogy of fallot.	25
7.	Transposition of the great arteries.	29
8.	Pulse oximetry screening protocol.	34

In Results:

No	Title	Page No
1.	Percentage distribution of the studied children according to their type of family	92
2.	Percentage distribution of the studied children according to their history of CHD	94
3.	Percentage distribution of the studied children according to their onset of the diagnosis	95
4.	Percentage distribution of the studied children according to their diagnoses	96
5.	Percentage distribution of the studied children according to their prescribed medication	99

List of Figures (Cont.,)

No	Title	Page No
6.	Mothers' source of information about congenital heart diseases	101
7.	Percentage distribution of the studied mothers according to their total level of knowledge about CHD, pre-post operative care and follow up care (before and after FCC intervention)	108
8.	Percentage distribution of the studied mothers according to their total level of participation (reported practices) before and after FCC intervention	110
9.	Percentage distribution of the studied mothers according to their total level of actual practices (before and after FCC intervention)	112

List of Abbreviations

AS	Aortic Stenosis
ADL	Activities of Daily Living
ASD	Atrial Septal Defect
AV	Atrioventricular
AVSDs	Atrioventricular Septal Defect
BPAs	Branch Pulmonary Arteries
CDC	Centers for Disease Control and Prevention
CHD	Congenital Heart Disease
CHF	Congestive Heart Failure
CMR	Cardiovascular Magnetic Resonance
CNVs	Copy Number Variations
COA	Coarctation of the Aorta
CPB	Cardiopulmonary Bypass
CT	Computed Tomography
CUSPH	Cairo University Specialized Pediatric Hospital
ECG	Electrocardiogram
ECHO	Echocardiography
FCC	Family-Centered Care
HLHS	Hypoplastic Left Heart Syndrome
IPFCC	Institute for Patient- and Family-Centered Care
L→R	Left-to-Right
LPA	Left Pulmonary Artery
LVOT	Left Ventricular Outflow Track Obstruction
MRI	Magnetic Resonance Imaging
NICU	Neonatal Intensive Care Unit
O ₂	Oxygen
PDA	Patent Ductus Arteriosus

List of Abbreviations (Cont.)

PFCC	Patient and Family-Centered Care
PFO	Patent Foramen Ovale
PGE	Prostaglandin
PICU	Paediatric Intensive Care Units
pp	Paternal Participation
PS	Pulmonary Stenosis
PV	Pulmonary Valve
R→L	Right-to-Left
RNA	Ribonucleic Acid
RVH	Right Ventricular Hypertrophy
RVOT	Right Ventricle Outflow Tract
SVC	Superior Vena Cava
TAPVR	Total Anomalous Pulmonary Venous Return
TGA	Transposition of Great arteries
TOF	Tetralogy of Fallot
VATS	Video-Assisted Thoracoscopic Surgery
VCFS	Velocardiofacial Syndrome
VSD	Ventricular Septal Defect

List of Appendices

No	Title	Page No
I.	Protocol	
II.	Administrative approval letter	
	Tools for data collection	
III.	Child' assessment sheet	1
IV.	The needs of parents questionnaire (NPQ)	4
V.	The family–centered care scale (FCCS)	6
VI.	Structured interview questionnaire sheet	8
VII.	The index of mothers' participation (IMP)	18
VIII.	Observational checklists	20
IX.	Anxiety-depression scale	27
X.	Coping process scale	29
XI.	Model key answers questionnaire sheet	32
XII.	Family-centered care sessions	41
