**Engineer's Name:** Mai Mahmoud Abd El-Aziz Mohamed  
**Date of Birth:** 08/02/1993  
**Nationality:** Egyptian  
**E-mail:** maimahmoud721993@gmail.com  
**Phone** 01095927447  
**Address:** Ismailia, Egypt  
**Registration Date:** 01/10/2016  
**Awarding Date:** / /2021  
**Degree:** Master of Science  
**Department:** Electrical Power and Machines Engineering

**Supervisors:**

Prof. Khaled Ali El Metwally  
Assoc. Prof. Abdelmomen Usama Mahgoub

**Examiners:**

Prof. Khaled Ali El Metwally	(Thesis main advisor)
Assoc. Prof. Abdelmomen Usama Mahgoub	(advisor)
Prof. Dr. Abdul Latif Muhammad Al Shafe	(Internal examiner)
Prof. Dr. Ahmed Abdul Sattar Abdel Fattah	(External examiner)
(Faculty of Engineering, Ain-Shams University)	

**Title of Thesis:**

**DESIGN AND DEVELOPMENT OF ENERGY HARVESTING DEVICES FOR INTELLIGENT SYSTEMS**

**Key Words:**

Energy harvesters; piezoelectric; vibrations; power management system; power electronics circuits.

**Summary:**

The wireless sensor nets (WSNs) have an effective and efficient for Condition monitoring. Batteries are vital sources in many WSNs applications. But it poses a lot of problems. Energy harvesting can be an attractive solution. Piezoelectric energy harvesters (PEHs) used in this thesis which have different advantages. The integrated circuit (ICs), which supply the sensors, have been limited for low output power applications under 1 Watt. So, a proposed converter has attracted this issue of convert microwatt or milliwatt level power from the environment. It presented as a single-stage ac to dc converter, which is based on power factor correction (PFC) topology. Where the harvested energy is 300  $\mu$ W, it has seen that a total power loss of the proposed system is 102.05  $\mu$ W. So, the proposed topology proves to be superior over other techniques and suitable for low micro watt power applications.

# **Disclaimer**

I herewith declare that this thesis is my original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

# Acknowledgments

Firstly, I would like to thank God for everything. Without his help and blessing, I would not have been able to finish this work. Then, I wish to express my sincere gratitude to my supervisor Prof. Khaled El-Metwally, and Assoc. Prof. Abdelmomen Mahgoub for encouraging me and introduced guidance and unlimited support to me during my work. Their patience and kindness are greatly appreciated.

I would also like to thank my husband Ahmed for making our home the best place for my study. His care and understanding go way beyond the norm when I needed them the most, and I am forever grateful. If not for him, I would never have been able to finish this thesis. Also, special thanks to my son Hamza for motivating me to finish my thesis. This thesis belongs to them as much as it does to me. Also, my parents, Mahmoud and Lobna, provided much guidance and moral support during my educational career and allowed me to reach where I am today. Their prayers gave me strength and helped me overcome all the challenges at school and in life.
