Cairo University
Faculty of Veterinary Medicine
Department of Food Hygiene and Control

Quality of Some Locally Produced Meat Products

Thesis presented by

Mai Mahmoud Zohdy Fadel

B.V.Sc. Cairo University, 2011

M.V.Sc. Cairo University, 2015

For the Degree of Ph.D.

Hygiene and Control of Meat and its Products

Under supervision of

Dr. Taha M. Nouman

*Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University*

Dr. Mohamed T. Emara

*Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University*

Dr. Mai A. Mohamed

*Assistant professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University*

Dr. Hoda A. Aiedia

*Chief Researcher
Food Hygiene Department
Animal Health Research Institute
Dokki, Giza*

2021

Cairo University
Faculty of Veterinary Medicine
Department of Food Hygiene and Control

APPROVAL SHEET

Title of the thesis: Quality of Some Locally Produced Meat Products

Name of Candidate: *Mai Mahmoud Zohdy Fadel*

APPROVAL COMMITTEE

Prof. Dr. Hemmat Mostafa Ibrahim

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Banha University

Hemmat M.

Prof. Dr. Hayam Abd EL-Aal Mansour

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

Hayam Mansour

Prof. Dr. Taha M. Nouman

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

T. Nouman

Prof. Dr. Mohamed M.T. Emara

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

M. T. Emara

Dr. Mai A. Mohamed

Assistant Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

Mai

Dr. Hoda Amin Mohamed Aiedia

Chief Researcher
Food Hygiene Department
Animal Health Research Institute, Dokki, Giza

Hoda Amin

Date of approval: 26/8/2021

Cairo University
Faculty of Veterinary Medicine
Department of Food Hygiene and Control

Supervision Sheet

Dr. Taha Mahmoud Nouman

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

Dr. Mohamed Talaat Emara

Professor of Meat Hygiene
Faculty of Veterinary Medicine
Cairo University

Dr. Mai A. Mohamed

Assistant Professor of Meat Hygiene Faculty
of Veterinary Medicine
Cairo University

Dr. Hoda Amin Mohamed Aiedia

Chief Researcher- Food Hygiene Department
Animal Health Research Institute
Dokki, Giza

2021

Name: Mai Mahmoud Zohdy Fadel

Date of birth: 10/3/1990, Cairo, Egypt

Degree: Ph.D.

Nationality: Egyptian

Specialization: Hygiene and Control of Meat and its Products

Title of the thesis: Quality of some locally produced meat products

Supervision:

Dr. Taha M. Nouman: Professor of Meat Hygiene, Faculty of Veterinary Medicine, Cairo University

Dr. Mohamed M.T. Emara Professor of Meat Hygiene, Faculty of Veterinary Medicine, Cairo University

Dr. Mai A. Mohamed Assistant professor of Meat Hygiene, Faculty of Veterinary Medicine, Cairo University

Dr. Hoda A. Aiedia Chief Researcher, Food Hygiene Department- Animal Health Research Institute, Dokki, Giza

Abstract

Keywords: Preservation, casein, edible coat, meat products

In the first phase of the study, a market survey was carried out on two economic classes of beef luncheon and beef burger to detect the actual problems associated with them. Results revealed that certain bacteriological and chemical criteria set internationally and by the Egyptian organization of standardization were trespassed several times not only in low-cost products as it may be presumed but also in high-cost products. This was declared by the fact that premium luncheon sausages and both premium and economic burger patties had unacceptable mean values of APC, anaerobic bacterial count, and MSG content. Also, the moisture content of all grades of luncheon and premium burger marginally exceeded moisture limits while protein content did not reach the acceptable level in any of the grades of both products. Additionally, the fatty acids profile of both product's grades diverged from normal beef profile suggesting incorporation of low-grade protein sources instead of beef meat which was affirmed by the findings of the histological examination that showed the presence of organs, bone, and cartilage among other tissues. Phase two of the study was experimenting the effect of addition of 600 ppm ascorbic acid + 1000 ppm sorbic acid to casein coat to be applied on experimentally manufactured beef kofta and compared to control samples and plain casein coat. Results revealed that casein coat carrying sorbic and ascorbic acids enhanced preservation capacity of casein coat and improved keeping quality of kofta as emphasized by the results of APC, *Bacillus cereus*, and fecal coliforms counts, in addition to TBARs value which was better in the casein-acids coat. Values of cooking characteristics except for diameter reduction values were significantly higher in casein coat carrying acids followed by plain casein coat and finally control kofta. Moreover, color scores were significantly better in casein and acids coat, and there were either improved sensory or non-significant differences among sensory evaluation scores of either coat samples compared to control adding an extra advantage to casein-based coats since they did not affect the character of flavor, aroma, or appearance of kofta.

Dedication

To my beloved father's soul.

To my mother's soul.

To my dearest sister, and brother.

To my top supporter and partner, Ahmed.

To my adorable son, Omar.

ACKNOWLEDGMENT

All praises and gratefulness for Allah who gave me the power to finish this work.

*I sincerely thank my chief supervisor **Prof. Dr. Taha M. Nouman**, Professor of Meat hygiene and control, Faculty of Veterinary Medicine, Cairo University, for his guidance, continuous support, and invaluable information.*

*I wish to extend my deep gratitude to **Prof. Dr. Mohamed M.T. Emara**, Professor of Meat Hygiene and Control, Department of Food Hygiene and Control, Faculty of Veterinary Medicine, Cairo University for his provident advice, broad knowledge and indispensable efforts to finish this thesis.*

*I would like to express my profound appreciation and thanks to **Dr. Mai A. Mohamed**, Assistant professor of Meat Hygiene and control, Faculty of Veterinary Medicine, Cairo University for her genuine dedication, discipline, her hard and precise work and from whom I learned a lot.*

*This work could not have been completed without **Dr. Hoda A.M. Aiedia** chief researcher, Food hygiene Department, Animal Health Research Institute who I am indebted for her ceaseless support and assistance since I started my post graduate academic studies, and for her kindness and encouragement that helped me reach this point.*

*Also, I would like to thank both **Dr. Khaled El-Khras**, and **Dr. Bassema A. Hendy** Chief researchers, Food hygiene Department, Animal Health Research Institute who spared no effort to help and guide me.*

LIST OF TABLES

<i>No.</i>	<i>Table</i>	<i>Page</i>
3.1.1	Moisture, protein, and fatty acid contents (%) of premium and economic luncheon sausages	22
3.1.2	Moisture, protein, and fatty acid contents (%) of premium and economic beef burger patties	23
3.1.3	TBARS, TVBN values, residual nitrite, and monosodium glutamate (MSG) contents of premium and economic beef luncheon sausages and burger patties	26
3.1.4	Bacteriological counts (\log_{10} cfu/g) of premium and economic beef luncheon sausages and burger patties	26
3.2.1	Sensory attributes of kofta during storage at -18 °C for 3 months	47
3.2.2	Bacteriological profile (\log_{10} cfu/g) of control and coated kofta during storage at -18 °C for 3 months	48
3.2.3	Physicochemical analysis of kofta during storage at -18 °C for 3 months	51
3.2.4	Cooking characteristics of kofta during storage at -18°C for 3 months	51
3.2.5	Instrumental color values of kofta during storage at -18°C for 3 months	52

INTRODUCTION

INTRODUCTION

Meat is an important food item that is crucial to a healthy diet. High-quality meat is a major requisition for the meat industry (**Joo *et al.*, 2013**). Besides being a source of major nutritional fractions such as protein and fat, meat and meat products are irreplaceable sources of some micronutrients such as iron, selenium, vitamins A, B12, and folic acid that are not provided by plant-based diets, and if present they will not be of the same bioavailability (**Biesalski, 2005**). Obtaining wholesome meat products is indeed the intent of all consumers, therefore they are focusing more and more on quality and safety setting higher challenges for the food manufacturers. Despite being an appealing upgrade to this essential food, meat products come with a whole other set of safety issues; on top of them additives allowance; that should grantee safety and uttermost avail of these products. However, whether the consumer obtains the quality expected from meat products available in markets or not is a crucial query as it entails many safety and quality elements. Those elements if ensured to be correctly done along with the processing of meat products, the final product would be presented to the consumer in a healthy and satisfactory condition from all aspects to reach consumer satisfaction which directly affects the marketability of meat products (**Font-i-Furnols and Guerrero, 2014**).

The production of hygienic meat products is a challenge that industrial sectors have to fulfill. Another matter that the meat products industry has to face is the wide range of available raw materials that affect the quality and acceptance of the final product (**Damez and Clerjo, 2013**). This is indeed a major issue that challenges the meat processors since the usage of inferior quality raw materials make it inevitable to resort to higher, wrongful amounts of additives like nitrites and monosodium glutamate “MSG” to overcome high microbial loads, off taste and flavor putting consumers at higher risk of many diseases. Methaemoglobinaemia and cancer of different organs were reported due to overconsumption of products containing nitrites (**Aschebrook-Kilfoy *et al.*, 2011**). Numerous studies reported that MSG had toxic (**Shi *et al.*, 2013**) and genotoxic effects on humans if consumed at high doses (**Khatab and Elhaddad, 2015**). Thus, the concentrations of all additives used in meat products are
