"Improvement of the biophysical properties of bone tissue sterilized by gamma radiation using different antioxidants"

Submitted to the Faculty of Science-Ain Shams University-In Partial fulfillment for the Degree of Doctor of Philosophy (PhD) in Biophysics

by

Naglaa Mohamed Samir El-Hansi

Assistant Lecturer, Radiation Physics Department, National Center for Radiation Research and Technology (NCRRT), Atomic Energy Authority, Cairo, Egypt

Under Supervision Of

Prof. Dr. Abdelsattar M. Sallam,

Prof. of Biophysics, Physics Department, Faculty of Science,
Ain Shams University.

Prof. Dr. Mona Salah El-Din Hassan Talaat,

Prof. of Biophysics, Physics Department, Faculty of Science,
Ain Shams University.

Prof. Dr. Omar Sayed Desouky,

Prof. of Radiation Biophysics, Radiation Physics Department,
National Center for Radiation Research (NCRRT), Egyptian Atomic Energy Authority.

Prof. Dr. Mahmoud A. Khalaf,

Prof. of Microbiology, Radiation Microbiology Department,
National Center for Radiation Research (NCRRT), Egyptian Atomic Energy Authority.

Dr. Hoda Hassan Said,

Assis. Prof. of Radiation Biophysics, Radiation Physics Department,
National Center for Radiation Research (NCRRT), Egyptian Atomic Energy Authority

Physics Department
Faculty of Science
Ain Shams University
2021

Faculty of Science
Ain Shams University

APPROVAL SHEET

Title of the Ph.D. thesis

"Improvement of the biophysical properties of bone tissue sterilized by gamma radiation using different antioxidants"

Name of the candidate

Naglaa Mohamed Samir El-Hansi

Supervision committee:

(Signature)

Prof. Dr. Abdelsattar M. Sallam,

Prof. of Biophysics, Physics Department.
Faculty of Science, Ain Shams University.

Prof. Dr. Mona Salah El-Din Hassan Talaat,

Prof. of Biophysics, Physics Department.
Faculty of Science, Ain Shams University.

Prof. Dr. Omar Sayed Desouky,

Prof. of Radiation Biophysics,
Radiation Physics Department,
(NCRRT), Egyptian Atomic Energy Authority.

Prof. Dr. Mahmoud A. Khalaf,

Prof. of Microbiology, Radiation Microbiology Department,
(NCRRT), Egyptian Atomic Energy Authority

Dr. Hoda Hassan Said,

Assis. Prof. of Radiation Biophysics, Radiation Physics
Department, National Center for Radiation Research
(NCRRT), Egyptian Atomic Energy Authority

**Head of Physics Department,
Faculty of Science, Ain Shams University
Prof. Dr. Nabil Ali Ameen Elframawy**

Ph.D. thesis

Name of the candidate: Naglaa Mohamed Samir El-Hansi

Title: "Improvement of the biophysical properties of bone tissue sterilized by gamma radiation using different antioxidants"

Degree: Doctor Philosophy in Biophysics

Supervisors:

Prof. Dr. Abdelsattar M. Sallam- Prof. of Biophysics, Physics Department. Faculty of Science, Ain Shams University.

Prof. Dr. Mona Salah El-Din Hassan Talaat- Prof. of Biophysics, Physics Department, Faculty of Science, Ain Shams University.

Prof. Dr. Omar Sayed Desouky- Prof. of Radiation Biophysics, Head of Radiation Physics Department, (NCRRT), Egyptian Atomic Energy Authority.

Prof. Dr. Mahmoud A. Khalaf- Prof. of Microbiology, Radiation Microbiology Department, National Center for Radiation Research (NCRRT), Egyptian Atomic Energy Authority.

Dr. Hoda Hassan Said - Assis. Prof. of Radiation Biophysics, Radiation Physics Department, National Center for Radiation Research (NCRRT), Egyptian Atomic Energy Authority

Examinars:

Name: Naglaa Mohamed Samir El-Hansi

Degree: Ph. D.

Department: Physics – Biophysics Group

Faculty: Science

University: Ain-Shams

Graduation Date: 2007- Ain-Shams University

Registration Date: 2014

Date of Award: 2021

Acknowledgement

First and foremost, all thanks to Allah the Beneficent, the Merciful, for my success in completing this work. I would like to express my unlimited thanks to my parents for their patience and encouragement.

My sincere thanks and gratitude to my dear husband for his support and assistance in every step to complete this thesis in the best way possible.

I wish to express my utmost gratitude and deepest appreciation to Prof. Abdelsattar M. Sallam, Professor of Biophysics, Physics department, Faculty of Science, Ain Shams University for continuous supervision, sincere guidance and continuous engorgement. I owe him more than I can express for all the time, he spent in revising every detail.

No words can express how I am grateful for Prof. Dr. Mona Salah El-Din, Professor of Biophysics, Physics department, Faculty of Science, Ain Shams University for her great efforts with me. Actually, she was so helpful and patient with me and she is worth of lots of thanks and gratitude. I consider myself fortunate to work under her supervision.

Special thanks are due to Prof. Dr. Omar Sayed Desouky- Prof. of Radiation Biophysics, Radiation Physics Department, , Egyptian Atomic Energy Authority for his valuable help. Without his generous and valuable assistance, this work would lose its value. It is an honor working under his supervision.

I wish to express my thanks to Prof. Dr. Mahmoud A. Khalaf Prof. of Microbiology, Radiation Microbiology Department,

National Center for Radiation Research, Egyptian Atomic Energy Authority for his precious guidance and generous and valuable assistance.

*Words can never express my everlasting gratitude and thanks to **Dr. Hoda Hassan Saïd** - Assis. Prof. of Radiation Biophysics, Radiation Physics Department, National Center for Radiation Research, Egyptian Atomic Energy Authority, who spared no time or efforts at any time in providing me with her experience and continuous guidance while supervision every step in this work. I cannot evaluate her efforts in this thesis. I would like to express my thanks for her for everything.*

*Finally I would like to express my sincere thanks and deepest gratitude to thank my sisters (**Wassmaa, Híaa, Habíba, Híla**) and my brothers (**Díaa and Bahaa**). Special thanks to my brother **Bahaa El-Hansi** for his great assistance in all steps of this thesis, and for his help to complete this thesis in the best way possible.*

Thanks to all of my colleagues at the Atomic Energy Authority's National Center for Radiation Research and Technology (NCRRT) for their support, professional assistance, and encouragement.

My sincere appreciation also goes out to the Head of the Physics Department at Ain Shams University, as well as all of the department's staff members, for their unwavering encouragement and assistance.

List of Figures	VI
List of Tables	XI
List of Abbreviations	XIII
Abstract	XV
Chapter one - Introduction and Literature Review	1
1.1 Introduction	1
1.2 Literature Review	3
1.2.1 Effect of gamma radiation sterilization on mechanical properties of bone graft	3
1.2.2 Free radical scavengers (antioxidants) and the biomechanical properties of gamma sterilized bone	4
1.2.3 Effect of Hyudroxytyrosol (HT) on bone	6
1.2.4 Effect of Alpha Lipoic Acid (ALA) on bone	7
1.2.5 FTIR assessment of the biochemical composition of bone	9
1.2.6 XRD assessment of crystal structure of bone hydroxyapatite	11
1.2.7 Validation of radiation sterilization	13
Chapter two - Theoretical Aspects	15
2.1 The hierarchical structure of bone	15
2.1.1 The molecular components of bone	16
2.1.1.1 The collagen matrix and cross-links	16
2.1.1.2 Mineral phase	17
2.1.1.3 Water	13
2.1.2 Relationships between water, organic matrix and mineral	20
2.2 Basic knowledge of bone grafting	21
2.2.1 Biological mechanism of bone grafting Hung, 2012	21
2.2.1.1 Osteoconduction	21
2.2.1.2 Osteoinduction	21
2.2.1.3 Osteogenesis	21
2.2.2 Types and tissue sources of grafts	21
2.2.3 Tissue banks and tissue processing	23
2.2.3.1 Procurement	23
2.2.3.2 Preservation and storage methods	24
2.2.3.3 Sterilization	24
2.3 Biomechanical assessment of bone strength	25

2.3.1 Factors affecting the mechanical properties of bone	27
2.3.2 Plasticity and toughness of bone	27
2.3.3 Microhardness and indentation testing of bone	27
2.3.4 Factors affecting microhardness of bone	29
2.3.5 The role of bone matrix composition in the mechanical properties	29
2.4 Radiation sterilization of tissue allografts	30
2.4.1 Radiation sterilization sources	30
2.4.2 Radiation sterilization dose	31
2.4.3 Effects of gamma rays on living organisms	31
2.4.4 Decimal reduction dose (D10) and radiation resistance of micro-organisms	32
2.4.5 Factors influencing response to radiation	33
2.4.6 Validation of the radiation sterilization process and Method VD max	33
2.5 Antioxidants	35
2.5.1 Hydroxytyrosol (HT)	35
2.5.1.1 The chemical structure	35
2.5.1.2 Biological activity of Hydroxytyrosol	35
2.5.2 Alpha Lipoc Acid (ALA)	36
2.5.2.1 The chemical structure	37
2.5.2.2 Antioxidant activity	37
2.6 Fourier transform infrared spectroscopy-Attenuated total reflection (FTIR -ATR)	37
2.6.1 Attenuated total reflectance (ATR)	38
2.6.2 Parameters that are commonly assessed for enamel, dentin and bone and their importance	42
2.6.2.1 Mineral to matrix ratio	42
2.6.2.2 Carbonate to phosphate ratio	42
2.6.2.3 Mineral maturity/Crystallinity	43
2.6.2.4 Collagen cross-links (Collagen maturity)	45
2.7 X-ray diffraction	46
Chapter three- Materials and methods	49
3.1 Preparation of specimens	49
3.2 Pilot experiment and Antioxidants treatment	50
3.3 Gamma irradiation	51
3.4 Mechanical Tests	52
3.4.1 Three-point bending test	52
3.4.2 Microhardness test	53
3.5 ATR-FTIR analysis	55

3.6 X-ray Diffraction (XRD) analysis	55
3.7 Validation of radiation sterilization	57
3.7.1 Bioburden estimation from untreated bone samples	57
3.7.2 Bioburden estimation of antioxidant treated bone samples	58
3.7.3 Procedure for Method VD maxSD	58
3.7.4 Isolation of bacteria	60
3.7.5 Identification of bacterial isolates	61
3.7.5.1 Staining of the isolated bacteria (Gram stain)	61
3.7.5.2 Biochemical testing	61
3.7.6 Radiation D10 determination	62
3.7.7 Standardization of bacterial cell suspension	63
Chapter four- Results and Discussion	64
4.1 Three-point bending and Microhardness tests	64
4.2 Fourier Transform Infrared Spectroscopy-Attenuated Total Reflection (FTIR-ATR)	68
4.3 X-ray Diffraction Analysis (XRD)	78
4.4 Validation of radiation sterilization	81
4.4.1 Processing of Bone Allograft	81
4.4.2 Microbial Contaminants of Untreated Processed Bone	82
4.4.3 Characterization of microorganisms isolated from Untreated Processed Bone	83
4.4.4 Microbial Contaminants of Antioxidant treated Processed Bone	84
4.4.5 Determination of recovery efficiency	85
4.4.6 Average bioburden and verification dose of antioxidant treated processed bone	86
4.4.7 Validation of Radiation Sterilization	88
4.4.8 Characterization and Identification of microbial contaminated antioxidant treated processed bone	90
4.4.9 Radiation resistance of bacterial isolates	91
Conclusion	96
