MODAL ANALYSIS OF TWO DIMENSIONAL OPEN PERIODIC STRUCTURES

By

Mostafa Ibrahim Mohammed Abdullah Al-Kholi

A Thesis Submitted to the
Faculty of Engineering at Cairo University
in Partial Fulfillment of the
Requirements for the Degree of
MASTER OF SCIENCE
in
Electronics and Electrical Communications Engineering

FACULTY OF ENGINEERING, CAIRO UNIVERSITY
GIZA, EGYPT
2021

MODAL ANALYSIS OF TWO DIMENSIONAL OPEN PERIODIC STRUCTURES

By

Mostafa Ibrahim Mohammed Abdullah Al-Kholi

A Thesis Submitted to the
Faculty of Engineering at Cairo University
in Partial Fulfillment of the
Requirements for the Degree of
MASTER OF SCIENCE
in
Electronics and Electrical Communications Engineering

Under the Supervision of

Prof. Tamer M. Abuelfadl

Professor of Electromagnetic Waves
Electronics and Electrical Communications Engineering
Faculty of Engineering, Cairo University

2021

Engineer's Name: Mostafa Ibrahim Mohammed Abdullah Al-Kholi
Date of Birth: 06/12/1987
Nationality: Egyptian
E-mail: m.e.khouli@gmail.com
Phone: 01113142523
Address: 5 street 13, Mouazzafeen city, Helwan, Cairo, Egypt

Registration Date: 01/03/2015
Awarding Date: …/…./2021
Degree: Master of Science
Department: Electronics and Electrical Communications Engineering

Supervisor:
Prof. Tamer M. Abuelfadl

Examiners:
Prof. Tamer M. Abuelfadl (Thesis main advisor)
Prof. Islam A. Eshrah (Internal examiner)
Prof. Ahmed M. Attiya (External examiner)
Professor in Electronics Research Institute

Title of Thesis:

MODAL ANALYSIS OF TWO DIMENSIONAL OPEN PERIODIC STRUCTURES

Key Words:
Open periodic structures, Modal analysis, Improper modes, Scan blindness, Method of moment

Summary:
Applying modal analysis using the Method of moment and Floquet theorem in spectral domain to a two dimensional open periodic structure, describing the nature of every possible mode: bounded or unbounded, proper or improper and determining precisely when a mode changes its nature from proper to improper or vice versa.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Abstract xviii

1 Introduction 1

2 Literature review 3

2.1 Historical background 3
2.2 Guiding structures classification 4
2.3 Guided waves classification 5
2.3.1 Homogeneous plane waves 5
2.3.2 Inhomogeneous plane waves 6
2.3.3 TM guided waves classification 8
2.3.4 TE guided waves classification 10
2.4 Modal analysis of grounded dielectric slab 12
2.4.1 Dyadic Green's function of the grounded dielectric slab . . 13
2.4.2 Field over the grounded dielectric slab 13
2.4.3 Branch point and branch cut 14
2.4.4 Integration in the k_x plane 18
2.4.5 Integration in the k_z plane 20
2.4.6 Integration in the θ_k plane 21
2.4.7 Spectral properties variation with frequency 23
2.4.8 Spectral properties variation with angle of propagation . . 30
2.5 Modal analysis of one dimensional open periodic structures 30
2.5.1 Fields over one dimensional open periodic structures . . . 30
2.5.2 Floquet representation 31

2.5.3 Method of moment solution 32
2.5.4 Expansion of equivalent surface current over one dimensional periodic structure 34
2.5.5 Spectral properties variation with frequency 38
2.5.6 Spectral properties variation with angle of propagation . . 40

3 Modal analysis of two dimensional open periodic structures 50
3.1 Non-periodic structure 50
3.1.1 Integral equations 50
3.1.2 Method of moment 52
3.1.3 Spectral domain approach 56
3.2 Two dimensional Open periodic structure 59
3.2.1 Floquet representation 59
3.2.2 Method of moment solution 61
3.3 Expansion of equivalent surface current over two dimensional open periodic structure 67
3.3.1 Basis functions 68
3.3.2 Selection of basis functions 72
3.4 Spectral properties variation with frequency 73
3.4.1 Dispersion relation of two dimensional open periodic structure 74
3.4.2 Spectral properties of spatial harmonics 76
3.5 Spectral properties variation with angle of propagation 83
3.5.1 Spatial harmonics representation in $\beta_x - \beta_y$ plane 84
3.5.2 Branch point and branch cut 88

4 Results 93
4.1 Variation of modal properties with frequency 94
4.1.1 Comparing results with a commercial numerical solver . . 94
4.1.2 The mode TM_0 95
4.1.3 The mode TE_1 104
4.1.4 The mode TM_1 106
4.2 Variation of modal properties with angle of propagation 108
4.2.1 At $f = 10GHz$ 109
4.2.2 At $f = 13GHz$ 113
4.2.3 At $f = 18GHz$ 113
4.2.4 At $f = 21.9GHz$ 117
4.2.5 At $f = 22.687GHz$ 121
4.3 Direct application of the results: scan blindness angles 125

5 Conclusion 133

List of Tables

2.1 Some of TM and TE modes cut off frequencies, obtained from the direct expressions (2.62) and (2.63) 24

A.1 Brief of previous analysis concerned with steepest paths directions 149

List of Figures

2.1 Classification of guiding structures 4
2.2 Classification of guided modes over slow guiding structures according to their transverse α attenuation constants over the structure surface. 5
2.3 A slow wave guiding structure, consists of a ground plane mounted by a dielectric slab 7
2.4 Grounded dielectric slab. (a) Physical structure and (b) equivalent circuit of grounded dielectric slab. The resonance condition according to the transverse resonance technique is that $\overleftarrow{z} + \overrightarrow{z} = 0$. 8
2.5 Classification of complex guided TM waves. (a), (b) and (c) represents a proper complex waves, where (d),(e) and (f) represents improper complex waves 10
2.6 Classification of complex guided TE waves. (a), (b) and (c) represents a proper complex waves, where (d),(e) and (f) represents improper complex waves 12
2.7 Real structure with $\varepsilon_r = 20$ and $d = 1.4mm$ 13
2.8 A line current source directed along y-direction over a grounded dielectric slab 14
2.9 Branch cut of the square root function $k_z = \sqrt{k_0^2 - k_x^2}$ in the complex k_x-plane. The rippled black solid lines are the branch cuts. . . 16
2.10 A closed path of integration which covers the entire upper half space, and intersects with the defined branch cut of the squared root function $k_z = f(k_x)$. Legend: torques line is the closed path of integration 17
2.11 New deformed path of integration, along which k_z is analytic. (a) the entire deformed path and (b) a magnified view of the deformed path of integration around the branch point. The function k_z is analytic on any arbitrary point over the new deformed path of integration, and the condition $\Im\{k_z\} \geq 0$ is met for the entire path of integration. 18
2.12 (a) Original path of integration in k_x plane and (b) the deformed path of integration around branch cut and branch point in the same plane. The path of integration is shown as a bold torques line. . . . 20
2.13 Path of Integration in the k_z plane (this is the deformed path of integration in k_x plane S after mapping to the k_z plane). 21
