A THESIS
SUBMITTED FOR THE AWARD OF
THE DEGREE OF Ph.D. IN GEOPHYSICS

Presented by

Hazem Abdallah Mahmoud El-Sayed
M.Sc. in Geophysics

To

**Department of Geophysics
Faculty of Science
Ain Shams University**

Under the Supervision of

Dr. Nasser M. H. Abu Ashour

Prof. of Geophysics
Geophysics Department
Faculty of Science
Ain Shams University

Dr. Ayman Shebl El-Sayed

Lecturer of Geophysics
Geophysics Department
Faculty of Science
Ain Shams University

**Cairo
(2020)**

ACKNOWLEDGEMENTS

First and above all, I would like to express my great thanks to "ALLAH" who supplied me with strength and patience to complete this work. "Thanks GOD".

Thanks to *Prof. Dr. Nasser M. Hassan Abou Ashour*, Professor of Geophysics, Faculty of Science, Ain Shams University for his acceptance of supervision and constant encouragements for the help he offered to us to complete this present work.

With deep gratitude and regards, I am deeply Indebted to *Dr. Ayman Shibl El-Sayed*, Lecturer of Geophysics, Geophysics Department, Faculty of Science, Ain Shams university for the direct supervision of this work and guidance during the preparation of through conducting this work, in addition to the valuable leading comments during most of the stages of progress of this thesis.

Thanks to **Eng. Ahmed Ghattas** for his reservoir engineering contribution to this work

Last but not least, grateful and true appreciation is expressed to my family for their help, patience and encouragement. No words of thanks and feelings are sufficient for my parents, my wife Yoana, my daughters "Mariam & Sophia". My Parents, Brother "Sherif" and Sister "Hadia", My father and Mother in law. My sister's in law. and My friends who supported me through inspiration of new ideas that I applied in this thesis.

ABSTRACT

Objectives and Aim of Study:

In this study, the author is trying to shed light on the petrophysical characteristics of the clastic and carbonate reservoirs in South Sannan concession, Western Desert, Egypt. In the light of geological, and geophysical studies to evaluate and improve its hydrocarbon potentialities of South Sannan Field, Western Desert, Egypt through the following topics:

1-Geological Investigations including:

Reviewing the general geological setting of the concerned area using subsurface data gathered from well logs, geophysical data and previously published literatures with the aid of isopach, lithofacies, structural contour maps as well as cross sections.

2-Petrophysical Investigations:

Including analyses of the available borehole data for petrophysical analyses of the Reservoir intervals in concern as well as identifying its textural and structural characteristics, including analysis and interpretation of the conventional logs and core data. Methods of the well logging analysis and Computerized statistical processing including different relationships and cross plots for the study intervals. These are through the following:

I-Wireline Log Analysis:

Including analysis and interpretation of the available conventional wireline logs such as Density, Neutron, Gamma Ray and Resistivity tools to achieve the following:

- A- Lithological and mineralogical identification of the studied interval.
- B- Determination of the petrophysical parameters (total and effective porosities, fluid saturations, shale and matrix contents and permeability index), by using wireline analysis and compare it with the core petrophysical parameters.
- C- Determining the reservoir characteristics (net sand, net pay, gas in-place and recoverable oil) for the hydrocarbon bearing zones of the studied intervals.
- D- Evaluating the lateral distribution of thickness and depth of the hydrocarbon net-pays and calculating the gas reserves within the investigated area.
- E- Advanced Wireline tools Processing and Interpretation including WBI, DSI

- F- Special Spectral Gamma Interpretations Building a Python Script for Shale Content volume.
- G- Petrophysical studies using FMI analysis
- H- Integrated Analysis by results combinations and MDT
- I- Integration with the Geomechanics Pore Pressure Prediction for the Area and Wellbore Stability.

II-Core Data Analysis:

Including the integration of the data deduced from core analysis to calibrate the wireline data in order to improve the data output from the data conventional analysis as following:

- A-Calibrate the core porosity to the wire line porosity
- B- Calibrate the Core Air Permeability to the wireline permeability.
- C- Calibrate the Core grain density to the wireline grain density.

3- The integration study and Combination of the Results with Advanced Evaluation:

Include the integration and combination of results between the petrophysical evaluation and reservoir evaluation deduced from the well logging analysis and those derived from the core data of the concerned formation to evaluate the reservoir intervals and study its impact on reserve estimation of the study area. Advanced Petrophysical Evaluation using Unconventional Petrophysical workflow to analysis the source rock and Reservoir Evaluation using Borehole wireline Pressure modular tool and Saturation height modelling .

4- Finally, the study will end by

Reservoir Modeling which represents geological & geophysical modeling that involves available geological data (lithology of successions, structures of the field & nature of depositional environments of successions), geophysical data (seismic & well logging), and petrophysical data from cores & cutting laboratory reports (Porosity & permeability, etc...) & engineering data (pressure test data).

Expected results

- 1) Realizing distribution of facies, reservoirs & petrophysical parameters of each unit.
- 2) Hydrocarbon reserves estimations.
- 3) Identification of areas of pay zones.
- 4) Detect high & low certainty locations.
- 5) Field development technical plan.

Abstract	
Approval sheet for submission	
List of contents	i
List of figures	v
List of tables	xiii
CHAPTER ONE: Geological Settings	1
1.1 Introduction	1
1.2 Subsurface Stratigraphy	1
1.2.1 Paleozoic	4
1.2.2 Mesozoic	5
1.2.3 Cenozoic	18
1.3 Structural Settings	20
1.4 Abu Gharadig Basin	22
1.5 Hydrocarbon Potentialities	25
1.5.1 Source Rocks	27
1.5.1.1 Source Rocks Maturation	28
1.5.2 Cap Rocks	28
1.5.3 Migration and Trapping	29
1.5.4 Reservoir Rocks	30
CHAPTER TWO: Methods of Well Logging Analysis	31
2.1 Formation Evaluation Technique	32
2.1.1 Determination of Formation Temperature	32
2.1.2 Correction Of The Mud Resistivity	33
2.1.3 Determination Of The Formation Water Resistivity	33
2.1.3.1 Water Resistivity from Temperature and Salinity (Using Chart) Gen-6 formerly Gen-9).....	33
2.1.3.2 The Picket’s Plot	34
2.1.3.3 Determination of Rw from Shale Properties	34
2.1.4 Measurements and Corrections of Rock Resistivities	36

Subject	Page number
2.1.4.1 Flushed Zone Resistivities (Rxo).....	36
2.1.4.2 Uninvaded Zone Resistivities.....	36
2.1.5 Shale Evaluation	37
2.1.5.1 Estimation of Shale Type.....	39
2.1.5.2 Determination of Shale Volume (Vsh).....	40
2.1.5.3 Shale Volume Correction.....	42
2.1.6 Clay Minerals Identification	43
2.1.7 Determination of Formation Porosity (ϕ).....	43
2.1.7.1 Correction of Porosity Tools.....	44
2.1.8 Determination of Fluid Saturation.....	49
2.1.8.1 Water Saturation Determination (Sw and Sxo).....	49
2.1.8.2 Hydrocarbon Saturation Determination (Sh).....	58
2.1.9 Lithologic Identification	59
2.1.9.1 Mineral Identification (M-N Plot).....	59
2.1.9.2 Density versus Neutron Crossplot.....	60
2.1.9.3 Simultaneous Equations.....	60
CHAPTER THREE: Core Analysis & Core Image Development	64
3.1 Core Porosity and Grain Density	68
3.2 Gas Permeability	69
3.3 Probe Permeability	70
3.4 Formation Resistivity Factor at Ambient Pressure	70
3.5 Formation Resistivity Factor at Overburden Pressure	72
3.6 Formation Resistivity Factor at Overburden Pressure	73
3.7 Formation Resistivity Index at Room Condition	74
3.8 Core Image Transformation to Resistivity Image	75
CHAPTER FOUR: Well Logging Data Interpretation	96
4.1 Introduction.....	96
4.2 Available Well Data.....	97
4.3 Evaluation of Petrophysical Properties of The Studied Well ...	99
4.3.1 Pre-Interpretation.....	99
4.3.2 Lithological Indication.....	102
4.3.2.1 Neutron-Density Cross Plot.....	102

Subject	Page number
4.3.2.2 M-N Crossplot.....	105
4.4 Combination between Core and Wireline Results	111
4.5 Final Evaluation of Petrophysical Properties and Hydrocarbon Potential.....	112
4.5.1 Litho-Saturation cross plots of SWS field.....	113
4.6 Final Horizontal Distribution of Petrophysical Parameters	121
4.7 Lithological Well Correlation	132
CHAPTER FIVE: Wellbore Geology Images	
Interpretation	139
5.1 Introduction	139
5.1.1 Depth matching	141
5.1.2 Image and Borehole Conditions	141
5.2.1.1 Dip picking and Sedimentary features	144
5.2.1.2 Structural Dip Interpretation	147
5.2.1.2.1 Structural Dip Determination	147
5.2.1.2.2 Identified Fractures	150
5.2.1.2.3 Faults and Fractures	153
5.2.1.2.4 GeoStress Orientation	154
5.2.1.3 Paleocurrent Orientation	155
5.2.1.4 Sedimentological Interpretation	158
5.2.1.5 Detailed Depositional Interpretation	165
CHAPTER SIX: Advanced Reservoir & Petrophysical	
Evaluation	176
6.1. Reservoir Evaluation	176
6.2. Formation Pressure	177
6.2.1. Typical Pressure Test	178
6.2.2 Quality Control	181
6.2.3. Mobility And Permeability Calculation	181
6.2.4 Formation Pressure Fluid Gradient Analysis	182
6.3. Saturation Hight Modeling	188
6.3.1. Data QC and Graphical Editing	188
6.3.1.1. Data Harmonization & Composite Well Creation.	188

Subject	Page number
6.3.2. Core Water Saturation Computation and editing	188
6.3.2.1. Capillary Pressure Stress Correction	189
6.3.3. Capillary Pressure Model	189
6.3.3.1. Methodology	190
6.3.3.2. Model Computation	191
6.3.4. Saturation Height Modeling	196
6.3.4.1. Water Saturation Computation in the Log Domain	196
6.3.4.2. Calculating Water Saturation	196
6.4. Unconventional Evaluation	196
6.5. Logging Responses and Application in Source Rock Evaluation	202
6.5.1. Gamma-Ray	206
6.5.2. Middle East and Unconventional Resources	206
6.6. Geo-Chemical Properties	210
6.7. Total Organic Carbon (TOC)	210
6.7.1. Kerogen Typing	211
6.7.2. Thermogenesis	213
6.7.3. Thermal Maturity	214
6.8. Hydrocarbon Source Rock Analysis	214
 CHAPTER SEVEN: Geomechanics Settings OF South Sanman Field.....	
7.1 Introduction	218
7.2 Pore Pressure Estimation & Calibration.....	219
7.3 Mechanical earth Model.....	231
7.3.1 Rock Properties.....	231
7.3.2 Elastic Properties.....	235
7.3.3 Static and Dynamic Mechanical Properties.....	235
7.4 Vertical Magnetude and Gradient.....	245
7.5 The borehole instability consequences.....	246
7.6 Minimum Horizontal Stress.....	247
7.7 Fracture Pressure and Safe Mud Weight.....	250
Summary and Conclusions.....	258
