The Therapeutic Effect of Bacteriophage on Multidrug Resistant Bacteria Causing Diabetic Foot Infection

A Thesis Submitted For
The Award of the Ph.D. Degree of Science Teacher Preparation (Botany)

By

Amira Mohamed Mahmoud Abd El-Hady

M.SC. degree in Science Teacher Preparation – Botany (2017)

Supervised By

Prof. Dr Mohamed Abdulaziz Fouad

Professor of Microbiology, Biological and Geological Sciences Department,
Faculty of Education, Ain Shams University

Prof. Dr. Khalid Abd El- Fattah El- Dougdoug

Professor of Virology, Department of Microbiology, Faculty of Agriculture,
Ain Shams University

Prof. Dr. Gamal Eldidamony Mohamed

Professor of Virology, Department of Botany and Microbiology, Faculty of
Science, Zagazig University

Prof. Dr. Eman Zakaria Gomaa

Professor of Microbiology, Biological and Geological Sciences Department,
Ain Shams University

2021

APPROVAL SHEET

Title.

**The Therapeutic Effect of Bacteriophag on Multidrug
Resistant Bacteria Causing Diabetic Foot Infection**

Name: Amira Mohamed Mahmoud Abd El-Hady

SUPERVISORS

APPROVED

Prof. Dr. Mohamed Abdulaziz Fouad

Professor of Microbiology, Biological and Geological
Sciences Department, Faculty of Education, Ain Shams
University.

Prof. Dr. Khalid Abd El- Fattah El- Doudoug

Professor of Virology, Microbiology Department, Faculty of
Agriculture, Ain Shams University.

Prof. Dr. Gamal Eldidamony Mohamed

Professor of Virology, Botany and Microbiology Department, Faculty
of Science, Zagazig University.

Prof. Dr Eman Zakaria Gomaa

Professor of Microbiology, Biological and Geological Sciences
Department, Faculty of Education, Ain Shams University.

ACKNOWLEDGMENT

First, I wish to offer my deep thanks to ALLAH for the support in every step which enabled me to overcome all the problems that faced me throughout the work.

I would like to express my deepest gratitude and my heartfelt thanks to Prof. Dr Mohamed Abdulaziz Fouad, Professor of Microbiology, Previous head of Biological and Geological Sciences Department, Faculty of Education, Ain Shams University, for supervising the whole work, his continuous encouragement and advice during the stages of this work. Sincere thanks are also due to his guidance and constructive critical reading of this manuscript.

It pleases me to offer special thanks to Prof. Dr. Khalid Abd El- Fatah El- Doudoug, Professor of Virology, Department of Microbiology, Faculty of Agriculture, Ain Shams University; for supervising the whole work. Sincere thanks are also for his continuous guidance and critical reviewing of his manuscript. His advice on both research as well as on my career have been priceless. I am grateful to him for his excellent direction in the completion of this work.

I would like to express my deepest gratitude and my heartfelt thanks to Prof. Dr. Gamal Eldidamony Mohamed, Professor of Virology, Botany and Microbiology Department, Faculty of Science, Zagazig University, for suggesting the point and supervising the whole work. Sincere thanks are also for him continuous guidance and critical reviewing of this manuscript. I am grateful to him for his excellent direction in the completion of this work.

I express my utmost ineptness to Prof. Dr. Eman Zakria Gomaa, Professor of Microbiology, Biological and Geological Sciences Department, Faculty of Education, Ain Shams University, for her continuous encouragement and constructive guidance throughout the practical work and criticism in reading the manuscript.

I am greatly indebted to Prof. Dr. Ehab AbdulRazik Ali, head of Biological and Geological Sciences Department, Faculty of Education, Ain Shams University, for his support in numerous ways, providing valuable facilities and continuous encouragement.

I am greatly indebted to Prof. Dr. Mohammed Hamed Abd Elaal previous head of Biological and Geological Sciences Department, Faculty of Education, Ain Shams University, for his support in numerous ways, providing valuable facilities and continuous encouragement.

Real thanks are also due to the staff members of the Biological and Geological Sciences Department, Faculty of Education, Ain Shams University for their help and co-operation.

Dedication

I am indebted to thank my mother, my father soul, my sisters, and my brothers for their continuous encouragement.

Title	Page
➤ List of tables	I
➤ List of figures	VI
➤ List of abbreviations	XIII
➤ Abstract	XVIII
1. Introduction	1
➤ Aim of the work	3
2. Review of literature	4-61
3. Materials and methods	62-101
I. materials	
a. Media	62
b. Buffers and solutions	65
c. Reagents	67
d. Markers	68
e. Primers	69
f. Antibiotics	70
II. Methods	
1. Collection of samples and microbial investigation	73
2. Sampling	73
3. Isolation of bacteria from diabetic foot patients	74
4. Identification of clinical bacterial isolates	75
5. Antibiotic susceptibility test for the clinical isolates	79
6. Confirmation the identification of selected highly multidrug clinical bacterial isolates by Vitek 2	82
7. Molecular identification of bacterial isolates using 16S rRNA gene analysis	83
8. Bacteriophage Sample Collection	87

8.1. Bacteriophage enrichment and isolation	87
8.2. Phage purification and Amplification	90
8.3. Preparation of high titer phages	91
9. Characterization of bacteriophages	91
9.1. Morphological characteristics of phages using Transmission Electron microscope	91
9.2. Biological properties of isolated phages	92
9.2.1. Determination of host range pattern of the phages	92
9.2.2. Phage adsorption rate	93
9.2.3 One-step growth curve	93
9.3. Physical characteristics of phages	94
9.3.1. Thermal stability	94
9.3.2. pH stability	94
9.3.3. Storage stability	95
10. Preparation of phage cocktail	95
11. Phage therapy in animal model	95
11.1. Lab animal	95
11.2. Toxicity testing of phage cocktail in rats	96
11.3. Induction of type1 diabetes	96
11.4. Creation of Diabetic wound	97
11.5. Experimental design	97
11.6. Measuring of glycemic parameters	98
11.7. Determining wound microbial load	99
11.8. Measuring of oxidant/ antioxidant activity	99
11.9. Rt-qPCR for wound gene expression	99
11.10. Histopathological examination for H&E and Masson blue	101

4. Experimental Results	102-224
1.Clinical characteristics of the diabetic foot patients	102
2.Isolation of bacteria from diabetic foot patients	104
3.Identification of clinical bacterial isolates	104
3.1. Identification of <i>Staphylococcus</i> isolates	106
3.2. Identification of <i>Enterococcus</i> isolates	107
3.3. Identification of <i>Pseudomonas</i> isolates	108
3.4. Identification of <i>Klebsiella</i> isolates	109
3.5. Identification of <i>E. coli</i> isolates	110
3.6. Identification of <i>Proteus</i> isolates	110
3.7. Identification of <i>Acinetobacter</i> isolates	111
3.8. Identification of <i>Enterobacter</i> isolates	112
4.Antibiotic resistance pattern of the isolates	123
5.Confirmation the identification of selected highly multidrug clinical bacterial isolates by Vitek 2	139
6. Molecular identification of multidrug resistant bacterial isolates using 16S rRNA gene analysis	147
7.Detection of virulent phages in sewage	169
7.1.Qualitative assay (spot test)	169
7.2. Quantitative assay (Plaque assay)	170
8.Characterization of isolated phages	173
8.1. Morphological properties of isolated phages	173
8.1.1. Plaque morphology	173
8.1.2. Morphological properties of phages using Transmission Electron microscopy	178
8.2.Biological characterization of isolated phages	181
8.2.1. Host range	181
8.2.2. The rate of adsorption for isolated phages	184
8.2.3.One step growth curve for isolated phages	187
8.3. Physical properties of phage isolates	191
8.3.1. Thermal stability	191

8.3.2. pH stability	194
8.3.3. Effect of storage temperature on the phages infectivity	197
9. Phage Therapy in animal model	205
9.1. Phage toxicity test in rats	205
9.2. Validation of type1 diabetic and diabetic wound onset	205
9.3. Effect of phage cocktail and ceftriaxone on wound healing	208
9.4. Effect of phage cocktail and ceftriaxone on bacterial load	213
9.5. Effect of phage cocktail and ceftriaxone on the expression of wound oxidative state	214
9.6. Effect of phage cocktail and ceftriaxone on the expression of wound healing markers and collagen deposition	217
9.7. Effect of phage cocktail and ceftriaxone on the expression of wound inflammatory and antinflammatory marker	220
9.8. Effect of phage cocktail and ceftriaxone on the histopathological picture of type 1 diabetic wound	223
