MONA MAGHRABY

Role of Diffusion Weighted MRI in Diagnosis of Breast Masses (BIRADS III and BIRADS IV)

Thesis

*Submitted for Partial Fulfillment of Master Degree
in Diagnostic and Interventional Radiology*

By

Shimaa Maghawry El Sayed

M.B.B.Ch., Ain Shams University

Under Supervision of

Prof. Dr. Mounir Sobhy Guirguis

Professor of Radio diagnosis

Faculty of Medicine, Ain Shams University

Dr. Ali Hagag Ali Nour El Deen

Lecturer of Radio diagnosis

Faculty of Medicine, Ain Shams University

Faculty of Medicine, Ain Shams University

2021

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

قَالَ

لَسْبَحَانَكَ لَا عِلْمَ لَنَا
إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

Acknowledgments

*First and foremost, I feel always indebted to **Allah** the Most Beneficent and Merciful.*

*I wish to express my deepest thanks, gratitude and appreciation to **Prof. Dr. Mounir Sobhy Guirguis**, Professor of Radio diagnosis, Faculty of Medicine, Ain Shams University, for his meticulous supervision, kind guidance, valuable instructions and generous help.*

*Special thanks are due to **Dr. Ali Hagag Ali Mour El Deen**, Lecturer of Radio diagnosis, Faculty of Medicine, Ain Shams University, for his sincere efforts, fruitful encouragement.*

I would like to express my hearty thanks to all my family for their support till this work was completed.

Shimaa Maghawry El Sayed

List of Contents

Title	Page No.
List of Tables.....	i
List of Figures	iv
List of Abbreviations.....	xii
Introduction	1
Aim of the Work	3
Review of Literature	
Pathological Considerations.....	4
MRI Imaging of the Breast	25
Patients and Methods.....	58
Results.....	63
Case Presentation	93
Discussion	120
Summary and Conclusion	130
References	133
Arabic Summary	

List of Tables

Table No.	Title	Page No.
Table (2-1):	Enhancement patterns of the breast lesions ...	35
Table (4-1):	Shows the range, mean and standard deviation of the patient's age.....	63
Table (4-2):	Shows the site and size of breast lesions	63
Table (4-3):	Shows the echogenicity, shape, margin and denisty of breast lesions.....	64
Table (4-4):	Shows the breast lesions which associated with secondary sign (edema or nipple retraction).....	65
Table (4-5):	Shows the breast lesions which associated with microcalcification.....	65
Table (4-6):	Shows the mammography and ultrasound BIRADS classification of the examined breast lesions.....	65
Table (4-7):	Shows the signal intensity of the breast lesions in T1WI and T2WI.....	66
Table (4-8):	Shows MRI enhancement characteristics of the breast lesions	67
Table (4-9):	Shows the type of time/signal intensity curve pattern of enhancement of breast lesions.	67
Table (4-10):	Shows characters of the breast lesions on DW images as restricted or faciliated diffusion and the mean, standard deviation and range of the ADC values of the breast lesions	68
Table (4-11):	Shows the MRI BIRADS classification of breast lesions.....	68

List of Tables *cont...*

Table No.	Title	Page No.
Table (4-12):	Shows the histopathological analysis of the breast lesions.....	69
Table (4-13):	Shows the mean, standard deviation and range of the patient's age regarding the benign and malignant breast lesions.	70
Table (4-14):	Shows the site and size of the breast lesions in correlation with the histopathology results.....	71
Table (4-15):	Shows the echogenicity, shape, margin and density of the breast lesions in correlation with the histopathology results.....	72
Table (4-16):	Shows the breast lesions which were associated with secondary sign and microcalcification or not.....	74
Table (4-17):	Shows the ultrasound and mammography BIRADS classification of the breast lesions in comparison to the histopathology	74
Table (4-18):	Table shows the signal intensity pattern of enhancement and time/signal intensity curve	76
Table (4-19):	Shows the characteristics of the breast lesions on DW images as well as the mean, range and standard deviation of the ADC values in benign and malignant breast lesions.....	78
Table (4-20):	Shows the MRI BIRADS classification of the breast lesions in correlation with histopathology	80

List of Tables *cont...*

Table No.	Title	Page No.
Table (4-21):	Correlation between age and size of the breast lesions to the ADC values.....	81
Table (4-22):	Shows the echogenicity of the breast lesions in relation to the ADC values.....	82
Table (4-23):	Shows the shape and margin of breast lesions in relation to the ADC values.....	83
Table (4-24):	Shows the breast lesions which associated with secondary sign and microcalcification or not with relation to the ADC values	85
Table (4-25):	Shows the density of breast lesions in relation to the ADC values	86
Table (4-26):	Shows the ultrasound and mammographic BIRADS classification of the breast lesions in relation to the ADC values and histopathology	87
Table (4-27):	Shows classification of the detected breast lesions according to their criteria on unenhanced breast MRI in relation to histopathology.	88
Table (4-28):	Shows the characters of the mass breast lesions on DW images in relation to histopathology.	88
Table (4-29):	Shows the type of time/signal curve pattern of enhancement in relation to the ADC values.....	89
Table (4-30):	Shows the ADC values of the breast lesions in relation to the MRI BIRADS classification and histopathology	90

List of Figures

Fig. No.	Title	Page No.
Fig. (1.1):	a & b-Microscopic and gross pictures of fibroadenoma, respectively.	11
Fig. (1.2):	Intermediate grade DCIS	14
Fig. (1.3):	a & b-Microscopic and gross pictures of IDC, respectively	16
Fig. (1.4):	Microscopic picture of Paget's disease	18
Fig. (2.1):	Double breast MRI coil	26
Fig. (2.2):	Typical set up for breast MRI.....	26
Fig. (2.3):	Pre-contrast T2 of a left breast simple cyst (<i>arrow</i>)	27
Fig. (2.4):	Pre-contrast T2 of a left breast speculated mass proved to be invasive ductal breast cancer (<i>arrow</i>)	28
Fig. (2.5):	Fat suppression makes enhancing lesions easier to appreciate.....	28
Fig. (2.6):	An example of the 3D FLASH sequence	29
Fig. (2.7):	MIP of subtracted images coronal view points out a nodular enhancement in the right breast (<i>arrow</i>).....	31
Fig. (2.8):	53-year-old woman with palpable nodule of right breast.....	32
Fig. (2.9):	Axial T2-weighted image of the breast.	33
Fig. (2.10):	Sagittal T2 –fat suppression MR image of the breast	33
Fig. (2.11):	Axillary LNs in sagittal T2 fat suppressed MRI.....	34
Fig. (2.12):	Contrast enhanced MRI subtraction image showing a non-mass like enhancement focal distribution in the right breast, proved to be lobular carcinoma in situ.....	37
Fig. (2.13):	Internal enhancement of focal mass by MRI	38
Fig. (2.14):	Malignant features	39

List of Figures cont...

Fig. No.	Title	Page No.
Fig. (2.15):	Three types of enhancement kinetics curves with breast MRI	40
Fig. (2.16):	Type III enhancement curve infiltrating ductal carcinoma in a 28-year-old woman	41
Fig. (2.17):	Diffusion of water molecules	43
Fig. (2.18):	Ductal carcinoma in situ (DCIS) in the left breast.....	45
Fig. (2.19):	Diagram shows how DW sequence combines 2 symmetric motion-probing gradient pulses into a single-shot SE T2-weighted sequence, one on either side of the 180 degree refocusing pulse	46
Fig. (2.20):	IDC with central necrosis	48
Fig. (2.21):	A 16-mm mass lesion of the right breast, which is hyperintense in (a), the axial high b-value (1000 s/mm ²) DW-MR image, and dark on (b), ADC maps representing low ADC values (restricted diffusion), characteristic of breast cancer.....	50
Fig. (2.22):	Invasive ductal carcinoma.....	51
Fig. (2.23):	A 53-year-old woman with ductal carcinoma in situ. The axial T1-weighted image shows segmentally distributed, asymmetric, iso-signal intensity, non-mass lesion in the left breast. B. The maximal intensity projection of a subtraction image shows heterogeneous clumpy enhancement in the left breast. C. The diffusion-weighted image shows the main lesion to be a high-signal intensity lesion. D. The axial plane apparent diffusion coefficient map shows a mixed green and yellow area and the apparent diffusion coefficient value of this breast tumor was 1.43 x10 ⁻³ mm ² /S	52

List of Figures cont...

Fig. No.	Title	Page No.
Fig. (2.24):	Fibroadenoma	52
Fig. (2.25):	False-negative result in a patient with invasive ductal carcinoma	53
Fig. (2.26):	Intraductal papilloma	56
Fig. (2.27):	Mucinous carcinoma	56
Fig. (2.28):	Fibroadenoma in the left breast.....	57
Fig. (4.1):	The mean ages of the patients in benign and malignant breast lesions	70
Fig. (4.2):	The echogenicity of breast lesions in correlation to the histopathology results	73
Fig. (4.3):	The shape and margin of the breast lesions in correlation to the histopathology results.....	73
Fig. (4.4):	The ultrasound and mammography BIRADS classification of the breast lesions in comparison to the histopathology.	75
Fig. (4.5):	The time/signal intensity curve pattern of enhancement of the breast lesions in correlation to the histopathology.	77
Fig. (4.6):	The characters of the breast lesions on DW images in correlation to the histopathology.....	79
Fig. (4.7):	ADC value of breast lesions in correlation with histopathology	79
Fig. (4.8):	MRI BIRADS classification of the breast lesions in correlation with the histopathology.....	80
Fig. (4.9):	Correlation between age and size to the ADC values.....	81
Fig. (4.10):	Relation between the ADC values and the echogenicity of the breast lesions.....	82
Fig. (4.11):	Relation between the ADC values and shape, margin of the breast lesions.....	84

List of Figures cont...

Fig. No.	Title	Page No.
Fig. (4.12):	The ADC values of the breast lesions in correlation to ultrasound and mammography BIRADS classification.....	87
Fig. (4.13):	Relation of the ADC values to the time/signal intensity curve of the breast lesions.....	89
Fig. (4.14):	Relation of the ADC values to the MRI BIRADS classification	91
Fig. (4.15):	Relation of the ADC values to the histopathology.....	91
Fig. (4.16):	Receiver operating characteristic curve (ROC) for ADC value to differentiate between BIRADS III and BIRADS IV.	92
Fig. (5.1):	Ultrasound showing hypoechoic well defined lesion in the left breast.	93
Fig. (5.2):	MRI axial images showing lower inner quadrant oval well defined mass lesion displaying lowT1 (A) and heterogenous (bright and intermediate) T2 (B).....	94
Fig. (5.3):	MRI Axial A) Dynamic THRIVE sequence	94
Fig. (5.4):	Diffusion sequence and post processing ADC map.....	95
Fig. (5.5):	Mammography showing well circumscribed mass with lucent halo in the right upper outer quadrant.	96
Fig. (5.6):	Complementary ultrasound showing right breast well defined hypoechoic mass.	96
Fig. (5.7):	MRI axial images well defined right upper outer mass lesion displaying low T1 (A) and bright T2 with fat saturation (B).	97
Fig. (5.8):	MRI axial A) Dynamic THRIVE sequence.....	97
Fig. (5.9):	Diffusion sequence and post processing ADC map.....	98

List of Figures cont...

Fig. No.	Title	Page No.
Fig. (5.10):	Mammography showing edematous breast changes as thickened skin, coarsening trabeculations and increased breast density.	99
Fig. (5.11):	Complementary ultrasound showing right breast ill defined hypoechoic irregular lump.	99
Fig. (5.12):	MRI axial images show right outer central ill defined lump of low T1 (A) and intermediate T2 with fat saturation (B)., associated with edematous changes.....	100
Fig. (5.13):	MRI sagittal A) Dynamic THRIVE sequence. B) Subtraction image Right outer central heterogenous ill defined lump with edematous breast changes. C) Time/signal intensity analysis of ROI	100
Fig. (5.14):	Diffusion sequence and post processing ADC map	101
Fig. (5.15):	Mammography showing left breast well-defined mixed density lesion, predominantly hyperdense.	102
Fig. (5.16):	Complementary ultrasound shows left breast well defined solid mass of mixed echogenicity.....	102
Fig. (5.17):	MRI axial images left breast well defined solid mass shows heterogenous hyperintense signal in STIR (A) and low signal in T2 (B).....	103
Fig. (5.18):	MRI Axial A) Dynamic THRIVE sequence. Left breast well defined homogenously enhanced mass. B) Time/signal intensity analysis of ROI. The mass shows washout curve pattern (Type III) with SI % of 270 %.....	103
