EVALUATING THE IMPACT OF USING NATURAL MATERIALS ON ENHANCING THERMAL PERFORMANCE OF BUILDINGS

A Thesis submitted in the Partial Fulfillment for the Requirement for Master
of Science Degree in Architectural Engineering

Submitted by:

Arch. Caroline Shoukry Hakim

Bachelor of Science in Architectural Engineering- 2016
(Architecture Engineering)

Supervised by:

Prof. Dr. Morad AbdelKader

*Professor of Architecture and
Environmental Control
Ain Shams University*

Prof. Dr. Laila Mohamed Khodeir

*Professor of Project Management and
Sustainable Development
Ain Shams University*

Cairo – (2021)

Prof. Dr. Laila Khodeir

*Professor of Project Management and
Sustainable Development*

Ain Shams University

.....

Date: ____/ ____/ 2021

Declaration

This thesis is submitted as a partial fulfillment of Master of Science in Architectural Engineering, Faculty of Engineering, Ain Shams University. This thesis's content is original. The author executed the work comprised in this thesis, and no part of it has been proposed for a degree or a qualification at any other scientific entity.

Student name

Arch. Caroline Shoukry Hakim

Signature

.....

Date: ____/____/2021

Research Data

Name: :Caroline Shoukry Hakim Shoukry
Date of Birth: : 3rd of September 1993
Place of Birth: : Cairo, Egypt.
Last academic degree: :B.Sc. Degree in Architectural Engineering
Field of specification: : Architectural Engineering
University issued the degree: : The higher institute in tenth of Ramadan
Graduation Year: : 2016
Current Job: : Architect, interior and exterior designer

Dedication

I dedicate this research to...

Praise to Allah, who has directed us through this, however the obstacles; and we would never get if Allah had not lead us.

My loving role models, great, caring and supportive “Father and Mother” who have been there for me all the time to encourage, lead me and make it possible and easier for me, they have never left my side for oneday but support me with a very special feeling of love, so I feel grateful for raising me and make me believe that everything is possible in this life and the obstacle can be turned to steps for greater success.

My fiance “Fady” for making me tried the kind of support and love that make me feel that there is a loving person who has my back there to encourage me in the hard times to make me believe in myself again. Thanks for being understanding person.

My very special, great and loving “Sisters”. I’m so grateful for having both of you in my life.

And

My Grand mother’s “teta”soul.

May 2021

Acknowledgement

I want to express my appreciation to my supportive supervisor and role model “Dr. Laila Khodeir” for standing by my side from day one till now, for her love, advices, patience with me and faith in my abilities in the hard time I didn’t believe in myself. Because he always understood, she kept encouraging me to beat any negative sound around me and to keep running towards my goal until I can catch it. Thanks for being that kind and noble. It is a delight to thank my instructor and leader who made this success possible, Prof. Dr. Morad Abdelkader for his guidance, helpful and valuable instructions and comments throughout the work on the thesis.

C. The Main Aim of the Research.....	XXX
D. Research Secondary Objectives.....	XXX
E. Methodology	XXX
F. Research Structure	XXXIII

1. Chapter One: Thermal Comfort and Manufacturing Insulation

Materials.....	1
1.1 Introduction	3
1.2 Thermal Performance of Buildings	3
1.2.1 The definition of thermal comfort	4
1.2.2 Factors affecting thermal comfort	6
1.2.3 The relation between achieving thermal comfort and productivity	7
1.2.4 The relation between achieving thermal comfort and energy consumption.....	9
1.2.4.1 Classification of the energy consumption in building sector	11
1.2.4.2 Energy and resources consumption by the building sector	12
1.2.4.3 Attempts of achieving thermal comfort positively	13
1.2.5 Effects of selecting building materials on energy consumption	18
1.3 Thermal insulation materials in buildings	20
1.3.1 Historical background of building insulation materials.....	22
1.3.2 The environmental analysis for selecting building insulation materials.....	26
1.3.2.1 Methodology of evaluation levels for building materials	27
1.3.2.2 The environmental analysis for building insulation materials from the sustainability perspective	29

1.3.2.3 The environmental evaluation of the most popular manufacturing building insulation materials	30
1.3.3 Characteristics of the most popular manufacturing insulation materials used in buildings	31
1.3.4 Selection criterion and factors affecting on insulation materials in buildings	35
1.3.5 Accidents happened as a result of applying manufacturing insulation materials.....	36
1.4 Challenges of using manufacturing insulation materials	38
1.4.1 Reaction to fire	38
1.4.2 Reaction to humidity and rains	40
1.4.3 Periodic maintenance	40
1.4.4 Economic aspect	41
1.4.5 Embodied energy and environment safety challenge	44
1.5 Findings	45
1.6 Conclusion Remarks	48
2. Chapter Two: Thermal Comfort and Natural Insulation Materials	50
2.1 Introduction	52
2.2 State of Natural Materials in the Market	53
2.3 Selection criterion of natural insulation materials	54
2.4 Impacts of applying natural insulation materials on the thermal comfort and energy consumption in buildings.....	54
2.4.1 Advantages of applying natural insulation materials	56
2.4.1.1 Thermal performance	56
2.4.1.2 Resources and energy conservation	57
2.4.1.3 Economic requirements	58
2.4.1.4 Acoustical performance	60
2.4.1.5 Workability	61
2.4.1.6 Impacts on occupants and environment	62
2.4.1.7 Waste control and recycling ability.....	62
2.4.2 Barriers of applying natural insulation materials.....	64
2.4.2.1 Reaction to fire.....	64

2.4.2.2 Reaction to humidity	65
2.4.3 The best location to apply insulation materials respect to thermal mass of the building	66
2.5 Findings	68
2.6 Concluding Remarks.....	73
3. Chapter Three: Analysis of National and International Examples.....	75
3.1 Introduction.....	78
3.2 Examples of impacts of using manufacturing insulation materials in buildings.....	79
3.2.1 Effects of using manufacturing insulation materials on buildings thermal behavior.....	79
3.2.1.1 Three Rivers Academy.....	80
3.2.2 Effects of using manufacturing insulation materials on environment and human health.....	82
3.2.2.1 Taiwan's NES-713 excrement on the popular manufacturing insulation materials	82
3.2.3 Effects of using manufacturing insulation materials on economic aspect.....	86
3.2.3.1 Evaluating insulation materials according to the physical characteristics and cost.....	86
3.2.3.2 Estimating the cost of insulation materials over the building's lifetime.....	89
3.3 Examples of using natural materials as insulation materials in traditional buildings.....	91
3.3.1 Using karshief stone in enhancing thermal performance in Siwa Oases buildings in Egypt.....	91
3.3.2 Using earth bag in buildings' insulating in the Mediterranean continental climate	94
3.3.3 Insulated straw bale house at solar haven in Mexico.....	96
3.3.4 Using natural stones internally and externally in buildings to enhance thermal performance.....	100
3.4 Examples of using developed natural insulation materials in buildings	101
3.4.1 Using natural insulation material panels and boards to enhance thermal performance in buildings.....	102
3.4.1.1 Using cotton stalk fibers boards as natural insulation material....	102

3.4.1.2 Use sheep wool and hemp boards as natural insulation materials.....	105
3.4.1.3 Developing performance of natural insulation material from rice straw	107
3.4.1.4 Apply coconut husk and bagasse boards to enhance thermal performance in buildings	108
3.4.1.5 Adding olive stone to cement lime mortar insulation panels.....	110
3.4.2 Examples of using natural insulation materials as main building materials or additive insulation material	114
3.4.2.1 Assessment of using recycled rice straw cement brick.....	114
3.4.2.2 Using ash blocks to enhance thermal performance in buildings..	117
3.4.2.3 Using ground olive stones as an additive to fired clay bricks to enhance thermal performance in buildings	118
3.4.2.4 Using oil palm fibers as a cement mortar replacement to enhance thermal performance in buildings	119
3.4.2.5 Using corn husk residual fibers and wheat straw blocks to enhance thermal performance in buildings	120
3.4.3 Examples of adding natural insulation materials to vacuum insulation walls	122
3.5 Findings	126
4. Chapter Four: Application Study: Interviews and Questionnaire Survey...	127
4.1 Introduction	131
4.2 Target Population and Expected Outcomes	131
4.3 Survey Process.....	133
4.3.1 Description of adopted Survey.....	133
4.3.2 Selection Criterion of Sample Population.....	133
4.3.3 Survey Main and Secondary Objectives.....	133
4.3.4 Survey Methodology.....	134
4.3.5 Survey Structure.....	134
4.3.6 Survey Sample Characteristics.....	136

4.4 Questionnaire Findings: Modern Buildings and Thermal Comfort Level in Egypt.....	139
4.4.1 Awareness of participants about thermal insulation materials	139
4.4.2 Percentage of Residential Buildings which apply Thermal Insulation Materials.....	140
4.4.3 Evaluating the satisfaction level in the current statues in buildings...	141
4.4.4 Estimating the electricity cost while using mechanical systems in buildings.....	142
4.5 Questionnaire Findings: The relationship between achieving thermal comfort and the productivity level	143
4.5.1 Impact of achieving thermal comfort indoor on productivity level....	143
4.5.2 Estimating the relationship between achieving thermal comfort and productivity level	144
4.5.3 Identifying the geographical direction	145
4.5.4 Systems used to achieve thermal comfort in spaces in hot seasons...	146
4.5.5 Measuring the satisfaction level of occupants with the non- insulated buildings	146
4.5.6 Evaluating the impacts of achieving thermal comfort	147
4.6 Questionnaire Findings: Evaluating the materials' selection criterion in mega projects in Egypt.....	148
4.6.1 Estimating the importance of applying thermal insulation materials in projects.....	148
4.6.2 The main barriers face applying thermal insulation materials in projects.....	149
4.6.3 Evaluating the motivation to apply thermal insulation materials in projects.....	150
4.6.4 Identifying the interaction towards using manufacturing insulation materials.....	151
4.6.5 Identifying the materials' selection criterion in projects.....	151
4.6.6 Evaluating barriers effect on applying natural insulation materials in buildings.....	152

4.6.7 The effectiveness of applying natural insulation materials.....	153
4.6.8 Projects stakeholder and decision makers' influencing level.....	154
4.6.9 Recommendations and Suggestions when applying Natural Insulation Materials.....	155
4.7 Personal Interviews.....	156
4.7.1 Validity of the Personal Interviews.....	156
4.7.2 Methodology of the Personal Interviews.....	156
4.7.3 List and Identification of Interviewees.....	156
4.7.4 Personal Interviews Main and Secondary Objectives.....	157
4.7.5 Interviews Findings: Awareness of the importance of using insulation materials in buildings.....	157
4.7.5.1 The awareness of clients with the importance of applying insulation materials in their buildings.....	158
4.7.5.2 The relationship between the project type, cost, time schedule and applying insulation materials.....	158
4.7.5.3 The percentage of projects applying insulation materials.....	159
4.7.5.4 The role of stakeholders and decision makers of projects in applying thermal insulation materials in projects in Egypt.....	160
4.7.5.5 The Priority of clients when selecting the project's materials..	161
4.7.6 Interview Findings: Awareness of the impacts of applying manufacturing insulation materials in projects.....	161
4.7.6.1 Types of manufacturing insulation materials applied in projects in Egypt	161
4.7.6.2 Benefits and defects of applying manufacturing insulation materials in projects in Egypt.....	162
4.7.7 Interview Findings: The impacts of applying natural insulation materials in projects	163
4.7.7.1 Applying natural insulation materials to enhance thermal performance in Egypt's buildings.....	163
