Title of Thesis

Assessing the Impact of the Integrated Biophilic Healing Interior Design Approach on Patient Satisfaction in Pediatric Cancer Healthcare Facilities

Key Words:

Healing environment; Biophilia; Cancer; Pediatric; Post Occupancy Evaluation

Summary:

This research develops biophilic healing interior design (BHID) guideline criteria to enhance satisfaction of patients in pediatric cancer healthcare facilities (PCHF). Given the growing attention to importance of healing environment effect on patient satisfaction and biophilic design effect on patients, this study extends the understanding of interior design effect on patient satisfaction and healing elucidating how both approaches interrelate in the form of a synergetic, holistic model adding a new dimension to research. Post occupancy evaluation is undertaken as the research method for this study to verify the biophilic healing interior design (BHID) guidelines aiding optimized healing. Furthermore, BHID guidelines specific to double-bed inpatient rooms are developed, which healthcare specialists and interior designers can follow through as a guide for designing with.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Dedication

I dedicate my thesis work to my loving parents, Gamal Ibrahim and Nehal El-Selehdar, for their constant time and effort they have invested in my sisters and myself ever since we were young. Both were a constant support system and role models for successful, persistent doctors of highest achievements. They taught me how to put effort in work, how to be dedicated, and how to never forget God in the process of learning, nonetheless the process of living. I would also like to thank them for the love of good deeds they have grown in each one of us, my 3 sisters and myself. This had a great influence on my specific choice of research topic and my life interests and passions in general. Thanks should also be bestowed on my loving husband and beautiful sisters as they were always supporting me and taking care of me in busy days working on this thesis. A very special and dear dedication to my grandmother's brother, Adel Darwishmay his soul rest in peace (RIP). He was the grandfather I never had the chance to have in my lifetime and he was the loving, sweetheart as he was and remains in our memories and of everyone who knew him. His wife Imelda (RIP) has been bravely fighting cancer for numerous years until earlier last year. She had the heart of a warrior and gratitude of a saint. My grandpa Adel has always set a good example for a patient, loving, and understanding supporter. He was a main influencer and teacher of how to deal with life's hardships, dedicating this to him does not serve him justice. For all my family members and friends who died from cancer, this is dedicated to you as the help I can offer now, the help that I never had the knowledge or chance of offering in your lifetime. With tremendous joy and satisfaction, I would like to dedicate this work to 57357 children, Abu El Reesh children, and any child or adult fighting cancer too. Too often we want to help with anything, and I have constantly had the trouble of not knowing how or in what form. This MSc thesis makes me more than happy to fulfil an urge I have always had. I have always been a firm believer with this hadith leading me in life. Prophet Muhammad (PBUH) said, "What actions are most excellent? To gladden the heart of human beings, to feed the hungry, to help the afflicted, to lighten the sorrow of the sorrowful, and to remove the sufferings of the injured." (Bukhari)

Acknowledgments

To start off with, I would like to attribute my ultimate achievement to God as He helped me achieve all I did in this work and helped provide me with the support I need in the form of supervisors, persistence, and personal strength. I would like to take this opportunity to express my deep gratitude to my Professor, Supervisor, and Advisor Prof. Hisham Gabr, for his continuous, dedicated support and his valuable feedback throughout my research journey. Moreover, much thanks extend to him for making me reach my maximum potential. This work would have not been possible without his guidance. Furthermore, I would like to extend my gratitude to my Professor and life mentor Dr. Laila Khodeir, for her tremendous effort and insightful contribution in the development of this research. Ever since I was an undergraduate student, Dr. Laila has supported me through the years teaching me and bettering me on both an academic and personal level. Moreover, I would also like to thank Dr. Dalia Abobakr for her valuable feedback, encouragement, and always being available when help was needed. Learning is not transferrable knowledge but rather acquiring skills and purposeful knowledge. I can confidently and proudly say that I have learned and produced something of value from my respectful Professors and advisors. Thank you from the bottom of my heart.

I would be remiss if I did not acknowledge Architect Roaa Ahmed, volunteer in 57357 Children's Cancer Hospital in Egypt, who was of major help in accessing the hospital, facilitating my visits, and helping provide my needs for this research aiding me reach my goal. I would like to thank the cancer children angels that were interviewed, helping me reach my research results and adding something beautiful to my soul. Much appreciation to my cousin Mariam El Safty who taught me how to deal with children according to her profession; this helped greatly in carrying out my interviews with children of young age making friends out of them before being interviewee respondents. A big thank you for the patients' parents, staff members, and volunteers that were cooperative in helping me carry out interviews and surveys, willing and keen to answer all questions with dedication wearing their hearts on their sleeves. A dear thank you to the important efforts of my sisters and close friends who supported me and believed in me throughout all these years of effort developing this research. Special thanks to my husband for his patience, understanding, and pushing me forward to bring the best out of me. This research would have not been done with this much love and keenness if not for the continuous and heartfelt prayers of my mother and father. Finally, a heartfelt thank you for my Aunt Imelda RIP, who was a cancer patient herself, for her enthusiasm she provided me when she knew my research topic and always checking on me and my progress.
