**Effect of Pap smear screening test on early  
detection of cancer cervix and short term nursing  
intervention among women using progesterone -  
only contraceptives**

***Thesis***

Submitted in Partial Fulfillment to get  
Master Degree in Obstetrics and Gynecological Nursing

*By*

***Hanaa Rashad Mahmoud***  
(B.Sc. N.)

**Supervisors**

***Prof. Dr. Shadia Abdel-Kader Hassan***

Professor and Head Department of Maternity and Newborn Health  
Faculty of Nursing  
Cairo University

***Prof. Dr. Atef Mohamad Mostafa Darwish***

Assistant Prof. of Obstetrics and Gynecology  
Faculty of Medicine  
Assiut University

***Dr. Shokria Adly Labeeb***

Lecturer of Community Health Nursing  
Faculty of Nursing  
Assiut University

**Faculty of Nursing  
Assiut University**

**2002**

## ACKNOWLEDGEMENTS

Praise is to *ALLAH*, the Merciful, the Compassionate for all the countless gifts I have been offered of these gifts; those assigned to give precious hands that enabled me to fulfill this study. Some of them will be cordially acknowledged.

Words are never enough to convey my sincere gratitude towards a great professor, tender mother and very close friend. With appreciation, I express my great indebtedness to *Prof. Dr. Shadia Abdel-Kader Hassan* Professor and Head of Maternity and Newborn Health Nursing Department, Faculty of Nursing, Cairo University, who generously offered her sincere guidance, constructive criticism, meticulous help, effective impetus and indispensable support through revising the text. The accomplishment of this work could have never reached its destination without her supervision.

I express my deepest thanks to *Dr. Atef Mohamad Mostafa Daruish*, Assistant Professor of Obstetrics and Gynecology, Faculty of Medicine, Assiut University, for his extra-ordinarily great help in idea design and support during the conduction of this work, his meticulous publication revision, creative comments and generous advice were essential for all milestones of development for this work.

I very much acknowledge *Dr. Shokria Labeeb*, Lecture of Public Health Department Faculty of Nursing, Assiut University, for her sincere directions and continuos support all through this study.

I would further like to thank. *Dr. Mohammed Galal*, Professor of Pathology, Faculty of Medicine, Assiut University, for his continuous help and support throughout the research.

Also, I would like to thank. *Dr. Sahar Najieb*, Lecturer of Obstetrics and Gynecology, Faculty of Nursing, Assiut University, for her great help and support.

Finally, I would like to extend my gratitude to the mothers, medical, technicians, colleagues and every kind hand that offered me assistance during the conduction of this work.

**Hanaa Rashad**

## LIST OF FIGURES

<i>No</i>	<i>Title</i>
1-	Distribution of women by their basic knowledge about pap smear and cervical cancer in both study and control groups.
2-	The role of Ectocervical Ayre's technique in the diagnosis of CIN in both study and control groups.
3-	The role of Endocervical Brush in the diagnosis of CIN in both study and control groups.
4-	Change in women's knowledge from the first visit to the second one in both study and control groups.
5-	Comparison between the effect of counselling and health education on the improvement of the women's knowledge about cervical cancer.

## LIST OF TABLES

<i>No</i>	<i>Title</i>	<i>Pages</i>
1-	Distribution of women by age and residence in both study and control group.	48
2-	Distribution of women by education and occupation in both study and control group.	50
3-	Distribution of women by age and duration of marriage in both study and control group.	51
4-	Distribution of women by menstrual history in both study and control group.	51
5-	Distribution of women in both study and control group by their basic knowledge about Pap smear and cervical cancer.	53
6-	Distribution of the study and control group by the clinical findings of the cervical examination.	54
7-	The positive case of CIN by pap smear in both study and control group	55
8-	The relation between methods of contraception and CIN in both study and control group.	56
9-	The relation between the duration of current methods of contraception and the incidence of CIN in both study and control group.	57
10-	Role of ectocervical Ayre's technique in the diagnosis of CIN in both study and control group.	58
11-	The role of endocervical brush in the diagnostic of CIN in both study and control groups.	59
12-	Socio-demographic characteristics versus positive cytologic findings by pap smear of women in both study and control group.	61
13-	Clinical finding of the cervix in the study and control group during six months of follow up.	62

14-	The change of the women's knowledge from the first visit to the second one in both study and control group.	64
15-	The comparison between the effect of counseling and health education on the improvement of the women's knowledge about cervical cancer.	65
16-	Previous contraceptive methods among women of the study group.	66
