In
Chemical Engineering

Approved by the
Examining Committee

Prof. Dr. Mahmoud Abdel Hakim El-Rifai, Thesis Main Advisor

Prof. Dr. Reem Sayed Ettouney, Advisor

Prof. Dr. Fatma Elzahraa Hanafy Ashour, Internal Examiner

Prof. Dr. Nagwa Abd-El-Hadi Naga El-Ibiary, External Examiner
Professor of Chemical Engineering, Chemical Engineering and Pilot Plant
Department, Engineering Research Division, National research center.

FACULTY OF ENGINEERING, CAIRO UNIVERSITY
GIZA, EGYPT
2019

Engineer's Name: Sarah Hisham Hassan Hussein Fahmy

Date of Birth: 12/9/1992

Nationality: Egyptian

E-mail: Sarahhisham85@gmail.com

Phone: 01117250929 - 01000762470

Address: El Haram, Giza.

Registration Date: 1/10/2014

Awarding Date: / /2019

Degree: Master of Science

Department: Chemical Engineering

Supervisors:

Prof. Dr. Mahmoud Abdel Hakim El-Rifai

Prof. Dr. Reem Sayed Ettouney

Prof. Dr. Guzine Ibrahim Ahmed El Diwani

Examiners:

Prof. Dr. Nagwa Abd-El-Hadi Naga El-Ibiary (External examiner),
Professor of Chemical Engineering, Chemical Engineering and
Pilot Plant Department, Engineering Research Division, National
research center.

Prof. Dr. Fatma Elzahraa Hanafy Ashour (Internal examiner)

Prof. Dr. Mahmoud Abdel Hakim El-Rifai (Thesis main advisor)

Prof. Dr. Reem Sayed Ettouney (advisor)

Title of Thesis:

"PREPARATION OF INORGANIC CATALYSTS FOR THE PRODUCTION OF BIO-JET FUEL BY HYDROCRACKING OF JATROPHA OIL"

Key Words:

Biojet fuel; catalytic hydrocracking; inorganic catalyst; nonedible oils; Jatropha oil.

Summary:

Biofuels such as biodiesel and biojet fuel are important sources of renewable energy, which will in the near future, replace petroleum fuels. Biofuels in general, can be produced from several raw agriculture materials. Currently, the most important biofuel is biojet fuel, as a partial replacement of jet fuel of petroleum origin. The most promising method for biojet fuel manufacture is the catalytic hydrocracking of a low cost raw vegetable oil such as non-edible Jatropha Oil. The type of product and its quality depend on the process conditions such as reaction time, temperature and the catalyst type, form, and amount. Heterogeneous catalysts play an important role in this process. The present thesis aims at the selection and preparation of an economic inorganic catalyst. This will then be used in the production of biojet fuel by hydrocracking of Jatropha oil conforming to ASTM specifications.

Disclaimer

I hereby declare that this thesis is my own original work and that no part of it has been submitted for a degree qualification at any other university or institute.

I further declare that I have appropriately acknowledged all sources used and have cited them in the references section.

Dedication

I dedicate my thesis to my Mother, my father and to my husband "Ahmed".

Acknowledgments

I want to thank God for all blessings he gave to me and for giving me the power and time to complete this work.

Special thanks to my dear professors Prof. Mahmoud Abdel Hakim El-Rifai, Prof. Reem Sayed Ettouny, Prof. Guzine Ibrahim Ahmed El Diwani, Prof. Nahed Kamal Attia and Dr. Shereen Kamel Amin for being my supervisors in this work. They were always beside me to give me continuous help and support in this research.

Also, I would like to thank my husband for his continuous support; for sharing with me difficult times and work phases; and discussion with him was so helpful.

Finally, I want to show my respect, appreciation, love and gratitude to my wonderful family: my mother, father and my younger sisters and brother.
