NITRIC OXIDE PRODUCTION IN CRITICALLY ILL CHILDREN

Thesis

*Submitted in Partial Fulfillment for
M.D. Degree (Pediatrics)*

By

AHMED ABD EL-FATTAH AZAB

*M.B., B.Ch., M.Sc. (Pediatrics)
Benha Faculty of Medicine
Zagazig University*

Supervisors

PROF. MOHAMED KAMEL RISK

*Professor of Pediatrics
Benha Faculty of Medicine
Zagazig University*

PROF. EL-SAYED A. AMER

*Assistant Professor of Pediatrics
Benha Faculty of Medicine
Zagazig University*

DR. REDA SAND ARAFA

*Lecturer of Pediatrics
Benha Faculty of Medicine
Zagazig University*

PROF. OSAMA SAAD EL-SHAER

*Professor of Clinical Pathology
Benha Faculty of Medicine
Zagazig University*

**BENHA FACULTY OF MEDICINE

ACKNOWLEDGEMENT

First, and foremost thanks to **GOD** for his help and powerful support to fulfill this work.

I would like to record my appreciation to the noble character and gentle behaviour of **PROF. DR. MOHAMED KAMEL RISK**, Prof. of Pediatrics, Benha Faculty of Medicine, Zagazig University, whose suggestions and supervision have been of great value in preparation of this thesis.

I would like also to express my deepest gratitude to **PROF. DR. EL-SAYED A. AMER**, Prof. of Pediatrics, Benha Faculty of Medicine, Zagazig University, for his guidance, creation, sincere help and kind supervision.

My sincere gratitude and my warm thanks should be expressed to **DR. REDA SAND ARAFA**, Lecturer of Pediatrics, Benha Faculty of Medicine, Zagazig University for his most valuable advice, guidance and continuous help throughout whole work.

I would never forget to express my deepest feelings and indebtedness to **PROF. DR. OSAMA SAAD EL-SHAER** Prof. of Clinical Pathology, Benha Faculty of Medicine, Zagazig University.

LIST OF ABBREVIATIONS

AIDS	Acquired immune deficiency syndrome.
ARDS	Adult respiratory distress syndrom.
CAVH	Continuous arterio-venous hemofiltration.
CCU	Critical care unit.
cGMP	Cyclic Guanyl monophosphate.
CNS	Central nervous system.
CRP	C-reactive protein.
CPAP	Continous positive airway pressure.
CPE	Cardio pulmonary edema.
CSF	Cerebrospinal fluid.
CVP	Central venous pressure
ECMO	Extra-corporeal membrane oxygenation.
ESR	Erythrocytic-sedemintation rate.
Et-CO2	End tidal CO2
ICP	Intra cranial pressure.
LVEDP	Left ventricular end diastolic pressure
MAP	Mean arterial pressure
NO	Nitric oxide
PAL-1	Plasminogen activator inhibitor-1
PAP	Pulmonary arterial pressure.
PEEP	Positive end expiratory pressure.
PCWP	Pulmonary capillary wedge pressure
TNF	Tumour necrosis factor
WBC	White blood cell.
UTI	Urinary tract infection.

LIST OF TABLES

Table No.	Title	Page No.
TABLES OF REVIEW		
1	Fasting glucose and insulin concentrations.	
2	Average adult body composition.	
3	Sputum gram stains.	
4	Fecal gram stains.	
5	Likelihood for blood culture isolates to be the source of infection versus a contaminant.	
6	Recommended tests on cerebrospinal fluid in the evaluation of meningitis.	
7	Interpretation of CSF findings.	
8	Recommended tests on pleural fluid in the evaluation of empyema.	
9	Interpretation of pleural fluid findings.	
10	Cardiovascular agents affecting after load.	
11	Relationship of tissue lactate to energy charge during experimental peritonitis.	
12	Antibiotic therapy in pediatric sepsis and septic shock.	
13	Inotropes, Vasopressors, and vasodilators in sepsis and septic shock.	
14	Cardiovascular and oxygen utilization variables.	
15	Prothrombotic factors, antithrombotic factors, and antifibrinolytic factors in sepsis.	
TABLES OF RESULTS		
1	Comparison between infection group and control group as regard plasma nitrite and nitrate (nmol/ml).	
2	Comparison between infection group and control group as regard mean and SD of acute illness score.	
3	Comparison between septicemic group and control group as regard plasma nitrite and nitrate (nmol/ml)	
4	Comparison between septicemic group and control group as regard acute illness score.	
5	Comparison between shock without sepsis group and control group as regard plasma nitrite and nitrate (nmol/ml).	
6	Comparison between shock without sepsis group and control group as regard acute illness score.	
7	Comparison between autoimmune group and control group as regard plasma nitrite and nitrate (nmol/ml).	

Table No.	Title	Page No.
TABLES OF RESULTS		
8	Comparison between autoimmune group and control group as regard acute illness score.	
9	Comparison between different studied groups as regard plasma nitrite, nitrate (nmol/ml).	
10	Comparison between different studied groups as regard acute illness score.	
11	Correlation coefficient (r) between plasma nitrite and nitrate concentration, CRP, score, total leukocytic count.	
12	Comparison between gram +ve and gram -ve organism as regard plasma nitrite, nitrate (nmol/ml).	
13	Comparison between gram +ve and gram -ve organism as regard acute illness score.	
14	Comparison between sex and plasma nitrite and nitrate (nmol/ml).	

LIST OF FIGURES

Fig. No.	Title	Page No.
FIGURES OF REVIEW		
1	Acute illness observational scales. Clinical evaluation of the well and sick child.	
2	Diagnosis of urinary tract infection in the febrile patients in the critical care unit.	
3	Pathogenesis of septic shock. Endotoxin, superantigens, and other stimuli lead to profusion of inflammatory host responses, which in turn can lead to multiple organ derangements.	
4	Relationship of oxygen delivery to survival in patients with septic shock.	
5	Physiological actions of nitric oxide.	
FIGURES OF RESULTS		
1	Comparison between infection group and control group as regard plasma nitrite and nitrate (nmol/ml).	
2	Comparison between infection group and control group as regard mean and SD of acute illness score.	
3	Comparison between septicemic group and control group as regard plasma nitrite and nitrate (nmol/ml)	
4	Comparison between septicemic group and control group as regard acute illness score.	
5	Comparison between shock without sepsis group and control group as regard plasma nitrite and nitrate (nmol/ml).	
6	Comparison between shock without sepsis group and control group as regard acute illness score.	
7	Comparison between autoimmune group and control group as regard plasma nitrite and nitrate (nmol/ml).	
8	Comparison between autoimmune group and control group as regard acute illness score.	
9	Comparison between different studied groups as regard plasma nitrite, nitrate (nmol/ml).	
10	Comparison between different studied groups as regard acute illness score.	
11	Correlation coefficient (r) between plasma nitrite and nitrate concentration, CRP, score, total leukocytic count.
