A NEW METHOD FOR DESIGN AND SIMULATION OF SPACE VEHICLE

By

Mohamed Mahmod Mohamed El-Farran

B.Sc Aerospace Engineering (1998)

Thesis Submitted To The Faculty Of Engineering At Cairo University
In Partial Fulfillment Of The Requirement For The Degree Of
Master Of Science
In
Aerospace Engineering

Under the supervision of

SAYED DESOUKI HASSAN

Professor Of Automatic Control and flight dynamics

GAMAL M. EL-BAYOUMI

Professor Of Automatic Control and flight dynamics

MOHAMED SAYED BAYOUMI

Ass. Professor Of Automatic Control and flight dynamics

FACULTY OF ENGINEERING, CAIRO UNIVERSITY,
GIZA, EGYPT
2003

NEW METHOD FOR DESIGN AND SIMULATION OF SPACE VEHICLE

By
Mohamed Mahmoed Mohamed El-Farran
B.Sc. Aerospace engineering (1998)

Thesis Submitted To The Faculty Of Engineering At Cairo University
In Partial Fulfillment Of The Requirement For The Degree Of
Master Of Science
In
Aerospace Engineering

Approved by
Examining Committee

Prof. Dr. Sayed Dessoki Hassan

Prof Dr. Gamal Mahmoed El-Bayoumi

Prof. Dr. Galal Bahgat Salam

Dr. Magdi Osman Tantawy

Table Of Contents

List Of Tables	**V**
List Of Figures	**VI**
List Of Symbols	**X**
Abstract	**XVI**
Chapter 1 Two-Dimensional Rocket Motion in Vacuum	**1**
Introduction	1
1 The Equations Of Motion	2
2 Rocket motion in free space	5
a. Tsiolkovsky's equation	6
b. Rocket parameters	9
c. The burnout range	13
3 Rocket motion in a homogeneous gravitational field	18
a. Vertical flight	19
b. Constant Pitch Angle	23
c. Gravity turns	31
Program Results	40
Chapter 2 The Multi-Stage Rocket	**44**
1 Nomenclature of the multi-stage rocket	44
2 The ideal velocity of the multi-stage rocket	49
3 Vertical ascents in a homogeneous gravitational field and in vacuum	59
a. The burnout velocity	59
b. The culmination altitude	62
c. Vertical ascent of a two-stage rocket	64
4. Parallel staging	69
Chapter 3 Solid Propellant Design	**72**
1. Introduction	72
2.Basic Assumptions	74
3.Propellant Grain	75
4.Propellant Combustion	80
5. Nozzle Theory	82
6.Rocket Motor Thrust and the Thrust Coefficient	90
7.Total Impulse	94
Characteristic Velocity	96
Specific Impulse	97
8.Chamber Pressure	98
9.Corrections for Actual Rocket Motors	104
Chamber Conditions	104
Nozzle Corrections	105
Corrections for Specific Impulse	107
10. Program Results	108

The Dimension Of Chamber: 108
Tubular Grain Shape Simulation (Case 1): 110
Propellant Burn Rate Empirical Data 112
Tubular Grain Shape Simulation (Case 2): 117
Tubular Grain Shape Simulation (Case 3): 123
Rod-Tube Grain Shape Simulation: 127
Case 4: One Rod-Tube Segment 127
Case 5: 2 Rod Tube segments (BATES) 127
11. Solid Propellant Program Steps 135

Chapter 4 Aerodynamic Model **137**
Introduction: 137
1 Normal Force CN: 138
a Body normal Force coefficients: 138
b. Wing and tail normal forces coefficient: 139
2 Axial force CX: 139
a. Wave drag: 139
For Fore body: 140
Conical Fore body: 140
Parabolic fore body and bodies of close to it in shape: 140
For Wings And Tails: 140
b. Viscous drag: 141
c. Induced drag: 141
d. Base drag: 141
e. Interference drag: 142
Total Axial with interference 142
3. Pitching moment: 142
4. Interference Factors In Normal Forces 143
a. Fin-body interference: 143
b. Correction for taper ratio : 144
c. Correction for boundary layer effect: 144
d. Correction for not remote wing: 145
e. Influence of flow stagnation: 145
f. Wing Tail Interference: 146
Correction for stagnation: 146
Correction for down wash: 147
Interference factors for tail movable area: 148
Total Normal Force Coefficient 148
5. Interface factors in moments 148
Total pitching moment coefficient (about the TIP) 149
6. Preliminary Method For Wingless Missiles Method: 150
7. Hypersonic Flow Aerodynamic Model 153
Calculating The Wave Drag Using Ref [25] Method: 153
8. Program Results 155
Case 1 Body-Wing-Tail Configuration at Mach No. 1.5 and 2: 156
Case 2 Body-Tail Configurations at Mach No. 1.5 and 2: 158

Chapter 5 Ballistic Missile Trajectories **160**
1.The boost phase 162

2.The Ballistic Phase: 166
a. The Orientation of the trajectory plane: 166
b. Trajectory geometry 168
c. Optimal flights 175
d. Time Of Flight 179
3. The re-entry phase 188
4. Nominal Ballistic Missile Ascent 188
4.1 γ_{final} initial Value 188
4.2 Optimal Thrust 189
Test Case 190

Chapter 6 Trajectory Design **193**
1 Introduction: 193
2 Propulsion: 194
2a Basics: 194
2b Staging: 196
3 Launching 200
4 Trajectory Dynamics 202
4a Equations of Motion 202
4b Gravitational Forces 207
4c Rocket Thrust 207
4d Aerodynamic Forces 209
4e Final Orbital Elements 211
5 Computation of the Nominal Ascent Trajectory 212
6 A Computed Test Case: ARIAN 4 215
7 Optimization of the Ascent 218
7a Solution for the Flat Earth 218
7b Improvement of the Nominal Trajectory 222
8 In-flight Guidance 225
9 The Guidance and Navigation System 226
10 Launch systems 230

Chapter 7 Atmospheric Re-Entry **231**
1 Introduction 231
2 Flight Equations 232
2a Equations of Motion 232
2b Aerodynamic Lift and Drag 233
2c Heating 235
3 Entry Corridors 237
3a. Parameters 237
3b Condition for Level Flight 239
3c The limit of Total Acceleration 240
3d The Limit of Rate of Heating 242
4 Ballistic Entry with No Lift 242
5 Guided Entry using Lift 244
5a Lift and the Guidance System 244
5b The Normal Trajectory 247
5c Feedback Guidance in the Upper Atmosphere 250
5d Feedback Guidance in the Lower Atmosphere 252

Chapter 8 Orbital Mechanics **258**
1 Introduction 258
2 The two-body problem 259
3 Orbital Elements and Reference Axes 263
4 Time in Orbit 270
5 Lambert's Time of Flight Theorem 275
6 Orbital Maneuvers 280
6a Coplanar Transfer Maneuvers 281
6b Injection into an Interplanetary Orbit 283
6c Plane Change to inject into a Geostationary Orbit 286
7 Patched Conics 287
7a Spheres of Influence 287
7b Time in Julian Days 288
7c A Solar Polar Mission 289
8 Numerical Integration of Orbits 293

Chapter 9 Satellite Launching **298**
1 Launch vehicle ascent trajectories 298
2 The injection of a satellite 300
2a General aspects of satellite injection 300
2b Depen. of orbital parameters on in-plane injection parameters 302
3 Launch vehicle performances 305
4 Orbit deviations due to injection errors 313
4a Small injection errors 314

Chapter 10 Space Vehicle Design **319**
1 Launchers Statically Study 319
2. Ballistic Missiles Statistical Study 325
3 Flow Chart of the Launcher Design Program 329
4 Structure Weight Estimator Eqn (1) 330
5. ISP Check Equation (2) 330
6. Number of Stages Calculation 330
7. Propulsion Module Structure Algorithm 330
8. Program Log File Sequence 331
9. Test Cases for the Design Program 333
10. Ballistic Missiles Design Program 340
10.1 Ballistic Missiles Test cases 340

Chapter 11 Conclusion and Recommendation **345**
1 Simulation Model conclusion 345
2 Design Model Conclusion 347
3 Recommendation 347

Appendix A Glossary Of All Short Range Ballistic Missiles **348**
Appendix B Hypersonic Flow in brief **351**
Appendix C Liquid Propellant Design **363**
Appendix D Suggestions to Build Launchers From Egypt Resources **369**
References **376**
