Roula Salim Abiad, B.D.S., MSD
Faculty of Dentistry
Beirut Arab University

Thesis

Submitted for the partial fulfillment of requirements for

Doctorate Degree
Endodontics.
Faculty of Dentistry, Cairo University

2010

قَالُوا سُبْحَانَكَ

لَا عِلْمَ لَنَا إِلَّا مَا عَلَّمْتَنَا

إِنَّكَ أَنْتَ الْعَلِيمُ الْحَكِيمُ

سورة البقرة

الآية رقم (٢٢)

Supervisors

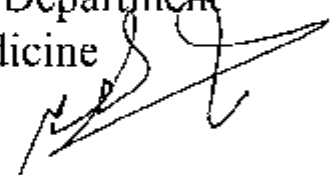

Professor Dr Salsabyl Mohamed Ibrahim

Professor of Endodontics, Endodontic Department
Faculty of Oral and Dental Medicine
Cairo University

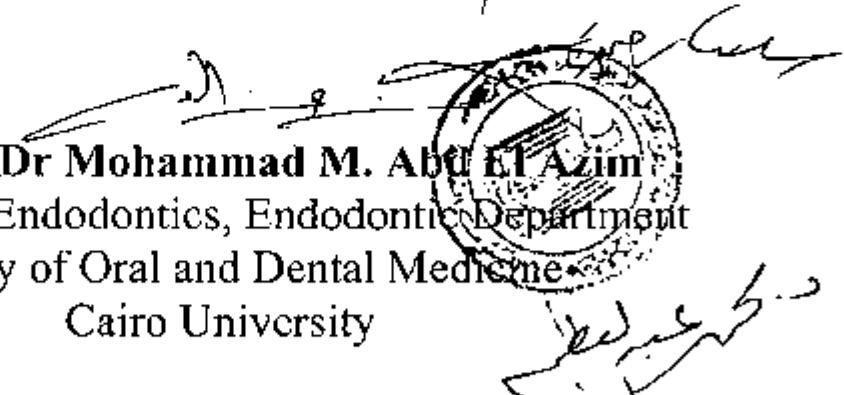

Professor Dr Medhat Abd El Rahman Kataia

Professor and Chairman, Endodontic Department
Faculty of Oral and Dental Medicine
Cairo University

Professor Dr Mohammad M. Abul El Azim

Professor of Endodontics, Endodontic Department
Faculty of Oral and Dental Medicine
Cairo University

"To The Wind beneath My Wings... To My Family"

Dedication

My deepest gratitude goes to my mother and father for their unflagging love and support throughout my life; this dissertation is simply impossible without them.

I am indebted to my sister Sawsan, if I can share my degree with someone in this world, it will her. Only her unsurpassed effort and help had made the accomplishment of this work possible

Acknowledgement

I owe my deepest gratitude to my supervisor, Prof. Dr. Salsabyl M. Ibrahim, whose encouragement, guidance and support from the initial to the final level enabled me to complete this thesis, she is a source of perpetual energy and enthusiasm, always accessible and willing to help and that motivated me in each step.

I am heartily thankful to Prof. Dr. Medhat A. Kataia, professor and chairman of endodontic of endodontic department, Faculty of oral and dental medicine, Cairo university; he has made available his support in a number of ways, and was constantly supportive whenever I encountered difficulties. It is an honor for me to work under his supervision.

Prof. Dr. Mohammad M. Abd El Azim, professor of endodontics, endodontic department, Faculty of oral and dental medicine, Cairo university, deserves a special thanks; working with him broadened my perspective in several aspects.

Many thanks go in particular to Dr Sultan Abdulaziz Al-Mubarak, Senior Clinical Scientist/Office of Research Affairs, KFSII, his advice and willingness to share his bright thoughts with me, were very fruitful for shaping up my ideas and research. His involvement with his originality is an asset I will benefit from for a long time to come.

I am deeply grateful to Ass. Prof. Dr. Samer AlJetaily, assistant professor of prosthodontics, dental school, King Saud University, and former chairman of dental department in SBAHC; for his unsurpassed help and support. His endless and continuous encouragement is greatly appreciated.

It is a pleasure to pay tribute also to Mr. Saeed A. Alghamdi, Chief of the clinical Laboratory-SBAHC, who kindly granted me his time and support to help with the microbiology work.

Countless thanks are extended to Ass. Prof. Dr. Hamad Alzoman, assistant professor of periodontology, dental school, King Saud University, and dental department in SBAHC; for his valuable assistance in this research.

I was delighted to work with: Malak Al-Mandeel (dental department receptionist, SBAHC, Samer Al Hamwi (dental lab supervisor, SBAHC), Shirley Mendoza (Dental assistant; SBAHC), and Elmar Cruz (microbiology lab technician) whose contribution to the research and the making of the thesis deserves special mention.

Lastly, I offer my regards and blessings to all of those who supported me in any respect during the completion of my thesis.

List of Contents

	Title	Page
	Introduction	1
	Review of Literature:	2
Part 1	1. Historical background of different devices used for studying blood flow;	3
	2. Considerations of other tests for pulp vitality;	5
	3. Laser Doppler flowmetry as a device used for studying blood flow in endodontics;	11
Part 2	1. Oral complications of diabetes: endodontic and periodontal complications; diagnosis, treatment and prognosis.	27
	2. Pathogenesis of periodontal diseases within diabetics	37
	3. Microbiological findings in endodontic infections of diabetic and nondiabetic patients	40
	4. Prevailed microorganisms in endodontic periodontal complications within diabetic patients;	43
	5. Root Canal Bacteria and antibiotic sensitivities	48
	Aim of study	54
	Materials and procedures:	55
Part 1	1. Preliminary examination, screening and selection of patients:	56

	2. Clinical examination of the selected cases	58
	3. Testing for pulp vitality:	62
	4. Radiographic examination:	64
	5. Statistical analysis:	65
Part 2	1. The selected anterior or posterior teeth fulfills the following:	66
	2. Grouping of the selected teeth for a specific line of treatment;	66
	3. Procedure for the selected line of treatment	67
	4. Microbiologic considerations of all selected cases :	72
	5. Methods of evaluation of success and failure	75
	6. Statistical analysis:	77
	Results	78
Part 1	1. Demographic data of both diabetic (DM) and non-diabetic (ND) patients, table 1 and 2.	78
	2. Preoperative tooth condition in diabetic (DM) and non diabetic (ND) patients:	80
PART 2	1. Treatment planning and grouping of teeth:	88
	2. Clinical follow up of treated teeth in DM and ND patients at the two periods of observations in the four group:	88
	3. Comparative radiographic interpretation	92

of pre- operative images and post-operative findings at the determined 3 and 6 months	
4. Association between tooth condition, clinical healing and radiographic success;	105
5. Microbiologic identification of prevalent microorganisms in all teeth.	108
6. Antibiotic sensitivity of the isolated strains of microorganisms	110
7. Antibiotic resistance of the isolated strains of microorganisms	110
Discussion	112
Summary and Conclusion	122
