# **Evaluation of Adhesive Capsulitis of the Shoulder with Fat-Suppressed T2-Weighted MRI: Association between Clinical Features and MRI Findings**

*Thesis*

Submitted for Partial Fulfillment of Master  
Degree in **Radiodiagnosis**

*By*

***Mariam Hussien Mohamed Khalifa***

*M.B.B.Ch.*

*Under Supervision of*

**Prof. Dr. Remon Zaher Elia**

*Assistant Professor of Radiodiagnosis  
Faculty of Medicine, Ain Shams University*

**Prof. Dr. Khalid Ahmed Mohamed Ali**

*Assistant Professor of Radiodiagnosis  
Faculty of Medicine, Ain Shams University*

**Prof. Dr. Fady Micheal Fahmi**

*Assistant Professor of Orthopedic Surgery  
Faculty of Medicine, Ain Shams University*

*Faculty of Medicine  
Ain Shams University*

**2022**

بِسْمِ اللَّهِ الرَّحْمَنِ الرَّحِيمِ

# قَالَ

سَبَّحَانَكَ لَا إِلَهَ إِلَّا مَا عَلَّمْتَنَا إِنَّكَ أَنْتَ  
الْعَلِيمُ الْعَظِيمُ

صدق الله العظيم

سورة البقرة الآية: ٣٢

# Acknowledgments

*First and foremost, I feel always indebted to **Allah** the Most Beneficent and Merciful.*

*I wish to express my deepest thanks, gratitude and appreciation to Prof. Dr. Remon Zaher Elia, Assistant Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University, for his meticulous supervision, kind guidance, valuable instructions and generous help.*

*Special thanks are due to Prof. Dr. Khalid Ahmed Mohamed Ali, Assistant Professor of Radiodiagnosis, Faculty of Medicine, Ain Shams University, for his sincere efforts, fruitful encouragement.*

*I am deeply thankful to Prof. Dr. Fady Micheal Fahmi, Assistant Professor of Orthopedic Surgery, Faculty of Medicine, Ain Shams University, for his great help, outstanding support, active participation and guidance.*

*I would like to express my hearty thanks to all my family for their support till this work was completed.*

*Last but not least my sincere thanks and appreciation to all patients participated in this study.*

**Mariam Hussien Mohamed Khalifa**

# List of Figures

Fig. No.	Title	Page No.
<b>Fig. 1:</b>	Showing the bony structures of the shoulder include the pectoral girdle and one arm bone.....	11
<b>Fig. 2:</b>	Diagram showing the anatomy of the shoulder joint ..	13
<b>Fig. 3:</b>	Showing Gleno-humeral ligaments and their attachments .....	14
<b>Fig. 4:</b>	Glenohumeral ligaments: Schematic illustration of the anterior ligaments of the shoulder.....	15
<b>Fig. 5:</b>	Showing the rotator cuff muscles and there attachments .....	18
<b>Fig. 6:</b>	Shoulder anatomy .....	19
<b>Fig. 7:</b>	Shoulder anatomy .....	20
<b>Fig. 8:</b>	Illustration showing a sagittal view of the shoulder of ligaments and rotator cuff muscles.....	21
<b>Fig. 9:</b>	Shows the origin of upper subscapular nerve from the posterior cord of brachial plexus and the lower subscapular nerve from the axillary nerve .....	24
<b>Fig. 10:</b>	Illustration shows the inferomedial location of the brachial plexus and axillary vessels in relationship to the coracoid process .....	24

## List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 11:</b>	Illustration of the posterior surface of the scapula shows the course of the suprascapular artery and nerve as they supply the supraspinatus and infraspinatus muscles, with the suprascapular nerve passing deep to the transverse scapular ligament through the suprascapular notch, and the artery passing superficially to the ligament. Compression at the level of the suprascapular notch affects both the supraspinatus and infraspinatus muscles, whereas compression at the spino glenoid notch affects only the infraspinatus muscle.....	24
<b>Fig. 12:</b>	Shows the posterior rotator cuff muscles with their blood supply and innervations .....	26
<b>Fig. 13:</b>	A diagram shows the blood supply of the shoulder (subclavian artery and vein).....	27
<b>Fig. 14:</b>	An axial T2-weighted image of the right shoulder at the level of the glenoid labrum showing the long head of the biceps tendon as it courses along the bicipital groove.....	28
<b>Fig. 15:</b>	An axial proton density fat-suppressed image in a 13-year-old boy demonstrates normal insertion of the subscapularis tendon (arrowheads) into the lesser tuberosity (solid arrow).....	30
<b>Fig. 16:</b>	A coronal proton-density fat-suppressed image of the right shoulder at the level of the supraspinatus muscle and the insertion of the conjoined tendon, a site that is very prone to rotator cuff injury .....	31

## List of Figures cont...

Fig. No.	Title	Page No.
----------	-------	----------

<b>Fig. 17:</b>	Coronal unenhanced fat-suppressed proton density-weighted MR images of a normal right shoulder .....	32
<b>Fig. 18:</b>	MRI coronal T1 (a), PD with fat suppression (b) and T2 (c) WI showing abnormal intermediate signal of the supraspinatus tendon in all pulse sequences with no disruption of its continuity (red arrows).....	33
<b>Fig. 19:</b>	Coronal fat -suppressed T2-weighted image showing normal shoulder anatomy . HH: humeral head.....	34
<b>Fig. 20:</b>	A sagittal proton-density image with fat suppression of the left shoulder at the level of the rotator cuff muscles. Although it takes some practice to evaluate the shoulder in the sagittal plane, the rotator cuff muscles are often best visualized on this view. recess.....	36
<b>Fig. 21:</b>	Oblique sagittal fat-suppressed T2- weighted imaging of right shoulder showing thickened coracohumeral ligament and obliteration of the subcoracoid fat triangle are observed (arrowheads) ....	37
<b>Fig. 22:</b>	A sagittal T1 -weighted MR image showing the normal anatomy of the shoulder (*for the clavicle).....	37
<b>Fig. 23:</b>	Sagittal fat -suppressed T2 weighted MR arthrogram showing the radiological anatomy of the rotator interval.....	38

## List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 24:</b>	Axial T2 –weighted MR arthrogram image at the level of the superior glenoid demonstrates a sublabral foramen or sublabral hole (white arrow) .....	41
<b>Fig. 25:</b>	Sagittal T2 –weighted MR arthrogram image showing the anatomy of normal rotator cuff muscles...	42
<b>Fig. 26:</b>	Normal anatomy of the ligaments arising from the coracoid process. Shallow oblique coronal T1-weighted MR arthrogram of the right shoulder shows normal ligaments arising from the coracoid.....	42
<b>Fig. 27:</b>	Sagittal T2- weighted MR arthrogram view showing gleno-humeral ligaments of the shoulder .....	43
<b>Fig. 28:</b>	Axial T2-weighted MR arthrogram image showing relation between the rotator cuff muscles and the MGHL.....	43
<b>Fig. 29:</b>	Normal coracoacromial ligament. Oblique coronal (a) and oblique sagittal proton density images (b) showing the coracoacromial ligament (arrows) as a homogeneous and thin hypointense structure attaching to the inferolateral aspect of the anterior acromion.....	44
<b>Fig. 30:</b>	Normal anatomy as depicted on coronal oblique T1-weighted magnetic resonance (MR) arthrographic obtained with fat saturation after intraarticular administration of dilute gadolinium compound .....	44

## List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 31:</b>	A, B. Full-thickness tear (A, arrow) at supraspinatus tendon insertion to the humerus on a coronal	

	oblique MR image has developed in the background of tendonosis (A, dashed arrow); the tear ends at the joint capsule; and there are some motion artifacts. The anteroposterior dimensions of such a tear (B, arrows) on sagittal oblique images are very important for the orthopedic surgeon.....	49
<b>Fig. 32:</b>	1.5 Tesla Philips Healthcare MRI machine .....	52
<b>Fig. 33:</b>	Shoulder magnetic resonance imaging planes .....	56
<b>Fig. 34:</b>	Shoulder orientation of scan planes for shoulder examination: a axial plane; b coronal oblique plane; c sagittal oblique plane; d ABER (abduction and external rotation) .....	58
<b>Fig. 35:</b>	Abduction and external rotation ( ABER position) .....	58
<b>Fig. 36:</b>	Pathogenesis and pathology of primary frozen shoulder in the left of the scheme, the pathological findings documented in the literature are listed. In the right, the possible concept of the pathogenesis of primary FS is shown.....	66
<b>Fig. 37:</b>	Diagram showing pathogenesis and clinical findings of frozen shoulder .....	69
<b>Fig. 38:</b>	Proposed cellular pathway for the activation of TGF- $\beta$ and PDGF, which in turn stimulate the capsular fibroblasts with resultant capsular hypertrophy and restricted motion.....	71

## List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 39:</b>	The left image : coronal fat suppressed PD-weighted MR image shows capsular thickening and edema (arrow), the right image : axial fat-suppressed PD-weighted MR image shows pericapsular edema (arrow) .....	77
<b>Fig. 40:</b>	(A) Coronal fat-suppressed proton density (PD) image at the level of axillary pouch shows edema of	

inferior glenohumeral ligament on both the humeral and glenoid aspects (arrows). (B) Sagittal fat-suppressed PD image shows anterior pericapsular edema (arrow). (C) Axial fat-suppressed PD image at the level of humeral neck shows fluid around the biceps tendon (arrow). (D) Sagittal T1-weighted image shows obliteration of fat in the subcoracoid triangle (asterisk)..... 78

**Fig. 41:** (A) Axial proton density (PD) fat-suppressed image shows the measurement of maximal thickness of the humeral (solid arrow) and glenoid portions (line arrow) of the anterior band of inferior glenohumeral ligament (IGHL). (B) Coronal PD fat-suppressed image shows the measurement of maximal thickness of the humeral (solid arrow) and glenoid portions (open arrow) of the IGHL at the midaxillary pouch at the level of glenohumeral joint. (C) Sagittal T1-weighted image shows the coracohumeral ligament (arrow). Normal fat in subcoracoid triangle (asterisk). (D) Coronal PD fat-suppressed image shows the measurement of maximal height and width of the axillary pouch ..... 80

# List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 42:</b>	Coronal oblique T2 and PD-fat sat showing increased capsular thickness and hyperintensity (edema) at axillary pouch .....	81
<b>Fig. 43:</b>	Coronal fat-suppressed T2 weighted MR arthrogram shows thickened axillary pouch of capsule with peri capsular edema .....	82
<b>Fig. 44:</b>	The coronal fat-suppressed T2-weighted image through the mid-glenoid demonstrates a thickened and edematous inferior glenohumeral ligament at the axillary pouch (arrow). Pericapsular edema is demonstrated inferior to the axillary pouch and at	

	the superior aspect of the glenohumeral joint (arrowhead) .....	83
<b>Fig. 45:</b>	Oblique coronal T2 weighted image of a 57-year-old man with clinically proven adhesive capsulitis. There is thickening of the axillary recess, which is only mildly hyperintense (white arrows) .....	84
<b>Fig. 46:</b>	The sagittal T2-weighted image shows replacement of the subcoracoid fat by intermediate signal soft tissue thickening (asterisk), with synovial and capsular thickening at the anterior inferior aspect of the glenohumeral joint (short arrow).....	86
<b>Fig. 47:</b>	T1 sagittal oblique MRI (left) shows complete obliteration of subcoracoid fat triangle, T2 fat-sat sagittal oblique MRI (right) shows inter mediate signal of rotator.....	86
<b>Fig. 48:</b>	Axial fat –suppressed T2-weighted MR image showing fluid at long head biceps tendon sheath (arrow) .....	88

## List of Figures cont...

Fig. No.	Title	Page No.
<b>Fig. 49:</b>	A53-year-old man with shoulder pain and quantitative measurement of adhesive capsulitis .....	89
<b>Fig. 50:</b>	Coronal fat-suppressed T2 weighted MRI images showing direct signs suggestive of frozen shoulder .....	90
<b>Fig. 51:</b>	A 61-year-old man with adhesive capsulitis of the shoulder. (A) MRI (coronal T1-weighted with gadolinium-chelate enhancement). The marked enhancement of the joint capsule and synovial membrane in the axillary recess, measured perpendicular to the adjacent cortex (panel A, white double arrow).....	90
<b>Fig. 52:</b>	Pie chart sex distribution among study group. ....	102
<b>Fig. 53:</b>	Bar chart pain distribution among study group. ....	104
